•Install and configure the Tivoli Storage Manager 6.1 backup-archive client

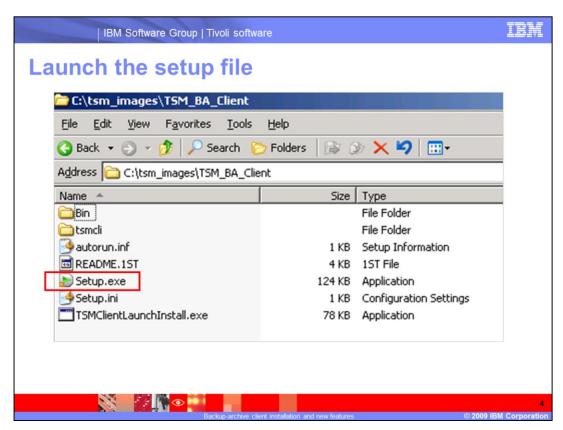

•Describe the new features for the Tivoli Storage Manager 6.1 backup-archive client

client_install.ppt Page 2 of 35

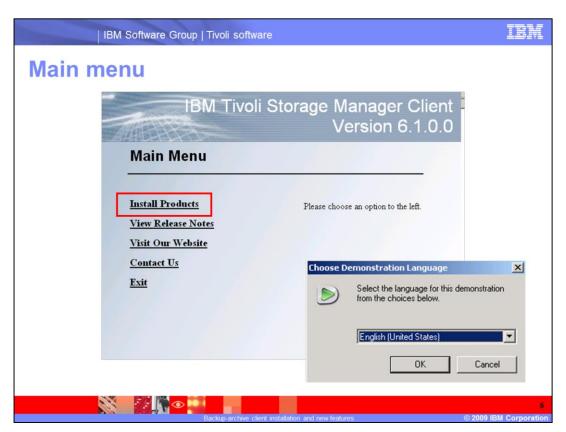

In this example, the installation is on a Windows® 2003 client. Click the .exe file in the code package for the IBM Tivoli Storage Manager 6.1 backup-archive client. Accept the default location for the saved files or click **Change** and select a different location.

client_install.ppt Page 3 of 35

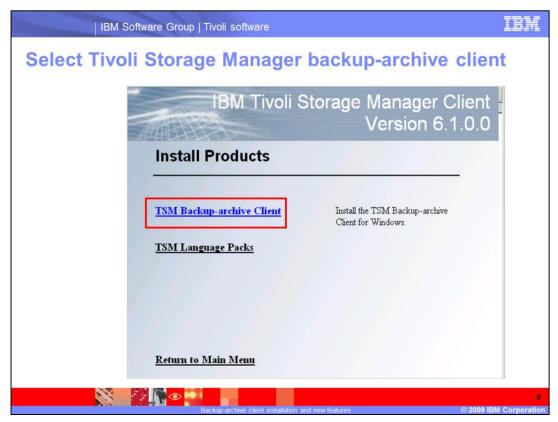

After the setup files are extracted, go to the folder you designated as the location for the extracted files. Click **Setup.exe** to begin the installation.

client_install.ppt Page 4 of 35

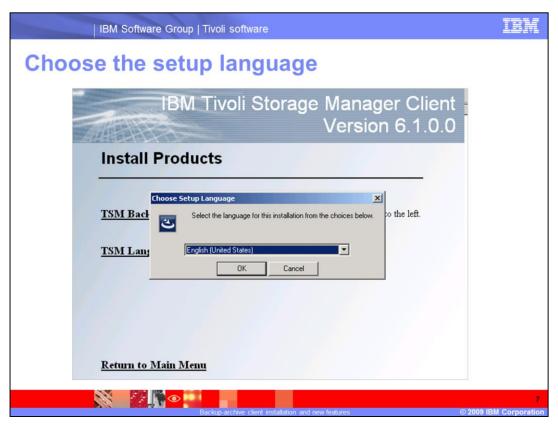

In the main menu, you can select the products, view the release notes, or connect to the Web site. Click **Install Products**. Accept the default demonstration language or select another language from the menu.

