Maximo Anywhere

A single mobile platform for your entire enterprise portfolio

Todays' mobility requirements include a mandate of flexible technologies that meet the unique needs of Maximo® clients across many different industries. Maximo Anywhere leverages IBM's MobileFirst technology, which has earned IBM a leading position in Gartner's Magic Quadrant for Mobile Application Development Platforms.

Highlights:

- Maximo Anywhere is built upon IBM's MobileFirst Platform *(formerly IBM Worklight®)*

- Reduce costs with a single platform for your entire enterprise portfolio including Maximo, TRIRIGA®, Industry Solutions, etc.

- Maximo Anywhere provides ready-made functional applications in addition to an extensible platform for custom app development

- No need to standardize on devices; MobileFirst supports Android, iOS and Windows

Applications and functionality

- Work execution application
  - Receive work
  - Review planned details, materials, labor, tools, task details
  - Feed data such as actual materials, labor, tools back into Maximo

Maximo Anywhere services and support

Services

Maximo Anywhere applications are highly configurable, offering flexibility in adapting them to the unique needs and expectations of the clients' mobile community.

Initial Maximo Anywhere installation and configuration can be performed by any services team, but time to value is best achieved thru engagement with seasoned and skilled Anywhere developers who also know Maximo. Clients have several installation/configuration services options including Maximo Lab Services, GBS, GTS, and authorized IBM Business Partners.

IBM's Maximo services team has deep Maximo domain expertise among its mobile developers, which provides them an advantage in delivering faster and more efficiently. While the core Maximo development team continues to develop and release mobile applications, many clients will demand their mobile experience aligns with their unique business models, operating processes and functional requirements. Our Maximo Anywhere mobile developers can take a generic out-of-the-box Maximo mobile app and transform it into an operation-critical application quickly and efficiently.

Support

IBM's digital support tools offer submission and tracking of issues and problems through the Service Request on-line tool, FAQs and answers, patches/fixes for download, troubleshooting guidance, etc.

For more information on MobileFirst Application Development

The Internet of Things Maximo services team offers on-demand billable services for comprehensive or supplemental implementation, configuration, and application development support.
