S27 Using IMS ETO with Shared Queues and VGR

Glenn Galler

VIEW

ETO was introduced in IMS V4.1 as a vehicle for providing dynamic terminal support in a single IMS system. With IMS Version 6, ETO was enhanced to work in a parallel sysplex environment with multiple IMS systems. This presentation considers the issues arising when ETO is used in an IMSplex with shared queues and VTAM generic resources. It also offers advice for achieving a successful ETO implementation in these environments.