client_install.ppt Page 5 of 35

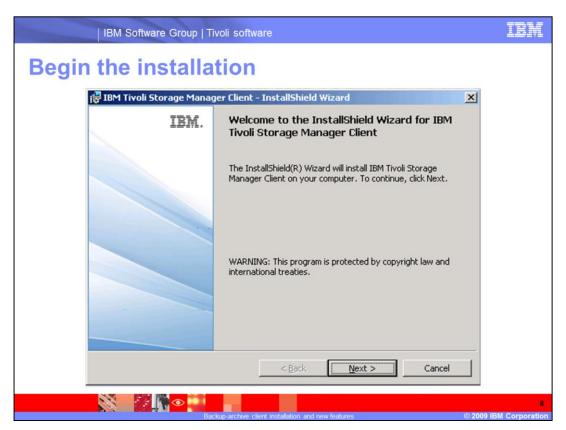

Click TSM Backup-archive Client.

client_install.ppt Page 6 of 35

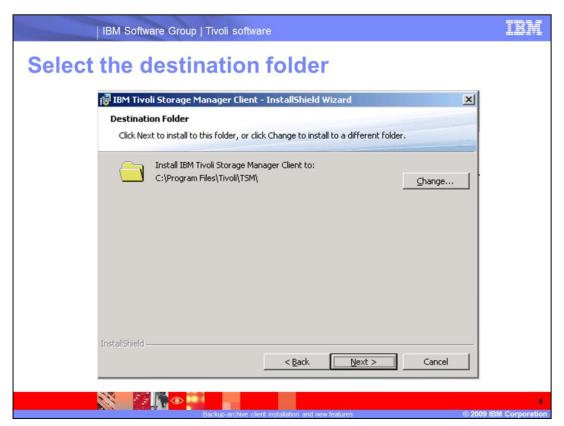

In the Choose Setup Language menu, select the language for the installation and click \mathbf{OK} .

client_install.ppt Page 7 of 35

Click Next to continue.

client_install.ppt Page 8 of 35

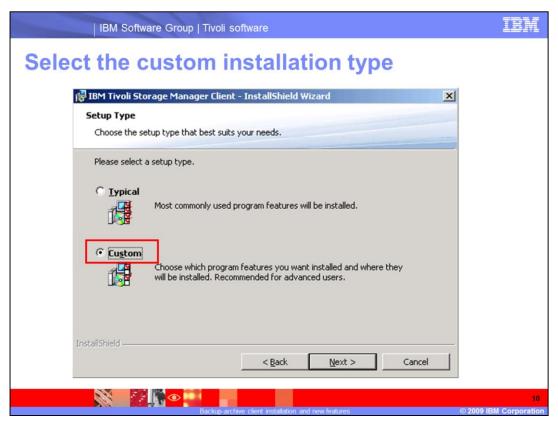

The default folder is displayed on the Destination Folder page. The default folder for Windows is **C:\Program Files\Tivoli\TSM**. To select a different folder, click **Change** and enter the path and folder name. Click **Next**.

For UNIX®, except AIX®, the Tivoli Storage Manager files are installed in the /opt/tivoli/tsm/client/ba/bin or /bin64 directory.

For AIX, the files are installed in the /usr/tivoli/tsm/client/ba/bin directory.

client_install.ppt Page 9 of 35

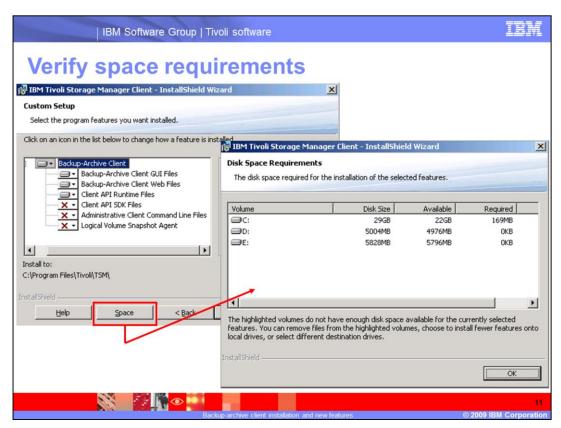

The two types of setup are Typical and Custom.

