

Information Management Software Services Data Mover Tool

Highlights

- **Shorten migration time, reduce costs and free up resources to increase productivity**
- **Effectively migrate data environments with a high-speed data transfer built specifically for DB2 databases**
- **Change partitioning keys or dimensions of tables to allow re-partitioning or re-clustering of data**

Now you can upgrade and migrate your database environment more quickly using the new IBM Data Mover Tool. Upgrade your data, while taking advantage of the many features of IBM DB2® 9, like deep compression and table partitioning.

During the data upgrade process for your DB2 environment, this valuable tool can help automate and shorten migration time, reduce costs, and free up resources to increase productivity.

Now is the ideal time to engage IBM Software Services and upgrade to DB2 9 from DB2 v7 or DB2 v8.

Use the Data Mover Tool if:

- You urgently need to upgrade an unsupported version of DB2 (v7

or v8) or your Service Extension is about to expire

- You want to exploit the many features of DB2 9 and transform your database environment
- You need to realign your DB2 environment for future growth and innovation
- You seek more efficiency and lower development time and costs
- You understand the benefit of automating migration to save valuable IT staff time and increase productivity

The Data Mover Tool can Help

Instead of traditional version to version database migration, many IBM clients have chosen Software Services to upgrade their environment and migrate their data using the Data Mover Tool.

With the Data Mover Tool, Software Services has helped IBM clients cost effectively migrate their data environments with a high-speed data transfer built specifically for DB2 databases.

Key Features include:

- Ability to selectively migrate tables and time periods of data

- Consistent availability of old and new databases during migration
- Ability to redesign partition groups, number of partitions, tablespaces and page sizes
- Ability to change partitioning keys or dimensions of tables to allow re-partitioning or re-clustering of data
- Capacity for a robust auditing solution using the built-in checksum facility
