# Fairfax Data Systems, Inc.

*DB Export*

## Technology Description

Fairfax Data Systems' DB Export is an IBM FileNet Capture component that provides configurable settings collection that allows you to name a stored procedure that is called to perform database updates. The DB Export settings collection allows Capture administrators to provide a stored procedure which maps the stored procedure parameters to any of the document properties and index values in FileNet Capture.  The stored procedure is then executed, which will update the database tables and fields listed in the stored procedures, with the values which were mapped to the Capture document properties and index values.  If the stored procedure should fail, the document will enter an exception state for Capture operators to resolve.  The component returns a success/failure value for the database update that you can use in a FileNet Capture path to route the document to the next appropriate step.

## Features & Benefits

- Export of system-defined properties, such as document ID, page count and scan date.
- Export of indexed value from barcodes and/or manual indexing.
- Export data values from the index file used by file import (these values do not have to map to IBM FileNet P8 properties which allows you to import index values into an external index database that are not stored in the FileNet P8 document profile).
- Robust error handling and audit trails.

## Value Proposition

Manage your capture requirements by acquiring the DB Export tool.  Many organizations require the need to integrate their Enterprise Content Management (ECM) solution with 3$^{rd}$ party applications or custom applications which require information about documents being entered into an IBM FileNet P8 System.  The DB Export component allows FileNet Capture to forward the metadata of a document, both system and custom, to any 3$^{rd}$ party or custom database using standard ODBC connections.

## IBM Segment

- Enterprise Content Management

## Business Function

- Migration

## Target Industry

- Cross Industry

## Company Description

Fairfax Data Systems is a consulting and software development company specializing in providing quality information management and process management solutions using IBM ECM technologies.  Fairfax is an IBM Software ValueNet Business Partner with over 11 years of experience selling IBM FileNet P8 products and offers an array of products and services that help customers successfully deploy and support solutions built on the FileNet P8 platform.
