Part 9: Rebuild Search index .....	26
Part 10: What you did in this exercise.....	27

## What this exercise is about

In this tutorial, you will explore the new catalog filtering and attribute dictionary capabilities in WebSphere Commerce. You will browse and work with attributes using the new attribute dictionary tools in the Management Center. You will then assign new attributes to products and generate SKUs from them. You will then create several types of catalog filters using the new Catalog Filter and Pricing tool. Finally, you will then assign the filters and verify the results on the storefront.

This tutorial should take approximately 90 min to complete.

## What you should be able to do

After completing this exercise, you should be able to:

- Modify attributes in the attribute dictionary
- Assign new attribute dictionary attributes as defining attributes to products
- Create SKUs from attribute dictionary attributes and values
- View new facets in search navigation based on attributes
- Create catalog filters using Catalog Filter Upload in the Catalog Filter and Pricing tool
- Use attribute dictionary attributes and product properties in catalog filters
- Assign newly created dynamic filters in Accelerator
- Verify results on the storefront after filter assignment

## Introduction

The following naming conventions are used in the exercises:

Reference Variable	Description
<WCDE_INSTALL_DIR>	C:\WCDE_ENT70
<Hostname>	Hostname for WebSphere Commerce
<AD_Sample>	Location where you download the AD/AttributeDictionary.csv

## Requirements

Before you begin:

- Install WebSphere Commerce V7 fix pack 2
- Install WebSphere Commerce V7 feature pack 2
- Complete feature enablement
- Publish feature pack Madisons starter store archive **Madisons-FEP.sar**
- Configure search on Madisons store

## Part 1: Browse Madisons store

In this part of the lab, you will browse the Madisons store to familiarize yourself with the categories and entries before you apply any filters.

- \_\_\_ 1. Start your WebSphere Commerce application or test server.
- \_\_\_ 2. Launch Management Center using the URL `https://<WC_HOST>:8000/lobtools` or from the `hintsandtips.html` from the toolkit install directory.
- \_\_\_ 3. Launch the **Madisons** store.
- \_\_\_ 4. Navigate to the **Apparel** category from the top navigation.
  - \_\_\_ a. Go to the **Girls Dresses and Skirts** category. There should be six products in this category. Note that they are currently not further categorized by attributes.

The screenshot shows the Madisons store website. At the top, there is a navigation bar with categories: Furniture, Tableware, Kitchenware, Apparel, and See All. A shopping cart icon indicates 0 items for \$0.00. The current page is 'Girls Dresses and Skirts'. A banner for 'Adorable dresses for young girls' is displayed, starting at \$19.99. Below the banner, there are six products listed in a grid:

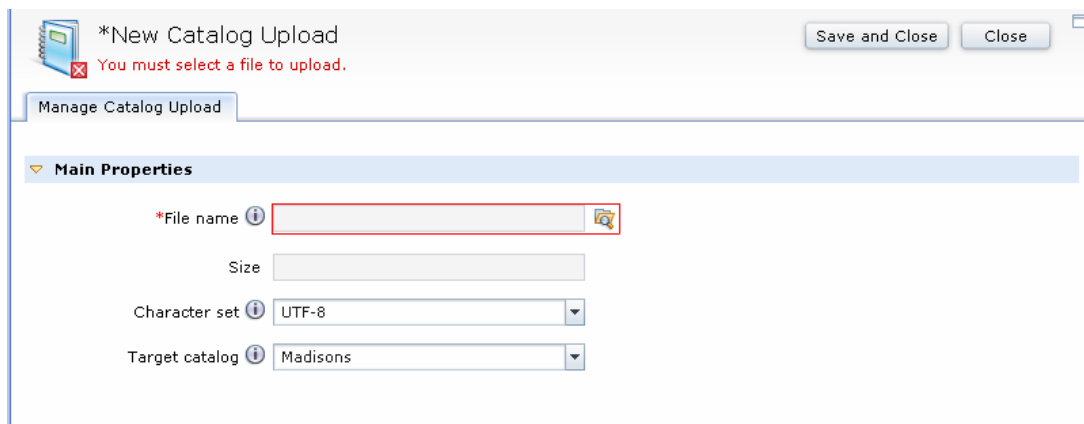

Product Name	Price	Action
Denim Jumper	\$14.99	Add to Cart
Garden denim Jumper	\$17.99	Add to Cart
Pretty in pink	\$29.99	Add to Cart
Woven sleeveless top	\$15.99	Add to Cart
Animal print skirt	\$15.99	Add to Cart
Flower tiered skirt	\$14.99	Add to Cart

On the right side, there is a 'Compare' section, an 'E-mail Newsletter' sign-up, and a 'Recommendations' section with items like Red Fabric Roll Arm Sofa, Classic Fabric Sofa, and Wing Tip Leather Sofa.

## Part 2: Browsing the attribute dictionary

You will browse attribute dictionary attributes of the Madisons store.

