S84   Partition, Re-partition— How Do I Handle All These Partitions?
Rick Long

IMS V7 HALDB databases provide the ability to partition databases into partitions. Handling all those partitions now needs to be planned for and managed. This session discusses some of the issues associated with handling increased number of partitions and data sets. Some topics that are discussed include:

The re-partitioning process

Data set naming standards

Generating the VSAM Define Cluster commands from the RECONs

Moving a HALDB between IMS systems
