Slide 2

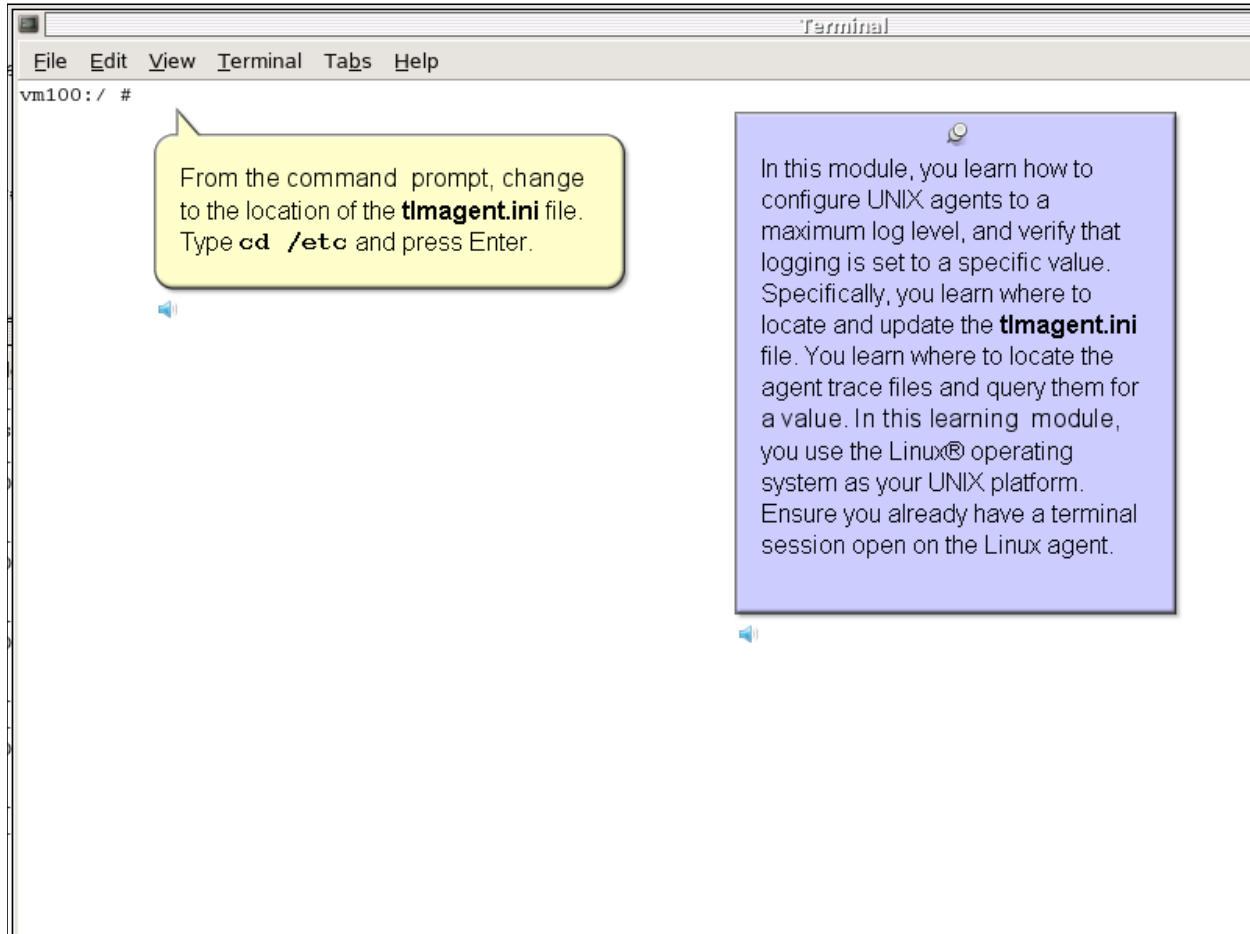

Objectives

After you have completed this module, you can perform the following tasks:

- Locate the **tlmagent.ini** file
- Use the gedit tool to configure UNIX[®] agents to a maximum log level
- Locate the agent trace files
- Verify the logging is set to the correct value

IBM Licence Metric Tool Version 7.2, Configure ILMT agent logging in UNIX

Slide 3

The image shows a terminal window titled "Terminal" with a menu bar containing "File", "Edit", "View", "Terminal", "Tabs", and "Help". The terminal prompt is "vm100: / #".