- \_\_\_ 1. Start your WebSphere Commerce application or test server.
- \_\_\_ 2. Launch Management Center using the URL **https://<WC\_HOST>:8000/lobtools**.
- \_\_\_ 3. Open the **Catalogs** tool and select **Madisons** store from the drop down menu.
- \_\_\_ 4. Upload attribute dictionary data.
  - \_\_\_ a. Select **New > Catalog Upload**.

- \_\_\_ b. Click the browse icon and navigate to <AD\_sample> file to upload.
- \_\_\_ c. Go to the **Catalog Uploads** folder on the left navigation to see the status of the upload.
- \_\_\_ d. Ensure that status is success before proceeding.
- \_\_\_ 5. Browse attribute dictionary attributes.
  - \_\_\_ a. You can browse the available attributes by going to the catalog filters and select **Attribute Dictionary** from the drop down menu. Note: If you do not have any attribute dictionary attributes in the database, then the **Attribute Dictionary** option is not available.
  - \_\_\_ b. Select the store **Attribute Dictionary** option from the left navigation.
  - \_\_\_ c. Make sure all attributes are marked **Searchable**. Click **File > Save All**.

0.0		espresso	Espresso	Text	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Part 3: Working with attribute dictionary attributes

In this part of the lab, you will work with attribution dictionary attributes including modifying the attributes, adding new values, adding descriptive, defining attributes and lastly generate SKUs.

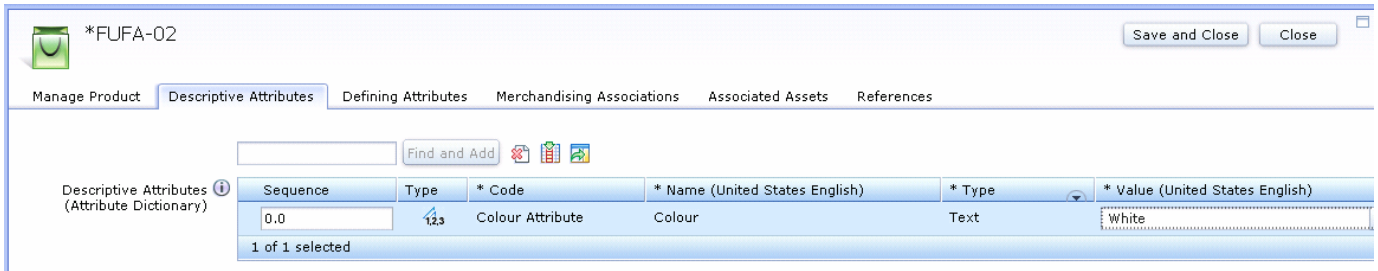

- \_\_\_ 1. Start your WebSphere Commerce application or test server.
- \_\_\_ 2. Launch Management Center using the URL **https://<WC\_HOST>:8000/lobtools**.
- \_\_\_ 3. Open the **Catalogs** tool and select **Madisons** store from the drop down menu.
- \_\_\_ 4. Access the **Attribute Dictionary** from the drop down menu.
- \_\_\_ 5. Modify attributes in the attribute dictionary.
  - \_\_\_ a. Select and open the **Colour Attribute** by double-clicking on the entry.
  - \_\_\_ b. Scroll down to the **Attribute Value Information** section.
  - \_\_\_ c. Click the new icon  and add a new attribute value: **Pink** with a Sequence of **5.0**.

Attribute Values Information

Sequence (United States English)	* Type	* Value (United States English)	Default value
1.0		Red	<input type="checkbox"/>
2.0		White	<input type="checkbox"/>
3.0		Blue	<input type="checkbox"/>
4.0		Black	<input type="checkbox"/>
5.0		Pink	<input type="checkbox"/>

1 of 5 selected

- \_\_\_ d. Click **Save and Close**.
- \_\_\_ 6. Add attribute dictionary descriptive attribute.
  - \_\_\_ a. Browse to the Master Catalog.
  - \_\_\_ b. Navigate to **Furniture > Fabric Sofas** category.
  - \_\_\_ c. Open the **White Fabric Roll Arm Sofa (FUFA-02)** and navigate to the Descriptive Attributes tab.
  - \_\_\_ d. You can now add attribute dictionary attributes by opening the utility pane and go to the **Browse** tab.
  - \_\_\_ e. Select the **Attribute Dictionary Attributes** from the drop down menu and expand the section.
  - \_\_\_ f. Drag **Colour Attribute** to the table and select **White** as the **Value**.

\_\_\_ g. **Save and Close.**

\_\_\_ 7. You will be adding color and size attribute dictionary defining attributes to all the items in Girls Dresses and Skirts category.

\_\_\_ a. Navigate to the **Apparel > Girls Dresses and Skirts** category.

\_\_\_ b. Open **Denim jumper (MW-0018)** and navigate to the **Defining Attributes** tab.

\_\_\_ c. Remove existing classic attribute, **SIZE**, by selecting the attribute and click the **Delete** icon.

\_\_\_ d. You can now add attribute dictionary attributes by opening the utility pane and go to the **Browse** tab.

\_\_\_ e. Select the **Attribute Dictionary Attributes** from the drop down menu and expand the section.

