IBM Rational Developer for Power Systems Software V8.5

Client installation steps

This presentation will describe the steps to install the Rational® Developer for Power Systems Software™ product on your machine.

IBM

If you do not already have the product, you can visit the website listed in order to download the trial version of the product. The trial version comes with a 60-day trial license for each of its four main licensed features. Once the product is downloaded, you will need to extract the file in order to continue with the next step.

With the product extracted, you start the launchpad.exe if you are using Windows or the launchpad.sh if you are using Linux. You must be an administrator or root to start the launch pad.

On the launch pad, you can click the links to view the readme and the installation guide. The installation guide describes the prerequisites of the product. When you are ready, you can choose an installation link for a specific feature of the product or the Install all features link to start the installation of the product.

Install Packages Select a location for the shared resources directory and a location for Installation Manager.	
Instal Licenses Location Peatures Summary	
When you install packages, files are stored in two locations:	
 The shared resources directory - resources that can be shared by multiple packages. The installation directory - any resources that are unique to the package that you are installing. 	
Important: You can only select the shared resources directory the first time you install a package with the BM Installation Manager. For best results select the drive with the most available space because it must have adequate space for the shared resources of future packages.	
Shared Resources Directory: C:\Program Files (x86)\U8M\SDPShared Browse	
Once installed, IBM Installation Manager will be used to install, update, modify, manage and uninstall your packages.

For the product being installed, you need to specify the installation directory for the package group. If you have other products installed, you could specify to use an existing package group if you want to have one IDE with multiple products' functionality together. On 64-bit operating systems, you can choose either to install as a 32-bit application or a 64-bit application. All products in a package group use the same architecture selection. Click Next to continue.