Two callout boxes are present:

- A yellow callout box on the left contains the text: "From the command prompt, change to the location of the **tlagent.ini** file. Type **cd /etc** and press Enter."
- A blue callout box on the right contains the text: "In this module, you learn how to configure UNIX agents to a maximum log level, and verify that logging is set to a specific value. Specifically, you learn where to locate and update the **tlagent.ini** file. You learn where to locate the agent trace files and query them for a value. In this learning module, you use the Linux® operating system as your UNIX platform. Ensure you already have a terminal session open on the Linux agent."

Slide 5

The image shows a terminal window titled "Terminal" with a menu bar containing "File", "Edit", "View", "Terminal", "Tabs", and "Help". The terminal output shows the user navigating to the /etc directory:

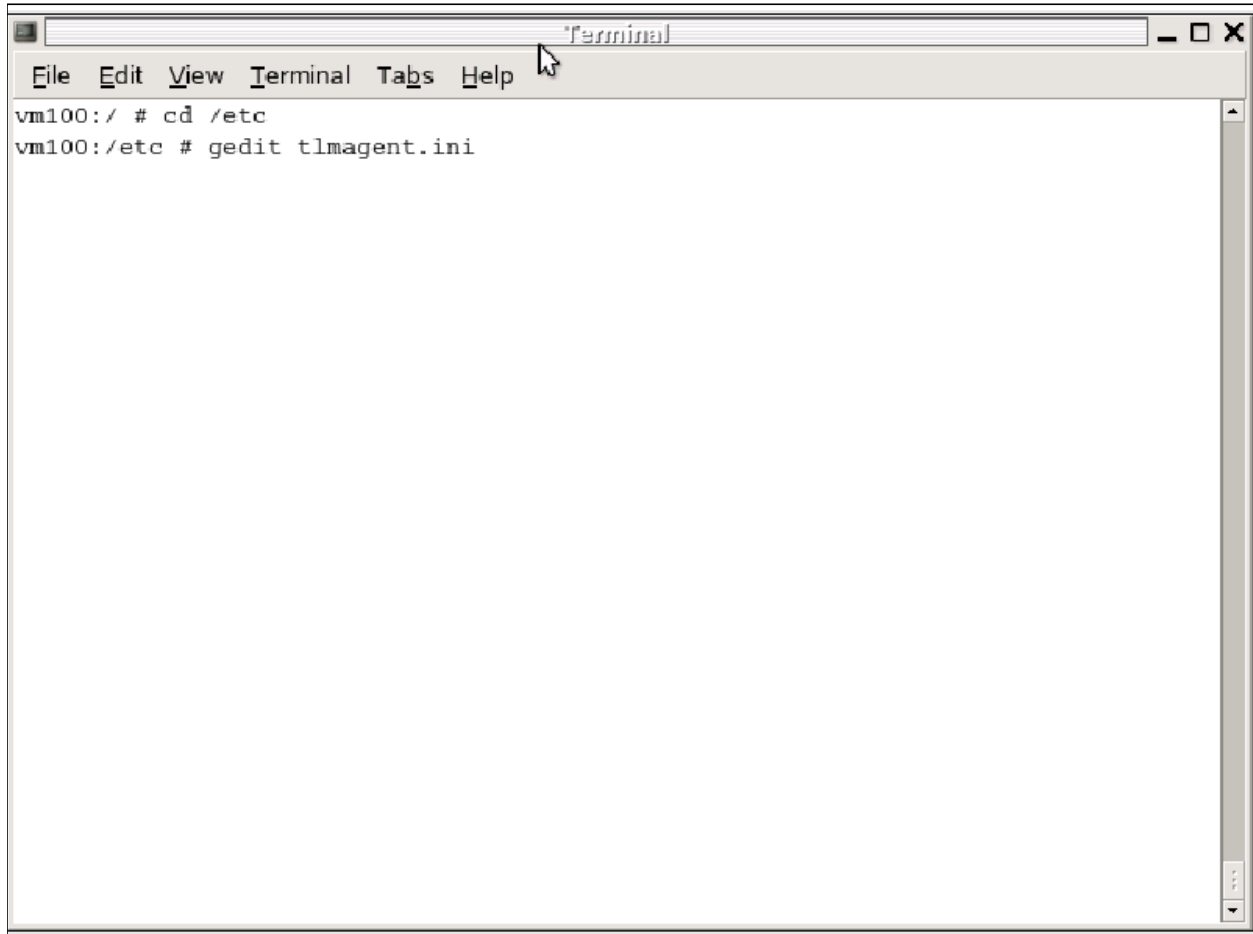

```
vm100:/ # cd /etc
vm100:/etc #
```

Two callout boxes provide instructions:

- A yellow callout box on the left says: "Type `gedit tlmagent.ini` and press Enter."
- A purple callout box on the right says: "Use any text editor that you are familiar with, and edit the `tlmagent.ini` file. This Linux example uses the gedit tool."

