CICS Performance Analyzer

CICS® PA is a powerful off-line reporting tool to help you tune and manage your CICS systems.

KEY FEATURES

Performance analysis

CICS PA collects performance data from CICS and all connected sub-systems and simplifies the understanding of this through runnable reports, alerts and visualisations.

New in 5.2: Extensive performance metrics visualisations.

Problem determination

System bottlenecks can be identified through the use of performance reporting and analysis.

Transactions can be monitored through configurable thresholds, with alerts triggered when these are exceeded.
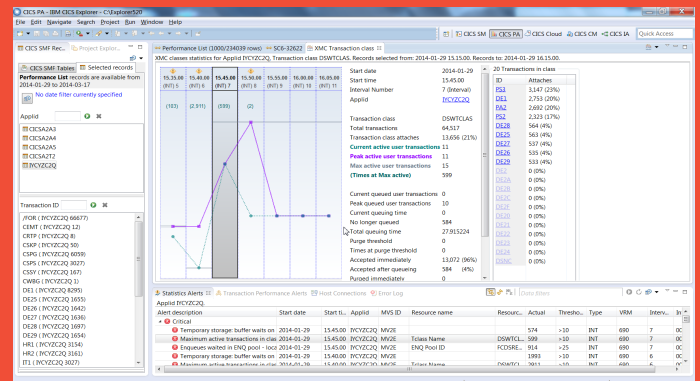

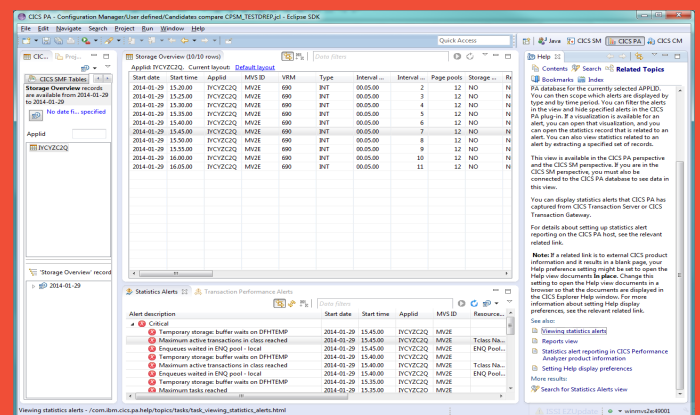

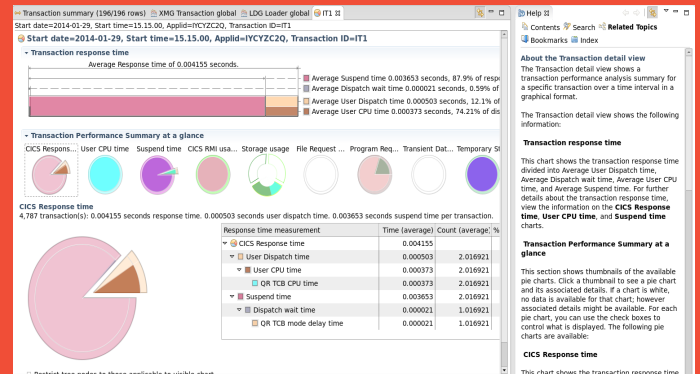

New in 5.2: Emphasis on system health with statistical and transaction performance alerting.

Discover trends

Performance is mapped visually to enable quick recognition of trends over set periods of time.

Features such as Transaction Profiling and baseline comparison reports help to highlight changes in key performance metrics.

New in 5.2: Comprehensive help understanding the data.

IBM® CICS Performance Analyzer for z/OS®