- •A Typical setup includes the backup-archive client, the API runtime files, and the Web client.
- •A Custom setup includes the backup-archive client, the API runtime files, the Web client, and optional features.

Click Custom, and then click Next.

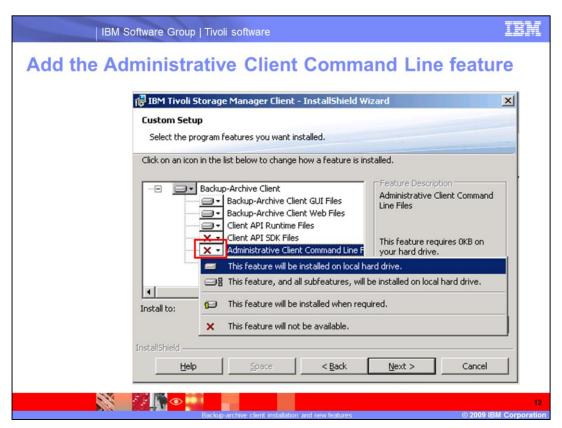

client_install.ppt Page 10 of 35

To verify the available disk space, click the **Space** button at the bottom of the page. The next page shows the disk sizes, space available, and space required. Click **OK** to return to the Custom Setup page.

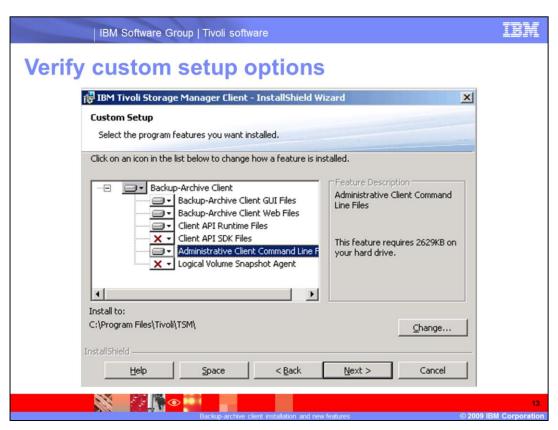

The optional features available with the custom setup are Client API SDK Files, Administrative Client Command Line Files, and Logical Volume Snapshot Agent.

client_install.ppt Page 11 of 35

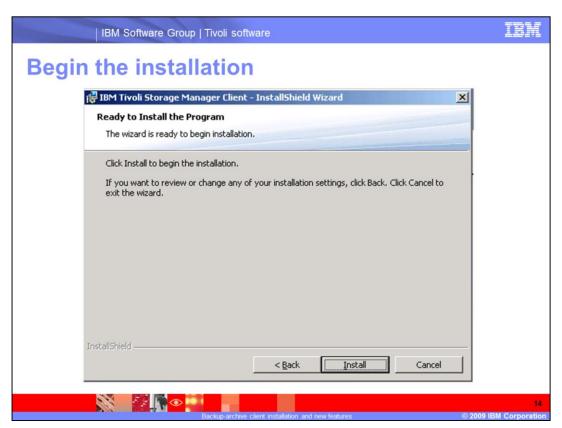

Click the pull-down menu beside **Administrative Client Command Line Files**. Select **This feature will be installed on local hard drive**.

client_install.ppt Page 12 of 35

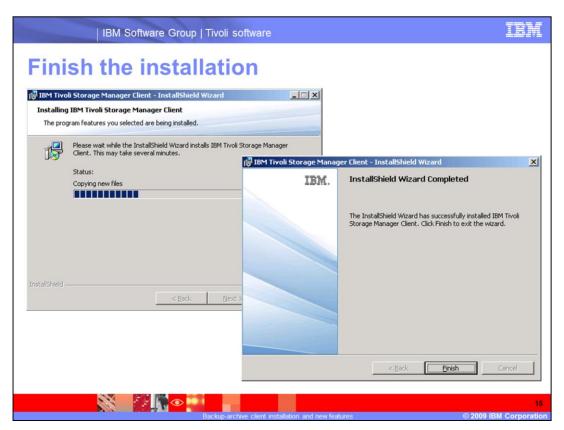

Click **Next** to continue.

