

## TXSeries for Multiplatforms V8.2

Improved performance and enhanced application development

IBM® TXSeries® for Multiplatforms is a distributed transaction processing middleware for C, C++, COBOL, Java™, and PL/I applications in a cloud environment, as well as in traditional data centers. TXSeries provides a reliable, scalable, and highly available platform to develop, deploy, and host mission-critical applications. It also integrates well into a mixed-language, multiplatform, service oriented architecture (SOA) solution. Uniquely, TXSeries is also designed to allow you to scale up to IBM CICS® TS on the mainframe when your business grows.

This new version, TXSeries for Multiplatforms V8.2, provides enhancement in the areas of performance and application development.

### New features

#### Improved performance

The performance of TXSeries for Multiplatforms V8.2 is improved in all areas.

- Up to 5 times improvement in response time, and up to 50% reduction in memory footprint while processing large data, using channels and containers over IP interconnectivity (IPIC) protocol.
- Up to 40% improvement in transaction response time for CICS applications written using Micro Focus COBOL.
- Improvement in transaction throughput and multifold reduction in memory footprint for CICS applications written in Java by using shared class caching in JVM.
- Upto 40% improvement in performance for batch applications accessing VSAM files in Structured File Server (SFS).
- Overall improvement in transaction throughput, in comparison to previous releases of TXSeries.

The performance improvements described above might vary, subject to application, system configuration, and operating environment.

#### Enhanced application development

- Introduces support for COBOL-IT, for Linux on x86 and Microsoft Windows.
- Extends Micro Focus COBOL support to include Visual COBOL on AIX®, Linux on x86, and Microsoft Windows.
- Supports propagation of origin data across inter-related tasks within and between CICS systems.
- Supports Temporary Storage Queue (TSQ) names up to 16 characters.
- Provides an option to toggle the XA Resiliency feature.
- Supports IBM COBOL application developers simultaneously debugging their online CICS Applications
- Supports enhanced IP Sockets interface for COBOL on AIX and Linux x86

- Supports External Call Interface (EXCI) facility on AIX and Linux on x86.
- Supports concurrent TCP/IP Listener programs with the implementation of the CICS sockets listener (CSKL) transaction on both AIX and Linux on x86.

#### Additional serviceability enhancements

- The showProcInfo utility is enhanced to collect process stack traces faster on AIX and Linux on x86.
- A backup mechanism for the console.msg log file is introduced.

### Unique differentiators

- Cost-effective distributed transaction processing offering for traditional language workload.
- TXSeries can be scaled up to CICS TS on the mainframe, if the needs of the business grows.
- Integrates data and applications in distributed solutions and enterprise systems, such as CICS, IBM IMS™, IBM DB2®, IBM WebSphere® MQ.
- Extends CICS applications to the web using CICS TG and WebSphere Application Server.
- Extends traditional language applications to mobile using IBM MobileFirst™ platform (formerly IBM Worklight®) and CICS TG
- Allows applications to be hosted in a traditional datacenter, as well as hosted in cloud.
- Extends CICS applications to integrate in an SOA architecture using web services.
- Reuses existing CICS applications and application programming skill sets in an organization, consistent with a corporate distributed platform policy.

### Available now

Announced September 8th 2015, TXSeries for Multiplatforms V8.2 is available electronically from 25th September 2015. For more details, refer to Software Announcement 70351.

## More details

### Operating systems requirements:

- Microsoft Windows Server 2012, Microsoft Windows Server 2012 R2
- HP-UX 11i V3 (B.11.31.0909) on HP Integrity Platform
- AIX 6.1 TL9 and AIX 7.1 TL3
- RHEL V5.9, V6.4, SLES 11 SP3, and Ubuntu 14.04 on x86 architecture

### Software requirements:

- IBM CICS Transaction Gateway for Multiplatforms V9
- IBM WebSphere MQ V7.5.03, V8.0.0.1IFIX1

### Databases:

- DB2 V9.7 FP5, DB2 V10.1, DB2 V10.5
- Oracle V12.1
- Microsoft SQL Server V2012, 2014

### Languages supported:

- IBM XL C/C++ Enterprise Edition V11, V12 for AIX
- IBM COBOL Set for AIX V4.1.1
- IBM PL/I set for AIX V3.1
- Micro Focus Server Express COBOL V5.1 WP7  
Java 2 Runtime Environment, Standard Edition 7.0, SR5
- HP C/aC++ C.11.31.03
- Micro Focus Server Express COBOL V5.1 WP8
- Java 2 Runtime Environment, Standard Edition 7.0 SR5
- Microsoft Visual Studio V2012, V2014 Update 4
- COBOL-IT Compiler suite Enterprise Edition V3.8.30
- Micro Focus Visual COBOL for Eclipse 2.2 Update 2, Visual COBOL for Visual Studio 2013 2.2 Update 2, and Visual COBOL for Visual Studio 2012 2.2 Update 2
- Java 2 Runtime Environment, Standard Edition 7.0, SR8
