

## Information Management Software Services InfoSphere Streams Analytics Acceleration Offering

### Highlights

- ***Accelerate the time to value in building a “real-time” analytical application***
- ***Let IBM experts guide you through your first InfoSphere Streams implementation experience***
- ***Get a step closer to achieving your “smarter” business strategy***

Data volumes are expected to double every two years over the next decade. The global economic slowdown is resulting in organizations seeking to become more nimble with their operations and more innovative with their decisions. In the face of exploding data volumes and data types, these organizations are struggling to make “truly” real-time and effective decisions to gain competitive advantage. Existing tools and technologies that aid in decision making by Lines of Business are inefficient requiring data to be recorded first on a storage device followed by queries run after the fact to detect actionable insights.

Savvy businesses are quickly realizing that the time lost and data sources ignored in this process leads to

missed opportunities that could be the difference between success and failure.

InfoSphere Streams addresses this gap by providing a state of the art platform to run in-motion analytics on a wide variety of relational and non-relational data types and to support very powerful analytics with exceptional performance. The runtime environment can seamlessly scale from a single server to thousands of nodes.

### **InfoSphere Streams Analytics Acceleration Services Offering Overview**

The objective of this Information Management Software Services Offering is to build an application addressing a specific contained, and well defined business case leveraging IBM’s InfoSphere Streams technology. The main goal of the Service is to get you up and running as quickly as possible with the technology in a non production environment. Our IBM experts will help you chose an appropriate business case as the foundation of this accelerated services delivery.

The InfoSphere Streams Acceleration offering is delivered through an information sharing and knowledge-transfer approach, accompanied with hands-on expertise. The offering encompasses the following phases with corresponding output deliverables:

#### **Project Planning**

- After a review of the scope and project approach, a project plan, and a scope definition document will be created and delivered

#### **Design and Build**

- The design and development of the defined application will be completed

#### **Test**

- The application will be tested with a sample data set. An application manual describing the final solution will also be produced

#### **Conclusion**

- Project hand-off activities will take place, accompanied by the delivery of a next-step recommendations report

### **Your independence is our greatest success**

That is the underlying theme to our delivery approach for the InfoSphere Streams Analytics Acceleration Offering. We believe that nothing is more important than transferring our knowledge to your organization. This provides you with long-term self-sufficiency through our mentored and parallel working approaches.

### **Engage Today**

With a world-wide team of highly trained services professionals, the Information Management Software Services teams can help build your solution with confidence while assuring that the business needs and expectations of your organization are met. Our experts are ready to assist your organization with:

- Establishing project goals, expectations
- Maximizing the return on your investment
- Reducing project delivery times, complexity and risk through the delivery of proven offerings
- Reducing total cost of ownership

Available for whatever the delivery approach your business requires, the IBM Information Management Software Services team will produce results quickly, and will help to put your project on the road to success.
