

IBM Informix OnLine 5

OnLine 5 is a robust and efficient entry-level OLTP server for small to mid-sized businesses. It will continue to be enhanced for the new generation of lightweight “internet appliance” style servers of 1 or 2 CPUs, as well as continuing to do duty in the thousands of customer and VAR applications that rely on it today. Version 5.11 will be released in December 2001, and will include support for all the latest Unix and Linux operating systems. In the future IBM customers can expect to see integration between OnLine 5 and IBM’s WebSphere and Visual Age product families.
