E21   z/OS RRS Exploitation for IMS and the IMS e-business Connectors
Jack Yuan, IBM Silicon Valley Laboratory

The z/OS Resource Recovery Service (RRS) technology enables 2-phase commit support and is used in many areas of IMS and the IMS Tools. For example, with the IMS Connect and IMS Connector for Java, new RRS functions, in conjunction with IMS V8, will provide distributed 2-phase commit support. This can support IMS Connect/Connector environments where IMS and IMS Connect are in separate systems in a sysplex, and WebSphere is in a non-390 distributed environment. Also, fundamental RRS concepts and IMS RRS usage in various areas are introduced in this session.
