FusionWare Corporation
FusionWare Integration Server

IBM

Business Challenge

Businesses today are faced with implementing many differing components from legacy or non-relational systems into a streamlined solution, with limited budgets, skills and staff. The challenge is to integrate all the disparate sources of information into cohesive solutions without interrupting the day-to-day business operations.

Solution Description

The solution is the FusionWare Integration Server. The Integration Server connects to RDBMSs, MultiValue databases and unstructured data sources such as e-mail, text files and printer output files. The FusionWare Integration Server's IDE is forms- and wizards-based, allowing for very rapid development with almost no manual coding. Supplied adapters for MultiValue, iSeries RPG IV and iSeries DB2® make integration of these data sources seamless.

Value Proposition

Applications built using the FusionWare products access existing programs and data, exposing them as Web services without changing them. FusionWare products are based on standards for connectivity and data access, insuring that as systems and applications change throughout the organization, communication paths can be easily modified to embrace new technologies, by:

- Improving data access for your data consumers, by providing information in real-time from multiply data sources.

- Increasing productivity for internal data consumers.

- Allowing for fast development within the existing resources.

- Improving administrative costs.

FusionWare has years of experience integrating MultiValue, iSeries and other systems with the latest trends in IT solutions. We work with all the major products and technologies to deliver solutions that best fit your needs.

Company Description

FusionWare Corporation is a Oregon state-based software company that develops and markets line of business (LOB) data-access and connectivity products and associated services that directly address the requirements of companies with diverse legacy systems that need to develop new business processes to integrate and share data internally and externally.

IBM Segment

- Data Management

Business Function

- Data and System Integration

Target Industry

- Cross Industry
