

Information Management Software Services

IBM InfoSphere Information Server Install Package Activity Sheet

Package Deliverables

- **Installation Plan**
 - **Successful Post-Installation Configuration**
 - **Knowledge transfer of InfoSphere standard practices**
 - **Install Checklist**
-

What is a Package Offering?

Information Management Implementation Packages are fixed scope, fixed-priced services to help IBM clients ensure that they have a technically sound and functional system framework necessary for successful development, deployment and management of their Information Management solution.

There are two packages available:

- 1) A one (1) component Install Package, where you are only installing one of the seven Information Server Components (DataStage and QualityStage count as a single component in this paradigm)
- 2) An up-to-seven component (full suite) Installation Package, where you can choose as many components as you require.

The **InfoSphere Information Server Install Package** consists of a fixed scoped project leveraging expert consultants, a repeatable proven process and standard collateral to reduce costs and project risks

and ensure seamless installation of the Information Server product suite. Avoid spending unnecessary time and money during software installation by leveraging the experts with the experience and knowledge you need. Information Management Software Services draws on years of deployment experience, proven methodologies, and standard practices to support a timely, reduced risk delivery of a successful product installation.

This package does not include Travel and Living expenses.

Tasks Involved

T1. Kickoff Meeting

- Review Package Service Description
- Review Sample Project Plan

T2. Preparation Phase

- Environment prerequisite checklist
- Installation Plan
- Cost effective environment configuration

T3. Software Installation
