## Highlights:

- Accelerate your time to value and return on investment on your PureData System for Analytics Replication technology
  - Deploy the foundation for your enterprise disaster recovery initiative
  - Decrease risk to your enterprise
- 

# IBM PureData System for Analytics Replication QuickStart

## *Accelerate your time to value*

Analytic workloads have become mission-critical applications, and many clients now demand the infrastructure to support reliable disaster recovery, concurrent multi-site access, and load balancing between data centers. Regulatory requirements apply additional pressure. In response to the requirements, many enterprises develop and deploy custom disaster recovery solutions. Ultimately, these clients desire a complete disaster recovery solution that can be deployed quickly, yields immediate value, and makes minimal demands on scarce technical resources.

IBM® PureData® System for Analytics Replication services provide asynchronous replication for disaster recovery and concurrent multi-site access. Replication protects against data loss by synchronizing data on a primary system with one or more target systems.

Our experts deliver the technical leadership and expertise to build your disaster recovery foundation and ensure that the IBM PureData System for Analytics Replication Solution is properly implemented.

## Overview

The IBM PureData System for Analytics Replication QuickStart offering allows for a smooth transition and adoption of this replication capability. The objective is to get you up and running quickly with your first deployment of the IBM PureData System for Analytics Replication solution in order to address the critical first step towards your enterprise-level disaster recovery needs.

## This offering provides:

1. Review the establishment of an end to end high performance connectivity between the appliances and the replication log servers (*PTS or persistent transport systems*) through a wide area network

2. Installation and configuration of the PureData System for Analytics Replication software and hardware solution from one PureData System for Analytics source to one target
3. Enablement on the PureData System for Analytics Replication solution
4. Planning workshop to document disaster and recovery scenarios based on your requirements

The output of this engagement will provide the foundation for your enterprise replication deployment to support your disaster recovery and workload distribution requirements

## About IBM Analytics Services

The Analytics Services organization provides expert services exclusively focused on the IBM Analytics product portfolio. Our depth of experience and extensive proven practices help clients mitigate risks, raise the quality of their implementations and build valuable skills. We have provided guidance, advice, reviews, assessments and assistance to thousands of clients around the world enabling them to maximize the return on investment for both their on premise and cloud based analytics solutions.
