ITGAIN
ITGAIN Solution Suite

IBM

Solution Description

Whether being used for online banking, flight bookings, insurance policies, warehouse administration, accounting or content management, the reliability, availability, and performance of IBM DB2 databases are of vital importance to companies. Developed with a keen understanding of the common challenges faced by IBM DB2 administrators, the ITGAIN Product Portfolio of database monitoring tools is designed to ensure maximum database optimization and improved performance of critical database operations.

Features & Benefits

The ITGAIN Product Portfolio is comprised of the following three components:

Speedgain for DB2 LUW Monitoring Suite

Enables DBAs to efficiently locate and solve problems within a database. With its on-board performance diagnostic tools, this component detects potential issues as they develop using historical analysis and trending identifying bottlenecks. Features include: alert functions, SQL tuning capabilities, and concrete diagnostic tools for fault analysis that offer options for improvement. Speedgain for DB2 LUW also features DB2PDB integration that allows detailed display of internal database transactions.

Speedgain Gateway Monitor

Harvests performance data from all aspects of an IBM DB2 Gateway connection - network, mainframe, and IBM DB2 connect Gateways. This data is distilled to provide a comprehensive analysis of the exact cause of the bottleneck or slow-down. The result provides the ability to quickly identify the root cause of a performance problem and implement the appropriate corrective actions.

J2U

Allows migration of data without putting tested business logic at risk. J2U offers full JCL functionality for the UNIX/Linux environment. It can easily migrate batch jobs from z/OS to UNIX and offers tremendous cost saving opportunities. Alternatively, migrating specific batch jobs via J2U can achieve a net reduction in peak mainframe overhead and realize cost savings by minimizing peak CPU cycles.

Value Proposition

With the ITGAIN portfolio, businesses can always be in tune with the current status of their databases. The solutions detect potential problems as they are developing and the use of diagnostic tools for fault analysis offer options for improvement. As a result, bottlenecks and idle times are minimized. The ITGAIN Product Portfolio provides a DBA the capability to optimize the performance of critical database operations saving time and increasing enterprise efficiency.

Company Description

ITGAIN is a leading IT service-provider offering comprehensive service in the selection and implementation of new software solutions, whether for maintenance or expansion of current applications. In the domain of databases, we are specialists in IBM DB2. Our services include everything from installation, migration, administration, tuning and training on all software platforms, to complete software solutions for business intelligence. Through the use of ITGAIN's services clients enjoy the use of software packages that are user-friendly and effectively meet their business needs.
