

TOC**INDEX****VIEW****E14 JDBC Access to IMS DB from DB2, CICS and WebSphere**
Kyle Charlet, IBM Silicon Valley Laboratory

This session discusses access to IMS databases using JDBC from WebSphere, DB2 and CICS on z/OS. It describes the implementation of the JDBC driver as a Java 2 Enterprise Edition Connector, including the Server Provider Interface, the XML deployment descriptor, and deployment in both managed and unmanaged server environments. It discusses the use of the driver as an Enterprise Java Bean, a DB2 stored procedure and a CICS application. This topic builds on information learned in E13, IMS Java Application Development.