\_\_\_ f. Drag **Colour Attribute** and **Size Attribute** to the table.

\_\_\_ g. **Save and Close.**

\_\_\_ h. Repeat steps c – h for the following entries.

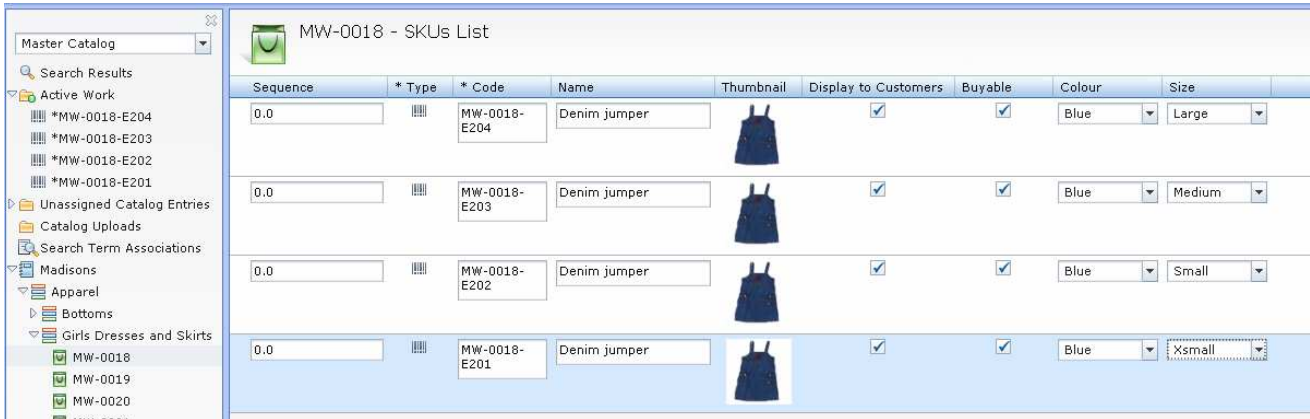

- 1) MW-0021 Garden denim jumper
- 2) MW-0027 Pretty in pink
- 3) MW-0019 Woven sleeveless top
- 4) MW-0020 Animal print skirt
- 5) MW-0024 Flower tiered skirt

\_\_\_ 8. You will be modifying existing SKUs for the entries you just added defining attributes for.

- \_\_\_ a. Select **MW-0018** to view all the existing SKUs for the product.
- \_\_\_ b. Specify the following combinations for the SKUs:

Colour	Size
Blue	Large
Blue	Medium
Blue	Small
Blue	Xsmall

- \_\_\_ c. Go to File > Save all.
- \_\_\_ d. Repeat steps a – c for the rest of the entries in the category.

Product	Colour	Size
MW-0019	White	Large, Medium, Small, Xsmall
MW-0020	White	Large, Medium, Small, Xsmall
MW-0021	Blue	Large, Medium, Small, Xsmall
MW-0024	Pink	Large, Medium, Small, Xsmall
MW-0027	Pink	Large, Medium, Small, Xsmall

## Part 4: Verify new attributes

In this part of the lab, you will browse the storefront and verify the new defining attributes you added for the products in the Girls Dresses and Skirts category.

- \_\_\_ 1. Since you made changes to the attribute dictionary, you need to manually rebuild the search index in order to see the new facets on the storefront.
  - \_\_\_ a. Complete **Part 9: Rebuild Search Index** before proceeding to the verification steps.
- \_\_\_ 2. Launch the **Madisons** store.
- \_\_\_ 3. Navigate to the **Apparel > Girls Dresses and Skirts** category and verify the attributes you just added.
- \_\_\_ 4. If you do not see the new facets, close all your browser windows and open it again.

Home | Girls Dresses and Skirts

Narrow your results by:

## Part 5: Create catalog filters

In this part of the lab, you will use the new Catalog Filter and Pricing tool to create catalog filters based on categories, attribute and property conditions.

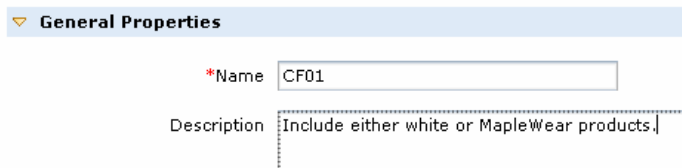

- \_\_\_ 1. Start your WebSphere Commerce application or test server.
- \_\_\_ 2. Launch Management Center using the URL **https://<WC\_HOST>:8000/lobtools**.
- \_\_\_ 3. Open the new **Catalog Filter and Pricing tool** and select the **Madisons** store.

- \_\_\_ 4. Create catalog filter 1 (CF01) to include all catalog entries that are either **white** **OR** is manufactured by **MapleWear**.
  - \_\_\_ a. Create a new catalog filter by clicking on the New icon and selecting Catalog Filter.
  - \_\_\_ b. Specify the following fields under General Properties.

