

TOC**INDEX****VIEW****H02 Hands-on Workshop: Enabling IBM Java and JDBC**

*Kyle Charlet, IBM Silicon Valley Laboratory, and Ken Blackman,
IBM Dallas Advanced Technical Support*

It's one thing to hear someone talk about Java applications that accesses IMS, but it's far more exciting to see for yourself. Attend this hands-on session and learn how to configure the new IMS Java Message Processing region to run Java applications. Along with configuring the region, you will run the Java IVP program and learn the process for creating DL/I database metadata.

Before attending this session, you should understand basic IMS Java concepts which can be gained by attending session E13, IMS Java Application Development.
