

This module includes resources for UCM.

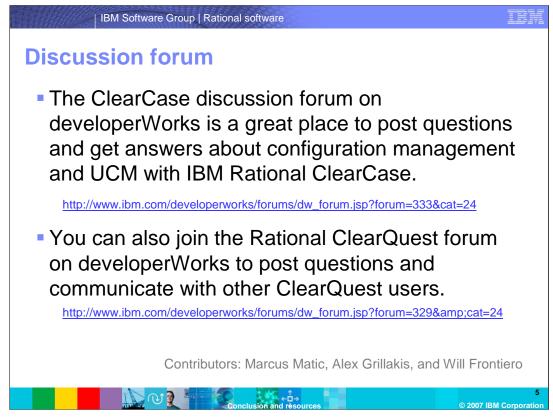

Congratulations! You have completed the IBM Rational ClearCase Unified Change Management course. This course started with an introduction to UCM, including terms and concepts, and showed you how to start developing in UCM. Module 2 covered UCM projects, including details about the project VOB, project structures, and project folders. Module 3 covered UCM internals – including project, stream, and component internals.

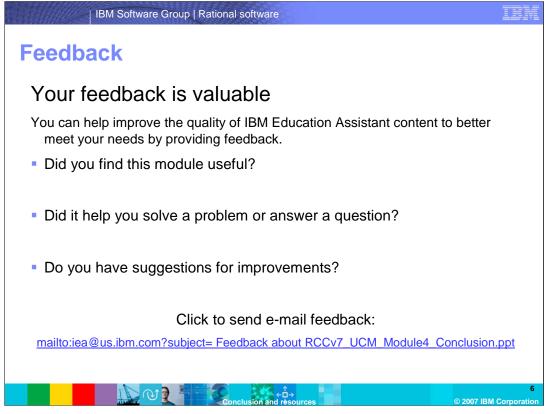

If you are eager to learn more about UCM, there are many resources available to you. To learn more about IBM Rational products, visit the developerWorks Rational zone for technical documentation, education, whitepapers, plug-ins, and downloads on ClearCase and ClearQuest products.

You can find information on virtually anything you want to know about Rational products, the software development platforms, user conferences, product manuals, tutorials like these, whitepapers and much more. You can also review the UCM Redbook at the Web site listed here. Some sections of this training borrowed heavily from this UCM Redbook.

Some useful discussion forums have been set up on developerWorks. It is a great place to post questions and get answers about configuration management, UCM, and IBM Rational ClearCase. You can also join the Rational ClearQuest forum to post questions and communicate with other ClearQuest users.

You can help improve the quality of IBM Education Assistant content by providing feedback.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the users' job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance that any user will achieve throughput or performance to the ratios stated here.
