

## **Genus Technologies LLC**

*Genus Form Center*

---

### Technology Description

Genus Form Center provides a highly customizable enterprise solution for creating, filling, signing, submitting and managing electronic forms. Form Center's open Java and XML interfaces allow you to rapidly and economically develop forms-based applications. Tight integration with line of business applications, databases and content repositories is simply part of the Form Center package.

Genus Form Center leverages IBM WebSphere Portal, IBM Lotus Forms, and IBM Enterprise Content Management (IBM Content Manager or IBM FileNet P8) software.

By using powerful IBM ECM repositories, Genus Form Center speeds development and deployment of your forms applications. Storing forms in Content Manager or FileNet P8 offers a number of key advantages over other methods:

- Centralized storage and management.
- Security and managed access to filled out forms.
- Controlled versioning as forms change.
- Integration with records management systems.
- Fast, secure form search and retrieval using keywords or the text data in the form.

### Features & Benefits

- Manage form templates and versions of templates.
- Map form data to business application, database and content repository attributes.
- Customize form pre-processing (prior to filling) and post-processing (after form submittal).
- Conditionally manage form processing based on form information and user data.
- Customize and configure workflow events.

### IBM Segment

- Enterprise Content Management

### Business Function

- Form Creation

### Target Industry

- Cross Industry

## Value Proposition

Unlike less sophisticated, custom-built applications that dictate business activities, Genus Form Center supports the way the businesses do business. It provides inexpensive, configurable form-based applications that easily automate complicated business processes.

Compliance with increasingly stringent data privacy requirements, industry processes and government regulations is critical to business success. Genus Form Center reduces organizational risk. By saving data from completed forms in IBM ECM repositories as XML documents, Form Center, in concert with Content Manager's or FileNet P8's access security and audit capabilities, protects and controls sensitive data. Because individual form values map to document search properties, completed and in-process forms are quickly and easily located.

## Company Description

Lowry Technologies and MBS Technologies have joined to form Genus Technologies. Genus Technologies is a leader in enterprise content management capture, management/storage and delivery. Our solutions leverage IBM WebSphere Portal, Lotus Web Content Management, Lotus Forms, IBM Content Manager (including System i), IBM Content Manager OnDemand, IBM FileNet P8, IBM Business Process Management and Kofax scan/capture technologies to help organizations share information and work effectively.
