

A Business Partner Solution for the Cross Industry Sector

Automate the Deployment of the Parameter Settings of Your IBM FileNet P8 Projects

Logica IT Services

Configuration Deployment Console (CDC)

Technology Description

Logica's Configuration Deployment Console (CDC) is a tool that enhances IBM FileNet Content Manager, IBM FileNet Process Analyzer and IBM FileNet Business Process Manager. This Java tool allows the user to connect to a source IBM FileNet P8 3.5.x or 4.0.x environment and choose from a single interface the configuration elements of the environment to export into XML files. The user can then import these configuration elements with the same user interface, or import the elements by running the tool as a command-line program.

The main enhancement is the automation of many configuration steps, from the basic configurations to the deployment of workflows and subscriptions. It also avoids the problem of updating classes or definitions by using the Java API to create and update every selected object. While using the out-of-the-box export manifest to import objects, nothing will be done if the object already exists in the target environment but it will be updated by using the CDC.

Features & Benefits

- Export/import of marking sets.
- Export/import of choice lists/property templates/document classes with exception management (updates the component if it already exists in the target environment instead of throwing a uniqueness error).
- Export/import of the whole isolated region or of selected components.
- Export/import of IBM Component Manager configurations (required libraries and parameter settings, copy of required jars to target environment).
- Export/import of workflows, including the versioning of existing workflow definitions in target environment, the transfer of the workflow, and the creation or the update of the associated workflow subscriptions.

Value Proposition

When it comes to importing configurations, workflows or documents from an environment, many manipulations are needed involving different IBM FileNet P8 administration tools (Enterprise Manager, Process Configuration

IBM Segment

- Enterprise Content Management
