Perspective of Wachovia and its Retail Bank

Business strategies that drive our need for services orientation

Where we have been and where we are with SOA

Lessons learned in the journey so far

Challenges we see ahead

Wachovia in perspective

Diversified scale businesses

2005 Segment Earnings* – \$6.8 billion

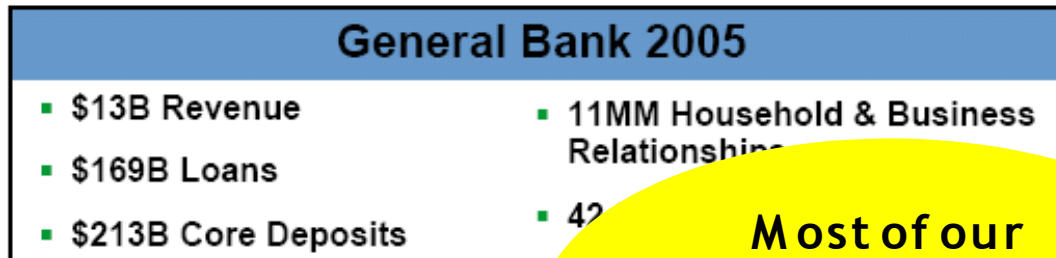

- General Bank has grown earnings at a 17% CAGR since 1Q02
- Retail and Small Business accounts for 63% of General Bank's earnings

**Segment earnings excludes merger and restructuring charges.*

GOOD TO GREAT = OUR ENHANCED STRATEGY FOR THE RETAIL BANK

“BECOME A DISTRIBUTION EXPERT WITH A SEGMENT OVERLAY”

Expected impact: Superior results on all key drivers of profits and incentives

WACHOVIA

When we say “SOA”, what do we mean?

- From a business perspective, Service Oriented Architecture (SOA) is a construct and discipline whereby new business requirements are evaluated holistically against a backdrop of processes and functions that are currently in use by other business solutions. A common process or Service that has been previously created, and paid for, is then augmented or reused, in whole or in part, to create a new or improved process.
- From a technical perspective, SOA is a software architecture model where loosely coupled software components, representing granular but complete technical or business functionality, are accessible through known platform independent interfaces and transports over a network.

SOA is **not**

- ✗ just an IT thing
- ✗ the first time we've considered these concepts
- ✗ a total revamp of core systems

SOA **is**

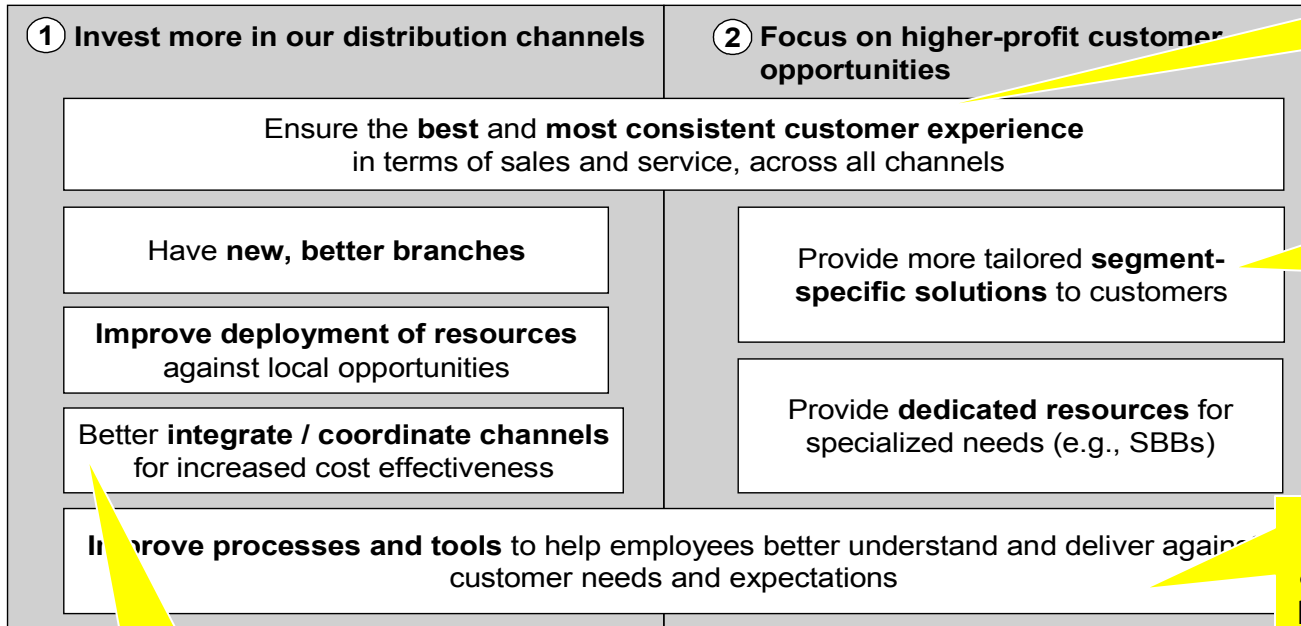

- ✓ Important for implementing our business strategy
- ✓ a critical reason for IT and business to leave their silos and **play as partners**

Why do we believe SOA is important to our business strategy?

Ben Jenkins (Nov 04): "Effectively and efficiently use sales and service channels to capture new opportunities, enhance service and reduce cost through *multi-channel capacity and capability planning, optimal asset and sales/service deployment, improved efficiency of systems, processes and support.*"

GOOD TO GREAT = OUR ENHANCED STRATEGY FOR THE RETAIL BANK

"BECOME A DISTRIBUTION EXPERT WITH A SEGMENT OVERLAY"

Consistency assured by shared business services

SOA enables agility and flexibility

Business architecture and SOA help improve process design and execution

Expected Impact: Superior results on all key drivers of profits and incentives

Shared business services result in better channel integration and reduced costs

WACHOVIA

Our SOA Strategy

Wachovia Retail and Channel Technology will design, construct or acquire solutions with reusable assets within a Service Oriented Architecture.

A Business Reference Model will be used to drive requirements and identify services.

Services will be managed, discoverable, shared, reused, and available to Wachovia applications in all our execution environments.

Services will be identified and prescribed for use during the project feasibility and planning phase.

What's the status of implementing this strategy?

Enabled an Integration Hub as part of the business change to re-platform online banking and bill pay

Current round of implementation, we are riding on the business program called Multi Channel Services

With our business partners, building and using first iterations of business reference model (business architecture)

Driving common services which are more supportive of business activities and less constrained to "technical interfaces"

8 Lessons Learned On The Journey So Far

SOA is not a fully descriptive label, but we use it anyway.

Get comfortable with “learning while doing”. Iteration is required.

Challenge your reuse thinking to move up the hierarchy past infrastructure and shared technical components to shared business services and shared business processes.

Tying to business needs and opportunities is key. Timing is critical and luck is always a good companion!

Business advocacy is key. Getting useful business perspective requires time from individuals who know and manage the business.

The business architecture portion of SOA should be an asset owned by the business. Disciplines other than IT should leverage that asset.

Don't rely on only one source of perspective -- blend and think for yourself.

Persistence is required. This journey is not for those needing immediate gratification nor for the faint of heart.

Challenges we see ahead

Managing internal demand; successfully delivering before we commit to more

Keeping the dots connected within Wachovia

Staying in tune with vendors

Methodical, deliberate, and affordable modernization or replacement of critical systems
