## Highlights:

- Full range of offerings for on premise, cloud and hybrid solutions
  - Deep technical expertise available from a world-wide organization
  - Enabling you to use our solutions to be disrupters in your industry
- 

# Data Integration and Governance Services

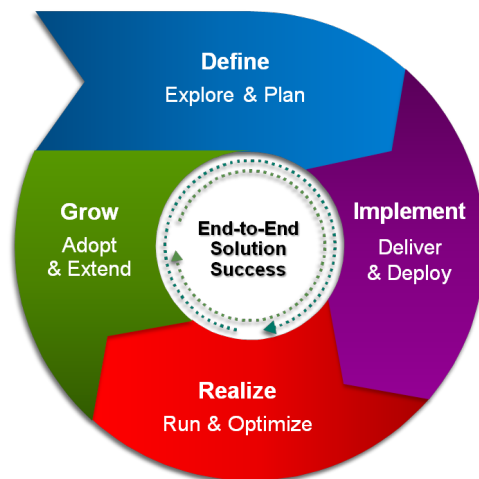

*For the lifetime of your data*

Data integration and governance solutions from IBM can help you discover, enrich, integrate and manage data over its lifetime. The design-once, run-anywhere simplicity promotes efficient operations even as your environment evolves and scales. And with self-service and IT-managed capabilities, anyone from data scientists to business users can access fit-for-purpose data.

We understand that integrating IBM's powerful Data integration and governance solutions into your business as quickly as possible is a priority. Our skilled and knowledgeable IBM Analytics Services experts are ready to help you be successful. We can maximize the value of your technology investment and address your critical business needs.

## Services lifecycle

Our solution based services portfolio includes flexible, end-to-end services that are designed to help drive positive results. The portfolio delivers value in all four core elements of your solution lifecycle: define, implement, realize and grow.

## What we offer

IBM Analytics Services offers a wide range of offerings to expedite your success across all the technologies in the data integration and governance portfolio.

Whether you are working with IBM InfoSphere® Information Server to understand, cleanse and monitor data or you are creating a single view of your client, patient, supplier or partner using IBM InfoSphere Master Data Management, our services experts are ready to work alongside your team to share our knowledge and best practices to make your solution successful.

### Deployment services:

When you are ready to accelerate and define your vision and strategy, offerings such as our architecture planning and roadmap workshop allow us to assist you in the critical first step of articulating, designing and planning the implementation of your solution to help ensure you will achieve the right outcomes.

In order to execute on your well-developed plan, we have a vast range of implementation offerings, whether your solution is on premise, in the cloud or a hybrid model. From our 50 hour Jump Start offering, designed to provide our fastest time to value, through to our full implementation offerings, we can help you take your solution successfully into production. In addition, we have a full selection of migration, upgrade and managed service offerings that our experts can discuss with you based on your needs.

### Post-deployment services:

After your solution is up and running we can focus on optimization so that you can rest assured that you are getting the best possible performance. Our performance analysis and HealthCheck family of offerings are designed to ensure you are optimizing the return on your software investment.

Then, as your organization starts to realize the value of your solutions, we have a number of services offerings to increase solution adoption and help you derive new value for your business.

## Engage

Reach out to the IBM Analytics Services team to get started or for more information on our services offerings. Simply complete our [online contact form](#) and a member of our team will contact you to discuss your business needs.
