Misys

Electronic Health Records (EHR) Solutions

IBM

Business Challenge

The U.S. health care system is a complex environment represented by regulatory challenges, financial concerns, quality-of-care issues, and fragmented patient information dispersed across multiple points of care. Physicians and caregivers need a better business model that will deliver both productivity and profitability, while patients seek more control and more information on pricing and available care options.

Solution Description

By leveraging current technology—combining Misys software applications with IBM servers, storage technology, and access devices—physicians and healthcare professionals can discover answers to today's issues. The combination automates and optimizes many of the common functions associated with clinical workflows and routines at medical practices and institutions. Practice management solutions facilitate administrative tasks tied to scheduling, accounts receivable, statement processing, and referrals. Integrated EMR systems eliminate the inefficiencies associated with paper records and files to create a foundation for sharing critical patient data across multiple healthcare venues.

Value Proposition

Misys and IBM offer comprehensive, tested solutions with bundled pricing that integrate all system software, applications and hardware in ready-to-use packages. Satisfying federal, state and local Electronic Medical Information requirements, the solutions deliver compelling advantages that address the needs of physician practices, hospitals, laboratories, home care agencies, and other health care professionals. Beyond business and operating efficiencies, improvements in the quality of patient treatments, and creating connections that allow patient data to be shared across the continuum of care, these offerings also have the following features:

• Intuitive, easy-to-use interfaces for medical practitioners
• Scalability to match small-to-large deployments
• Seamless integration of practice management, EMR, and financial systems
• Implementation and training services to guide users

Company Description

Health care professionals dedicated to better outcomes turn to Misys Healthcare for answers, ideas and results that help manage the complexities of health care. Based on insights gained from 30 years of experience and relationships with more than 100 000 physicians and health care professionals, Misys has a unique ability to create easy-to-use software-based solutions and services that connect the health care community.
