IBM InfoSphere Metadata Workbench JumpStart Services

Highlights

- ***Accelerate the adoption of InfoSphere Metadata Workbench through an implementation approach tailored to meet your business needs***
- ***Learn to use the InfoSphere Metadata Workbench technology to its full potential with hands-on training and mentoring from IBM experts***
- ***Enhance your understanding of metadata and data flows across your organization***

Any Business Intelligence or Master Data Management solution is likely to include data that has been aggregated from operational systems, as well as manipulated for analytic purposes in data warehouses, data marts, and other similar data repositories. This disparate data from multiple sources when brought together can provide information that can be used to measure business performance and gain customer insight. However, connecting the dots and tracking this data through an end-to-end process can be challenging, and in order to truly have trusted information it is imperative that companies understand how their data repositories manage data, and how it is related as it moves across their various systems.

IBM InfoSphere Metadata Workbench provides the ability to see what happens to data as it moves across different source systems and can provide companies the confidence they need in their data in order to better manage their business.

What is the InfoSphere Metadata Workbench JumpStart Offering?

The goal of this service is to provide an accelerated adoption of InfoSphere's Metadata Workbench product through a mentored approach with your project team by working side by side with administrators, developers and users to:

- Populate a targeted data repository with data from different sources
- Establish links and troubleshoot potential data lineage issues
- Develop useful and reliable reports based on trusted information

Users will be exposed to querying capabilities on different aspects of the metadata while generating lineage reports that show the end-to-end data flow path with your data from applications, reports or data warehouses back to source systems, including what types of processing were performed on them along the way.

The InfoSphere Metadata Workbench JumpStart Service will include the following activities:

- Planning Session: Identification of the Project team and assets to be utilized. (Database tables, Datastage jobs, reports, external resources, etc)
- Basic configuration of InfoSphere Metadata Workbench
- Establishment of standard practices for implicit and explicit collection of metadata within InfoSphere's Metadata Workbench product
- Demonstration and hands-on mentoring of metadata loading for different types of external data assets and artifacts, as well as operational metadata

- Demonstration and hands-on mentoring of linking and stitching data assets, browsing, querying and reporting
- Project hand-off including instructions on how to administer and maintain the environment

A summary report of all activities performed during this service referencing standard practices will also be provided.

Your independence is our greatest success

That is the underlying theme to our delivery approach for the InfoSphere Metadata Workbench JumpStart Service. We believe that nothing is more important than transferring our knowledge to your organization. This provides you with long-term self-sufficiency through our mentored and parallel working approaches.

Engage Today

With a world-wide team of highly trained services professionals, the IBM Information Management Software Services team can help build your solution with confidence while assuring that the business needs and expectations of your organization are met. Our experts are ready to assist your organization with:

- Establishing project goals, expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership

Available for whatever the delivery approach your business requires, the IBM Information Management Software Services team will produce results quickly, and will help to put your project on the road to success.