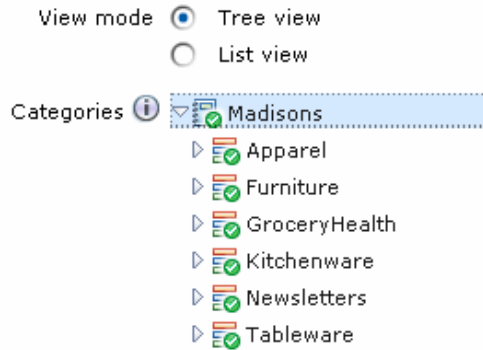

1) **Name:** CF01

2) **Description:** Include either white or MapleWear products.

A screenshot of the 'General Properties' section in the management console. It shows a form with two fields: '\*Name' with the value 'CF01' and 'Description' with the value 'Include either white or MapleWear products.' The 'Description' field is enclosed in a dashed border.

- \_\_\_ c. Expand the **Filter by Categories, Attributes, and Properties** section.
  - 1) From the tree view, right click the **Madisons** catalog and select **Include**.

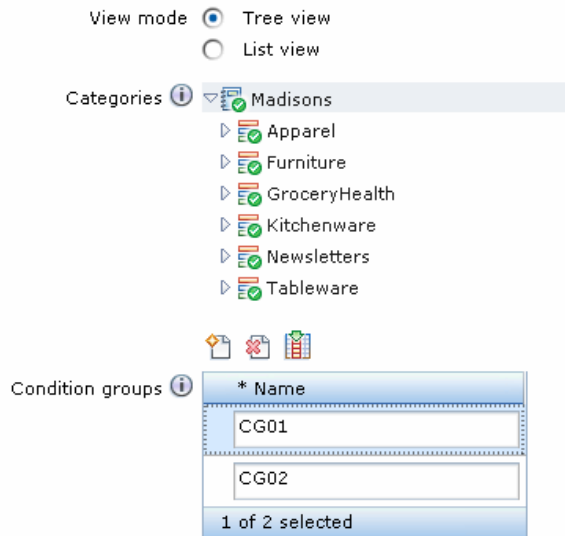

Filter by Categories, Attributes, and Properties

\_\_\_ d. Since this is a union of two conditions, you want to create two separate condition groups each with one condition.

- 1) Click the New icon to create the first condition group (**CG01**).
- 2) Click the New icon again to create the second condition group (**CG02**).
- 3) Ensure the **Madisons** catalog is selected.

Filter by Categories, Attributes, and Properties

\_\_\_ e. Select **CG01** and click the New Icon to create a new **Attribute Dictionary Attribute** condition.

- 1) Specify 'colour' as the keyword in the pop-up box.

2) Select **equals** as the operator.

3) Select **white** as the value.

\_\_ f. Select **CG02** and click the New Icon to create a new property condition.

1) Select **Manufacturer Name** as the name of the condition.

2) Select **equals** as the property.

3) Specify the value as **MapleWear**.

\_\_ g. Save and Close the filter.

\_\_\_ 5. Create catalog filter 2 (CF02) to include all catalog entries that are **white AND** are manufactured by **MapleWear**.

\_\_\_ a. Create a new catalog filter by clicking on the New icon and selecting Catalog Filter.

\_\_\_ b. Specify the following fields under **General Properties**.

**General Properties**

\*Name

Description

\_\_\_ c. Expand the **Filter by Categories, Attributes, and Properties Categories** section.

1) From the tree view, right click the **Madisons** catalog and select **Include**.

\_\_\_ d. Since this is an intersection of two conditions, you want to create one condition group with two conditions.

1) Click the New icon to create the first condition group (**CG01**).

2) Ensure the Madisons catalog is selected.