client_install.ppt Page 13 of 35

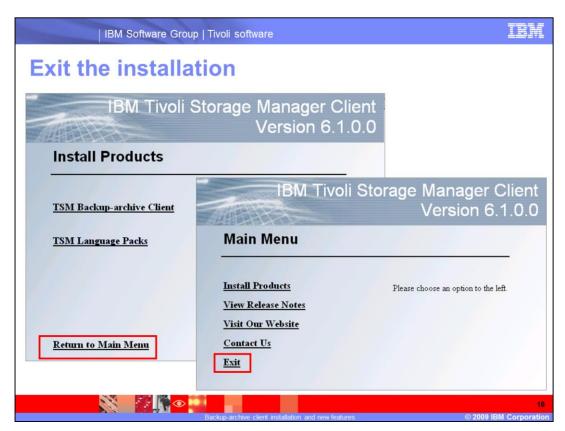

Click Install to begin the installation.

client_install.ppt Page 14 of 35

The status is displayed during the installation. When the installation is complete, the InstallShield Wizard Completed page is displayed. Click **Finish**.

client_install.ppt Page 15 of 35

On the Install Products menu, click Return to Main Menu.

On the Main Menu, click Exit.

Client options file

- To use the backup-archive client, configure the dsm.opt file in the C:\Program Files\Tivoli\TSM\baclient directory
- Use one of the following two methods to add the dsm.opt file to your client.
 - Copy the dsm.opt file from C:\Program Files\Tivoli\Tivoli
 Storage Manager\console\dsm.opt to C:\Program
 Files\Tivoli\TSM\baclient and add the nodename
 - Use the Tivoli Storage Manager Client Options File Configuration Wizard

To use the backup-archive client, configure the dsm.opt file in the C:\Program Files\Tivoli\TSM\baclient directory.

Use one of the following two methods to add the dsm.opt file to your client.

- •Copy the dsm.opt file from C:\Program Files\Tivoli\TSM\console\dsm.opt to C:\Program Files\Tivoli\TSM\baclient and add the nodename.
- •Use the Tivoli Storage Manager Client Options File Configuration Wizard.

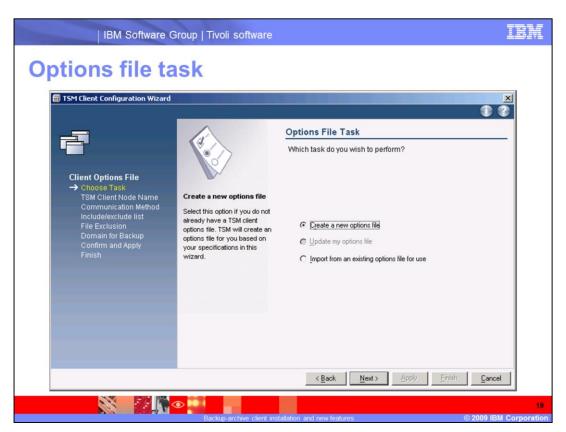

On UNIX clients, you have a dsm.opt file and a dsm.sys file for client options. For systems other than Solaris, copy the dsm.opt.smp file to your home directory as dsm.opt. The sample system options file, dsm.sys.smp, is now in the installation directory.

client_install.ppt Page 17 of 35

Use the TSM Client Configuration Wizard to configure the client options file. After you finish the initial setup of the options file, you can use the Preferences Editor to specify other client options. Click **Next** to continue.

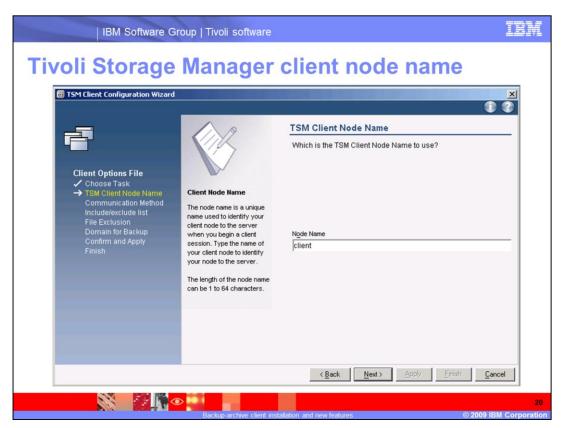

client_install.ppt Page 18 of 35

Select the task you want to perform. You can create a new options file, update an existing options file, or import from an existing options file.

