Session Abstract

E16   High Availability IMS Using TCP/IP
Suzie Wendler, IBM Dallas Advanced Technical Support

TCP/IP has evolved to become the accepted standard for networking. As a result, there is now an ever-increasing need to support interoperability over a TCP/IP network to access applications/data on host environments such as IMS. This session focuses on solutions that address generic routing and failover considerations in this environment. It also discusses the use of functions and capabilities that are available in both sysplex and non-sysplex configurations.
