Session Abstract

C05   Implementing LE in an IMS Environment
Steve Nathan, Telcordia

IBM created LE (Language Environment) to standardize and simplify the application runtime environment. But it doesn't happen auto-magically. Ensuring that LE is set up and used properly is challenging - and even more challenging in a complex IMS environment. This session discusses LE setup and options that pertain to an IMS environment. Topics include runtime and initialization options and any differences in setting up IMS online, BMP, and batch environments.