Select Create a new options file and click Next.

client_install.ppt Page 19 of 35

The node name is a unique name used to identify your client node to the server when you begin a client session. The length of the node name can be 1 to 64 characters. The node name in this module is **client**. Click **Next** to continue.

client_install.ppt Page 20 of 35

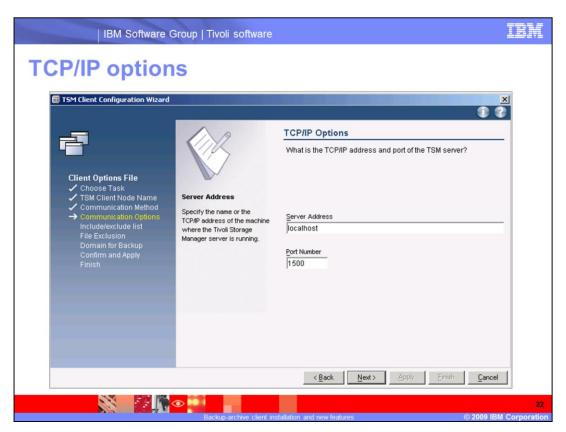

Select which communication method you want the Tivoli Storage Manager client to use when communicating with the Tivoli Storage Manager server. The options are TCP/IP, TCP/IPv6, Named Pipe, Shared Memory, and Use Active Directory®.

In this module TCP/IP is used.

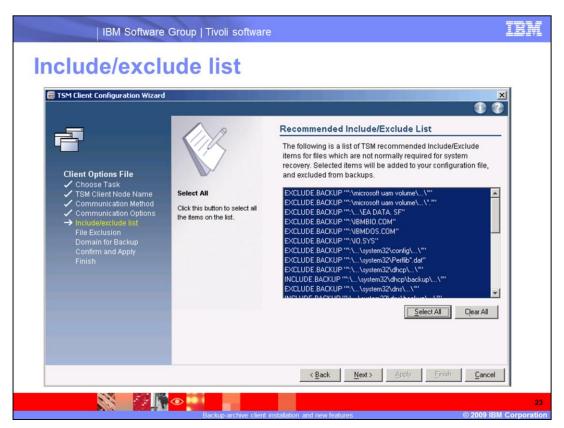

Click **Next** to continue.

client_install.ppt Page 21 of 35

Specify the name of the TCP/IP address of the machine where the Tivoli Storage Manager server is running. The TCP/IP port address communicates with a server. The range of values is 1 to 32767. The default value is 1500. Click **Next** to continue.

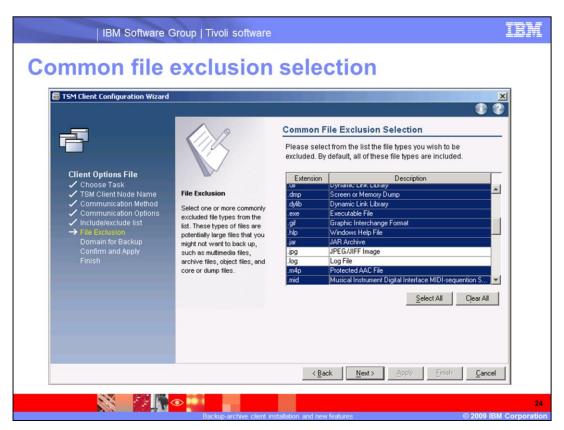

client_install.ppt Page 22 of 35

An include/exclude list is displayed. In this list are the Tivoli Storage Manager recommended include/exclude items that are typically required for system recovery. Selected items are added to your configuration file. Base your selection on the requirement for your enterprise.