Slide 15

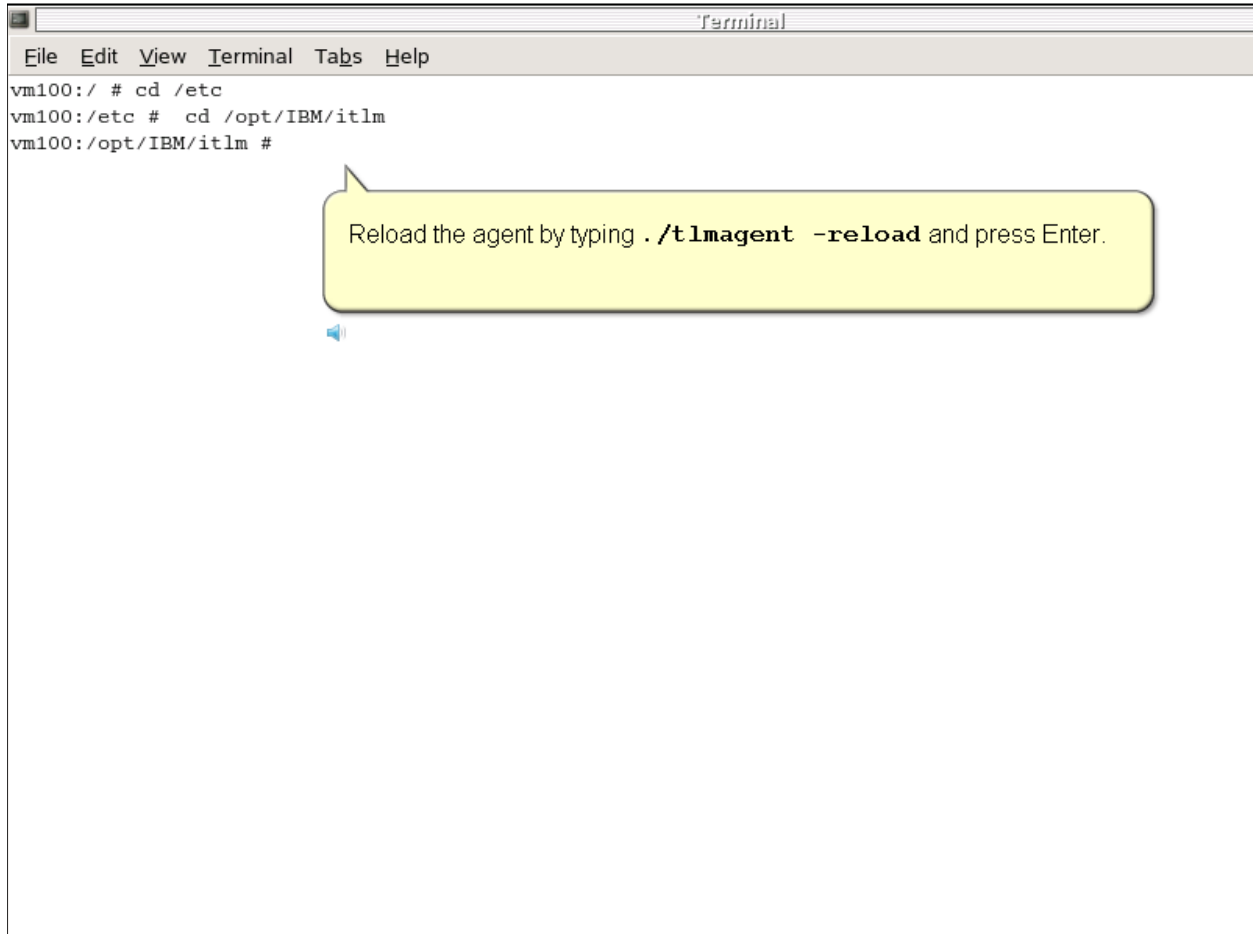

A terminal window titled "Terminal" with a menu bar containing "File", "Edit", "View", "Terminal", "Tabs", and "Help". The terminal content shows the following commands and their output:

```
vm100:/ # cd /etc
vm100:/etc # cd /opt/IBM/itlm
```