**Filter by Categories, Attributes, and Properties**

View mode  Tree view  
 List view

Categories **Madisons**

- Apparel
- Furniture
- GroceryHealth
- Kitchenware
- Newsletters
- Tableware

Condition groups **CG01**

\* Name  
CG01  
1 of 1 selected

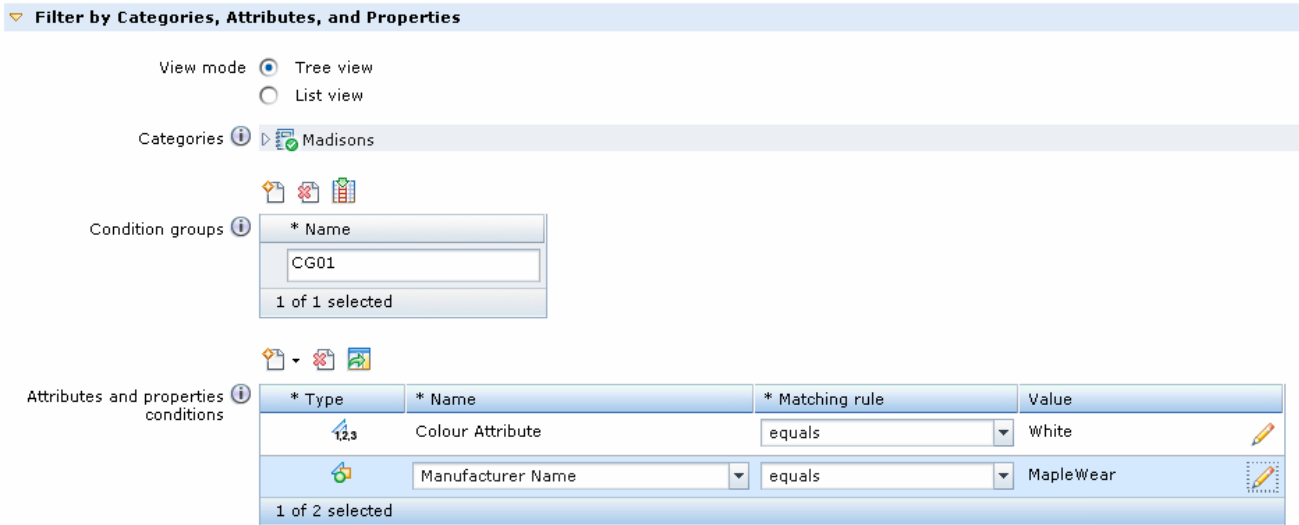

\_\_\_ e. Select **CG01** and create the same conditions as catalog filter 1.

1) Create the first condition by clicking the New Icon to create a new attribute condition.

a) Specify 'colour' as the keyword in the pop-up box.

b) Select **equals** as the operator.

- c) Select **white** as the value.
- 2) Create the second condition by clicking on the New Icon to create a new property condition.
  - a) Select **Manufacturer Name** as the name of the condition.
  - b) Select **equals** as the property.
  - c) Specify the value as **MapleWear**.

\_\_\_ f. Save and Close the filter.

\_\_\_ 6. Create catalog filter 3 (**CF03**) to include only blue and pink skirts in the **Apparel** category. Specify the following values for the fields of the new filter.

\_\_\_ a. **Name:** CF03

\_\_\_ b. **Description:** Include blue and pink skirts in the Apparel category.

\_\_\_ c. Exclude entire catalog, since otherwise everything is implicitly included.

\_\_\_ d. Include **Apparel** category.

\_\_\_ e. Create a new condition group **CG01**.

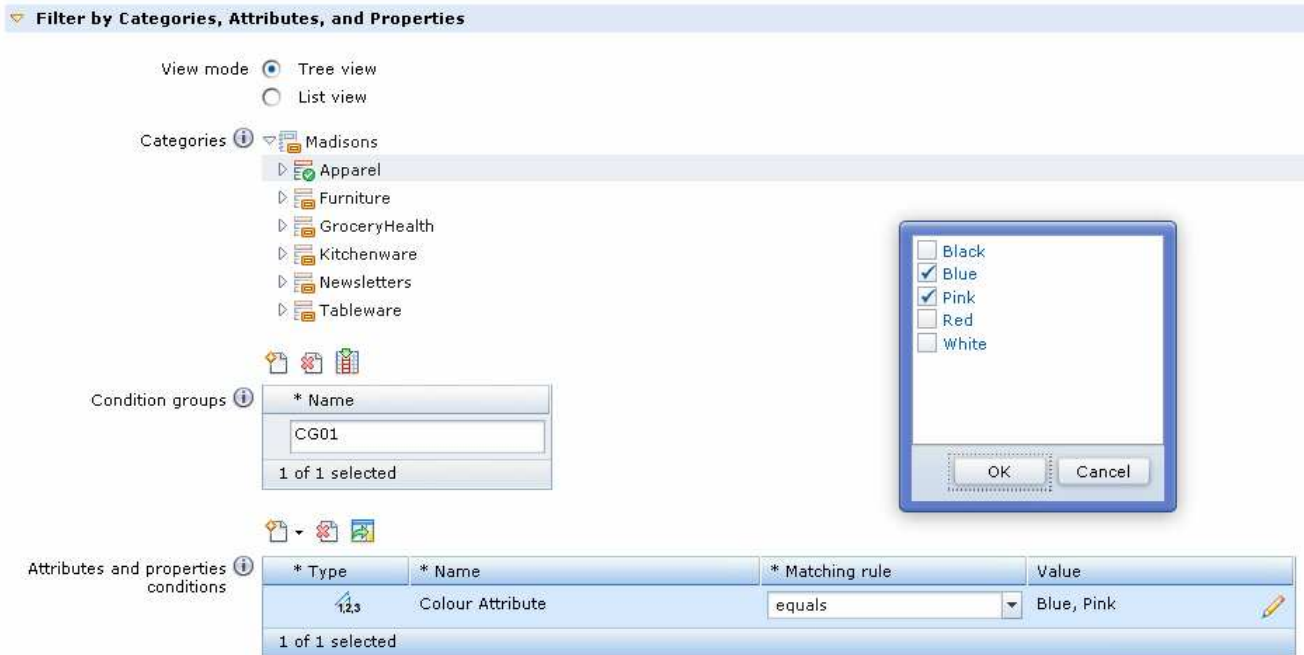

\_\_\_ f. Create a new attribute condition.

1) Specify 'colour' as the keyword in the pop-up box.

2) Select **equals** as the operator.

3) Select **Blue, Pink** as the values.