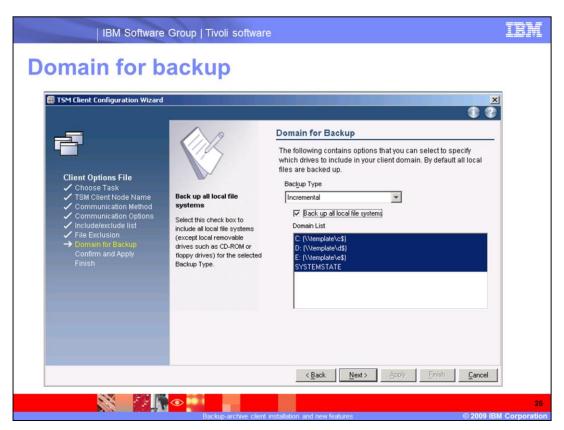

Click **Select All** or **Clear All**. You can use a command line or the Preferences Editor to add items to the include/exclude list at any time. Click **Next** to continue.

client_install.ppt Page 23 of 35

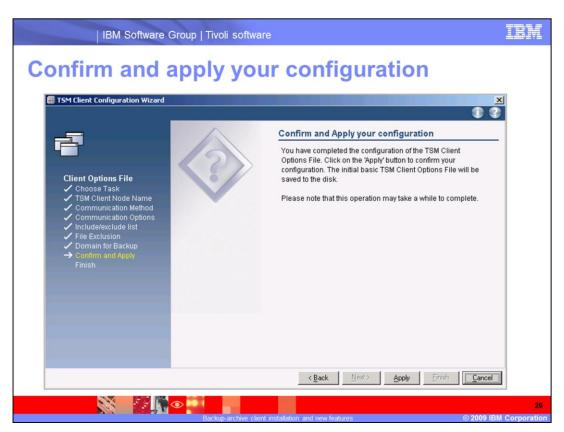

Select the file types you want to exclude from backup. By default, all of these file types are included in the backup. Base your selection on the requirement for your enterprise. Click **Next** to continue.

client_install.ppt Page 24 of 35

Specify the drives to include in your client domain. By default all local files are backed up. Select the **Back up all local file systems** check box to include all local file system drives. Base your selection on the requirement for your enterprise. Click **Next** to continue.

client_install.ppt Page 25 of 35

After you complete the configuration of the Tivoli Storage Manager client options file, click the **Apply** button. Click **Finish** to complete the configuration.

This is an example of a dsm.opt file.

After your initial configuration, you can edit your dsm.opt file as appropriate for your system. You can also use the Tivoli Storage Manager Preferences Editor. On the Tivoli Storage Manager graphical user interface, click **Edit** > **Preferences**.

client_install.ppt Page 27 of 35

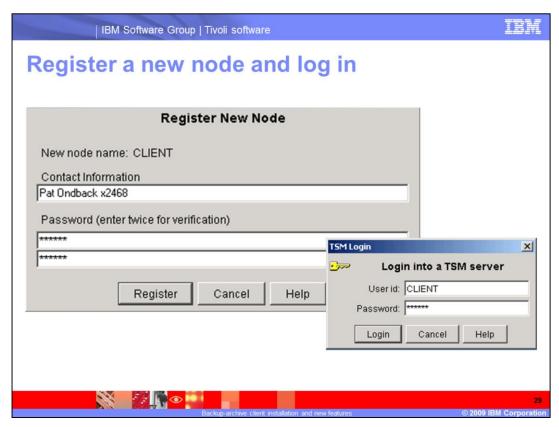

You can use the backup-archive command line or the backup-archive GUI to backup, restore, archive, and retrieve your data.

To access the backup-archive interfaces, click **Start > Programs** (or All Programs, depending on your operating system).

Select **Tivoli Storage Manager** from the list of programs.

Select either the backup-archive command line or the backup-archive GUI.

The two types of registration are open registration and closed registration.

If the Tivoli Storage Manager administrator sets the registration to open, Tivoli Storage Manager prompts you for information the first time you start a session. Provide the information to register your workstation with the server identified in your client options file.