IBM Licence Metric Tool Version 7.2, Configure ILMT agent logging in UNIX

Slide 16

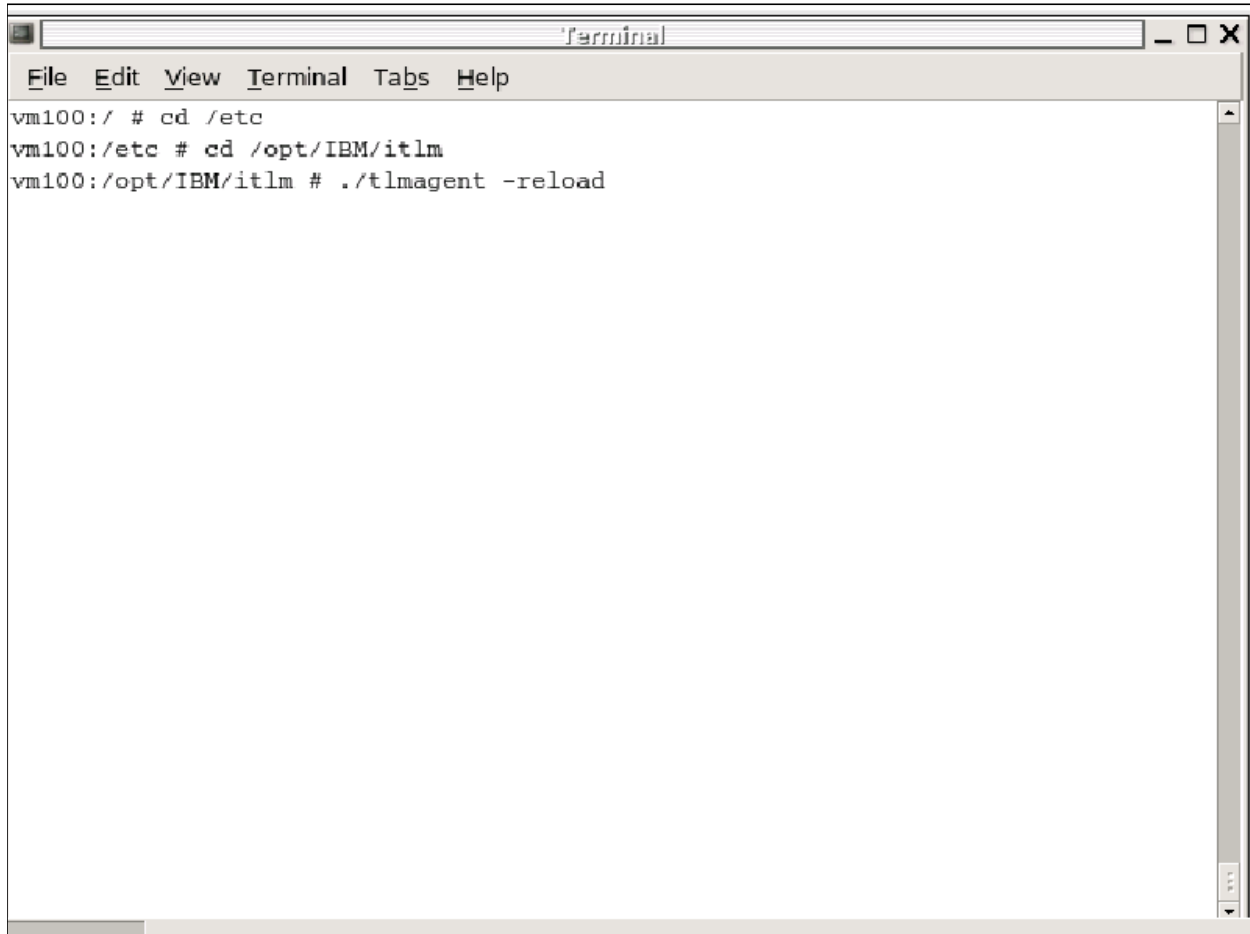

The image shows a terminal window titled "Terminal" with a menu bar containing "File", "Edit", "View", "Terminal", "Tabs", and "Help". The terminal content shows the following commands and prompts:

```
vm100:/ # cd /etc
vm100:/etc # cd /opt/IBM/itlm
vm100:/opt/IBM/itlm #
```

A yellow callout box with a speech bubble tail pointing to the terminal area contains the text: "Reload the agent by typing `./tlmagent -reload` and press Enter." A small blue speaker icon is located below the callout box.

Slide 17

```
Terminal
File Edit View Terminal Tabs Help
vm100:/ # cd /etc
vm100:/etc # cd /opt/IBM/itlm
vm100:/opt/IBM/itlm # ./tlmagent -reload
```

IBM Licence Metric Tool Version 7.2, Configure ILMT agent logging in UNIX

Slide 18

```
vm100:/ # cd /etc
vm100:/etc # cd /opt/IBM/itlm
vm100:/opt/IBM/itlm # ./tlmagent -reload
CODAG010I The command has successfully executed.
vm100:/opt/IBM/itlm #
```

To change directories, type **cd /var/ibm/tivoli/common/COD/logs/agent/trace** and press Enter.