\_\_\_ g. Save and Close the filter.

\_\_\_ 7. By the completion of this part you have created three catalog filters.

Filter Name	Description
CF01	Include either white or MapleWear products.
CF02	Include white AND MapleWear products
CF03	Include blue and pink skirts in the Apparel category.

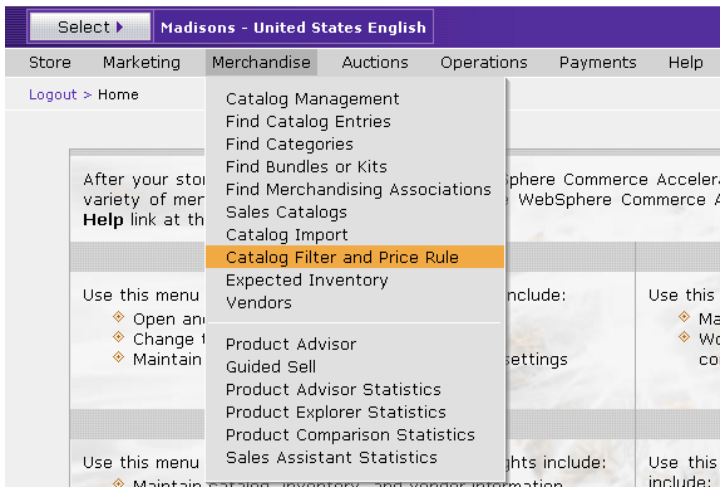

## Part 6: Assign catalog filters and verify results

In this part of the lab, you will assign and verify the catalog filters you have created.

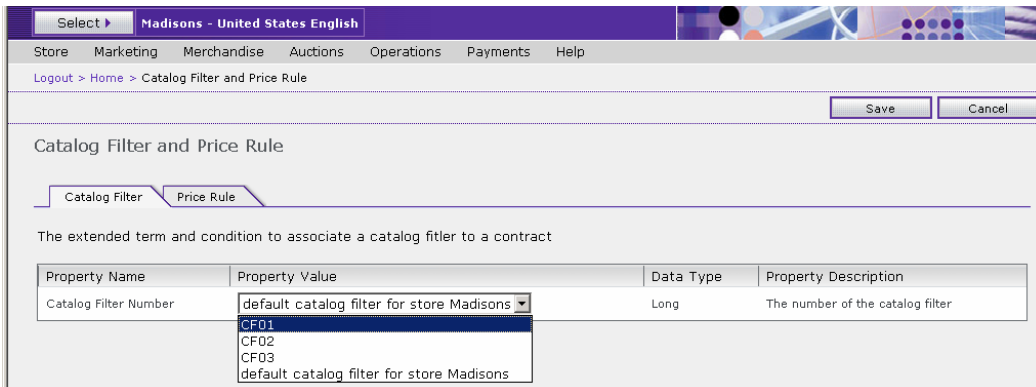

- \_\_\_ 1. As a reminder, here are the catalog filters you created.

Filter Name	Description
CF01	Include either white or MapleWear products.
CF02	Include white AND MapleWear products
CF03	Include blue and pink skirts in the Apparel category.

- \_\_\_ 2. Launch Accelerator using the link provided in the hintsandtips.html **Useful URLs** section.
- \_\_\_ 3. Select **Madisons** store from the store list.
- \_\_\_ 4. Select **Merchandise > Catalog Filter and Price Rule**.

- \_\_\_ 5. Select and assign **CF01** from the drop down menu of catalog filters. Click **Save**.

- \_\_\_ 6. Launch the **Madisons** store to verify the results of **CF01**.

- \_\_\_ a. Note that both Furniture and Apparel categories appear, since you only included white products and MapleWear products. Since catalog filters search on both defining and description attribute dictionary attributes, the white Colour attribute you assigned to the Fabric sofa gets picked up.
- \_\_\_ b. Navigate to the **Apparel** category. Since all Apparel is manufactured by MapleWear, all subcategories and product entries should be available.

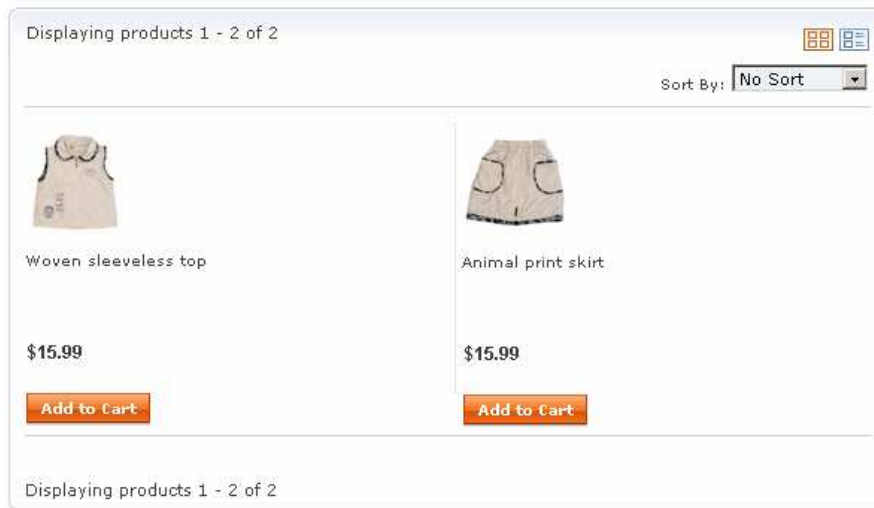

- \_\_\_ c. Try searching for other items from the catalog to ensure that they are excluded.

