

IBM Information Management Software Services InfoSphere QualityStage Standard Practices Workshop

Highlights

- *Learn how to use QualityStage to standardize addresses, names, de-dupe multiple records in order to create the “trusted record” for any one “client”*
- *Provides you with IBM's Standard Practices around data flow and job design*
- *Learn IBM's standard project management practices for conducting QualityStage projects*
- *Work with IBM QualityStage experts to learn how to define success criteria for most QualityStage projects and applications*

With limited resources and budget, our Clients are often challenged to achieve a fast time to value for their software investments. Often their staff does not have the time to invest in becoming subject matter experts in all of the various technologies and lose out on opportunities to leverage valuable techniques and practices that accelerate implementation times and optimize the return on the solution investment. IBM workshops can accelerate your resources productivity and maximize the transfer of knowledge by working along side your teams to transfer IBM's standard practices and knowledge to your resources while working on actual projects.

What we offer

By engaging our IBM QualityStage experts you can achieve accelerated deployment and learn tips and techniques from the best in the industry on how to rapidly address any data quality issues. This transfer of knowledge will make your resources more self sufficient. The QualityStage workshop can help you identify business requirements, better plan projects and improve application design.

Prior to the workshop your completed prerequisite questionnaire allows IBM to have important background and context prior to the start of the workshop and it will help us tailor the workshop to meet your specific requirements.

The workshop starts with the discovery interview and data investigation. Taking the result of the discovery phase into account, the workshop discusses the standard practices based on the years of experiences in the field to help you develop the optimal application design. The workshop also determines if the standardization rules should be customized or overridden, how to solve the standardization issues, amount of time required for the work and the match specification based on the investigation results.

By understanding what your application should look like, you will have better insight into what is required for your project. The workshop covers the typical project cycle for QualityStage implementations and success criteria which will enable you create a more accurate and realistic project plan.

Activities & Deliverables

The InfoSphere QualityStage Standard Practices Workshop follows the approach outlined below:

Discovery Interviews

- Discussion of data sources
- Discuss and confirm business requirements
- Provide and assist in completing business requirements template(s)

Data Investigation

- Assist running investigation on relevant fields
- Assist analyzing the result
- Provide recommendations for additional investigation if necessary

Exploration phase

- Discuss application design applying standard practices
- Estimate the work required for standardization
- Assist in creating baseline match specification

Discussion of the IBM standard practices

- Planning
- Test strategy

Conclusion

- Workshop summary report
- Design recommendations

Your independence is our greatest success

That is the underlying theme to our delivery approach for the QualityStage Standard Practices Workshop. We believe that nothing is more important than transferring our knowledge to your organization. This provides you with long-term self-sufficiency through our mentored and parallel working approaches.

Engage today

With a world-wide team of highly trained services professionals, the IBM Information Management Software Services team can help build your solution with confidence while assuring that the business needs and expectations of your organization are met.

Our experts are ready to assist your organization with:

- Establishing project goals and expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership

Available for whatever the delivery approach your business requires, the IBM Information Management Software Services team will produce results quickly, and will help to put your project on the road to success.