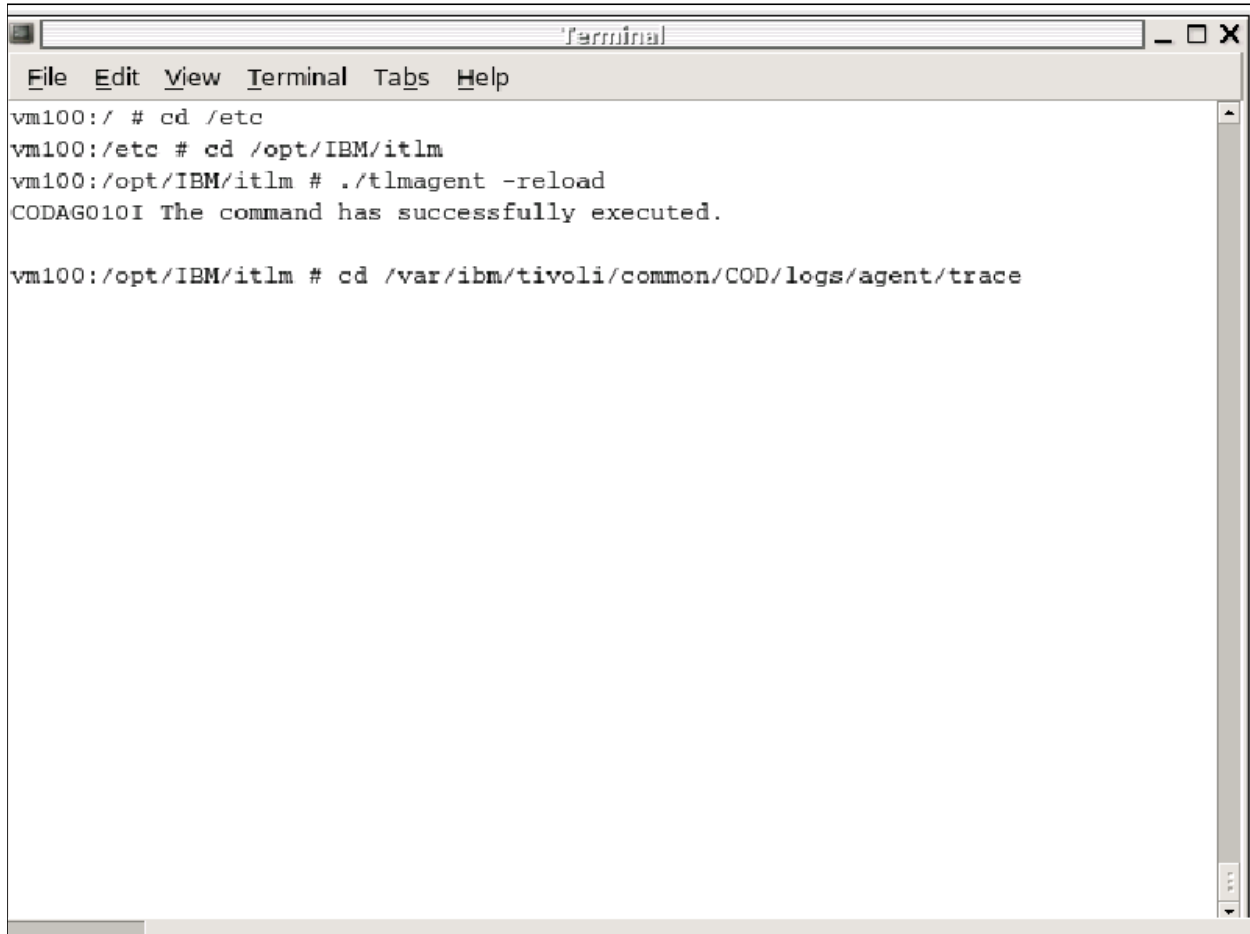

To verify the new log level has taken affect, you must change directory to the location of the agent log files.

Depending on your installation, these files might be under a different file system.
For example: **/var**, **/usr** or **/opt**.

In this example the files are located under the **/opt** file system.

<Trace Level="MAX">
<Trace Level="MAX">
<Trace Level="MAX">
vm100:/var/ibm/tivoli/common/COD/logs/agent/trace #
```

The output lists the new agent logging, indicating **Trace Level= "MAX"**.

Slide 23

Summary

Now that you have completed this module, you can perform the following tasks:

- Locate the **tlmagent.ini** file
- Use the gedit tool to configure UNIX agents to a maximum log level
- Locate the agent trace files
- Verify the logging is set to the correct value