If your enterprise uses closed registration, a Tivoli Storage Manager administrator registers your workstation as a client node with the server. Your administrator provides your contact information, the node name, and the initial password.

client_install.ppt Page 29 of 35

After you configure and register the client, you can modify the client options file with the Preferences Editor.

Open the backup-archive GUI. Click **Edit** > **Client Preferences**.

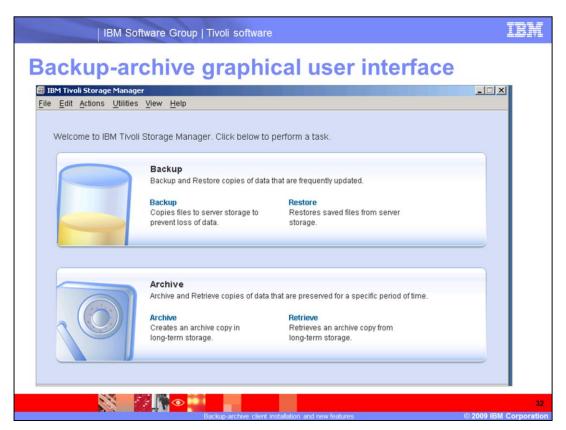

client_install.ppt Page 30 of 35

Some of the key new backup-archive client functions for IBM Tivoli Storage Manager 6.1 are VMware consolidated backup (VCB), Windows Active Directory backup, improved backup-archive graphical user interface, or GUI, and improved Help commands.

You can copy full VMware virtual disk exports from snapshots to the backup proxy. The entire virtual machine is backed up as a single item, similar to a Tivoli Storage Manager image backup. The exports are broken into 2 GB file chunks, which are backed up at a file level.

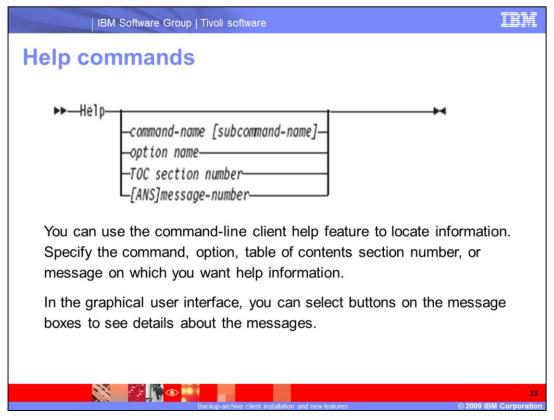

You can restore Individual Active Directory objects from Local Deleted Objects or from the Tivoli Storage Manager Server. You can use the Active Directory deleted object recovery and item-level restore to recover Active Directory objects. This feature, called tombstone reanimation, does not require a shutdown or reboot of the Active Directory server. You can also use Tivoli Storage Manager to back up and restore Windows Active Directory objects.

client_install.ppt Page 31 of 35

The backup-archive graphical user interface has a new design. The backup and restore section is represented by a graphic of a disk. The archive and retrieve section has a graphic of a safe.

client_install.ppt Page 32 of 35

You can use the command-line client help feature to locate information. Specify the command name, option name, table of contents section number, or message number options in the command.

In the graphical user interface help message, you can select buttons on the message boxes to see details about the messages.

The following options are available.

- •The **command-name [subcommand-name]** option specifies a command name and a subcommand name (or abbreviation). An example is backup image, or b i. Use a unique combination of letters for abbreviations. If you use non-unique abbreviations, your results include the entire first section matching those abbreviations in the help file.
- •The **option name** specifies the name of an option, for example, *verbose* or *v*. This parameter is optional.
- •The **TOC section number** option specifies a table of contents section number, for example, 2.46 or 3.65.1. This parameter is optional.
- •The **[ANS]message-number** option specifies a message number with or without its prefix, for example, ans1036 or 1036. This parameter is optional.

This concludes the training module for Tivoli Storage Manager 6.1 backup-archive client installation and new features.

You should now be able to install and configure the Tivoli Storage Manager 6.1 backuparchive client. You should also be able to describe the new features presented in this module.

Performance is based on measurements and projections using standard IBM benchmarks in a controlled emironment. All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. The actual throughput or performance that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput or performance improvements equivalent to the ratios stated here.