- \_\_\_ 7. Repeat steps 3-6 to assign catalog filter 2 (**CF02**).
- \_\_\_ 8. Verify results on storefront by re-launching the Madisons store. To ensure you get a fresh session, close all browsers and open the Madisons store again.

- \_\_\_ a. Note that again only Apparel appear, but since you only included entries that are both white and is a MapleWear product, only the Girls Dresses and Skirts sub-category appears.
- \_\_\_ b. Navigate to the Apparel category; you should only see the following **white** Apparel product.

- \_\_\_ c. Try searching for other catalog entries to ensure they are excluded.
- \_\_\_ 9. Repeat steps 3-6 to assign catalog filter 3 (**CF03**).
- \_\_\_ 10. Verify results on storefront by re-launching the Madisons store. To ensure you get a fresh session, close all browsers and open the Madisons store again.
  - \_\_\_ a. Note that only Apparel appears, since you only included products within the Apparel category that are either Blue or Pink.
  - \_\_\_ b. Navigate to the **Girls Dresses and Skirts** category.

The screenshot shows the MADISONS e-commerce website. At the top, there is a navigation bar with the MADISONS logo, a search bar, and links for Home, Coshopping, Shopping Cart, Advanced Search, Store Locator, and Sign In. Below the navigation bar, there is a red banner with the text "Apparel" and a shopping cart icon showing "Cart: 0 item(s) subtotal: \$0.00".

The main content area is titled "Girls Dresses and Skirts". On the left, there is a sidebar with filters under "Narrow your results by:". The "Colour" filter shows "Blue (2)" and "Pink (2)". The "Size" filter shows "Large (4)", "Medium (4)", "Small (4)", and "Xsmall (4)". Below the filters is a "Customer Support" button with a person icon.

The main product area features a banner for "Adorable dresses for young girls Starting at \$19.99" with an image of a girl in a light blue dress. Below the banner, it says "Displaying products 1 - 4 of 4". There is a "Sort By:" dropdown menu set to "No Sort".

The product listing shows four items in a grid:

Product Name	Price	Action
Denim jumper	\$14.99	Add to Cart
Garden denim jumper	\$17.99	Add to Cart
Pretty in pink	\$29.99	Add to Cart
Flower tiered skirt	\$14.99	Add to Cart

At the bottom of the product listing, it says "Displaying products 1 - 4 of 4".

On the right side of the page, there is a "Compare" section with a "Compare" button and a "Drag products here to compare" instruction. Below that is an "E-mail Newsletter" section with a "Subscribe now!" button and an RSS icon.

## Part 7: Upload catalog filter

In this part of the lab, you will create and upload a filter in the new Catalog Filter and Pricing tool to only include pink products and exclude all else.

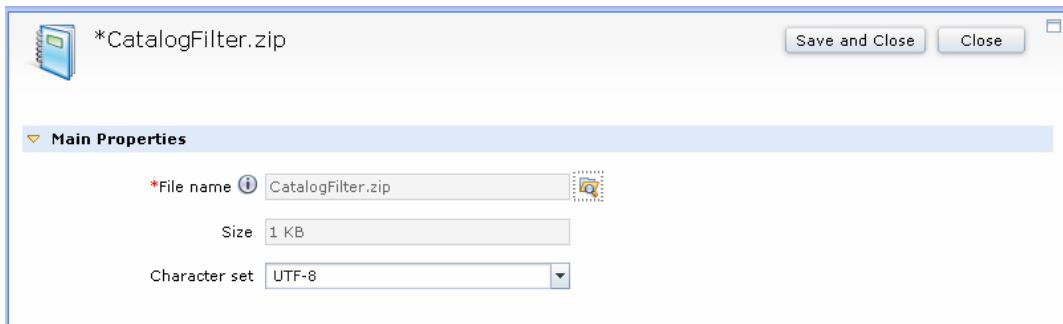

- \_\_\_ 1. Create the following two .csv files:
  - \_\_\_ a. Replace the Madisons store and catalog name.
  - \_\_\_ b. **CatalogFilter.csv**

```
CatalogFilter
CatalogFilterId,CatalogFilterName,StoreIdentifier,CatalogIdentifier,Usage,Delete,EnglishDe
scription,FrenchDescription,GermanDescription,ItalianDescription,SpanishDescription,Portug
ueseDescription,SChineseDescription,TChineseDescription,KoreanDescription,JapaneseDescript
ion,RussianDescription,RomanianDescription,PolishDescription
,CF04,<Madisons>,<Madisons>,Buyer,0,Only include pink products,,,,,,,,,,,,,
```

