A Business Partner Solution for the Cross Industry Sector

IBM FileNet Panagon to IBM FileNet P8 Rapid Migration

Document Systems, Incorporated (DSI)

EZmove2P8

Technology Description

DSI's EZmove2P8 offering consists of a toolkit plus customization services and is designed to expedite the migration of data from an existing IBM FileNet Panagon system to a new IBM FileNet P8 system. While simultaneously creating IBM FileNet Content Manager and IBM FileNet Image Manager document classes and property data, it supports the migration of documents and images, as well as associated metadata, from an existing Panagon Content Services or Panagon Image Services repository to a FileNet P8 repository.

Through a user friendly interface to a Visual Basic 6 program, the operator controls the export of Panagon data to an XML file and the Panagon documents and images to an associated folder. A Java import program subsequently scans the directories where the XML files are located, looking for input files. These input files are read and the documents/images indicated in them are loaded into FileNet P8.

Features & Benefits

- Existing toolkit; no need to 'roll your own'.
- No need to manually create FileNet P8 document classes and property data for FileNet P8 recipient repositories.
- Consulting support included in package.
- Mitigates migration risks through a tested process.

Value Proposition

EZmove2P8 shortens the elapsed time when migrating documents and images from Panagon to FileNet P8. It also allows a rapid upgrade from Panagon repositories based on optical juke boxes to FileNet P8 repositories on magnetic disk. Additionally, the included DSI consulting support frees your staff of the time-consuming task of developing a migration tool and procedures. A rapid migration allows you to more quickly benefit from the event driven architecture of FileNet P8.

IBM Segment

- Enterprise Content Management

Business Function

- Migration

Target Industry

- Cross Industry

Company Description

DSI is an established company whose core competencies are focused on the design and implementation of new IBM Enterprise Content Management (ECM) solutions. DSI also provides document conversion services (on-site or at DSI's facility).