- \_\_\_ c. **CatalogFilterCatentry.csv**

```
CatalogFilterCatentry
CatalogFilterId,CatalogFilterName,StoreIdentifier,CatalogIdentifier,SelectionType,PartNumb
er,Delete
,CF04,<Madisons>,<Madisons>,Include,MW-0027,0
,CF04,<Madisons>,<Madisons>,Include,MW-0024,0
```

- \_\_\_ 2. Create an archive (.zip) file from the two .csv files you just created.
- \_\_\_ 3. Start your WebSphere Commerce application or test server.
- \_\_\_ 4. Launch Management Center using the URL **https://<WC\_HOST>:8000/lobtools**.
- \_\_\_ 5. Open the **Catalog Filter and Pricing** tool.
- \_\_\_ 6. Upload catalog filter 4 (**CF04**).
  - \_\_\_ a. Select on the **New > Catalog Filter Upload**.
  - \_\_\_ b. Browse for the archive file that you created.

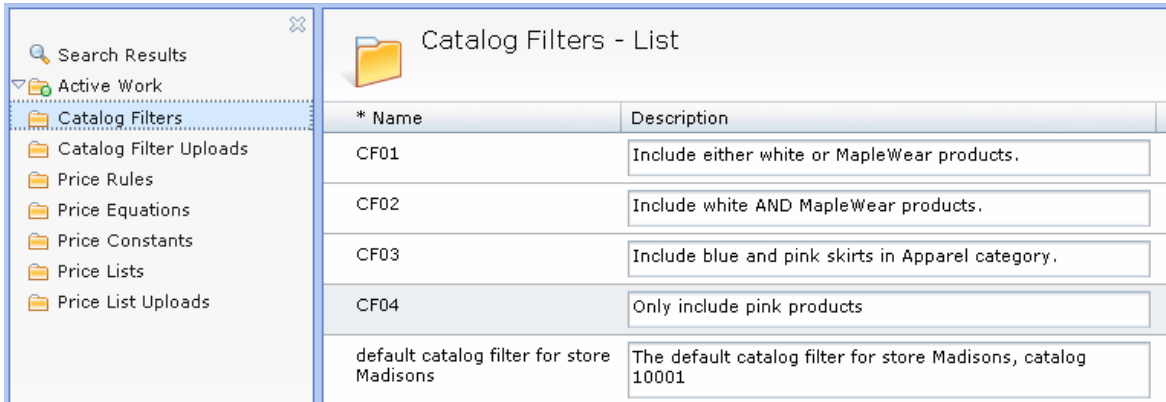

- \_\_\_ c. Click **Save and Close**.

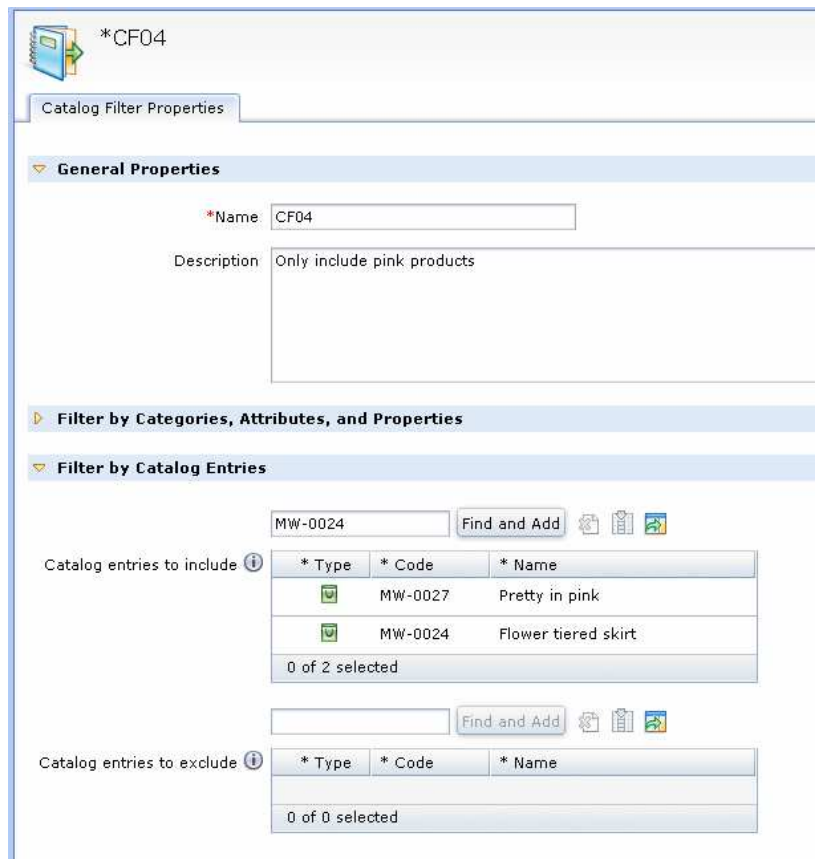

- \_\_\_ 7. Ensure that the upload is successful.

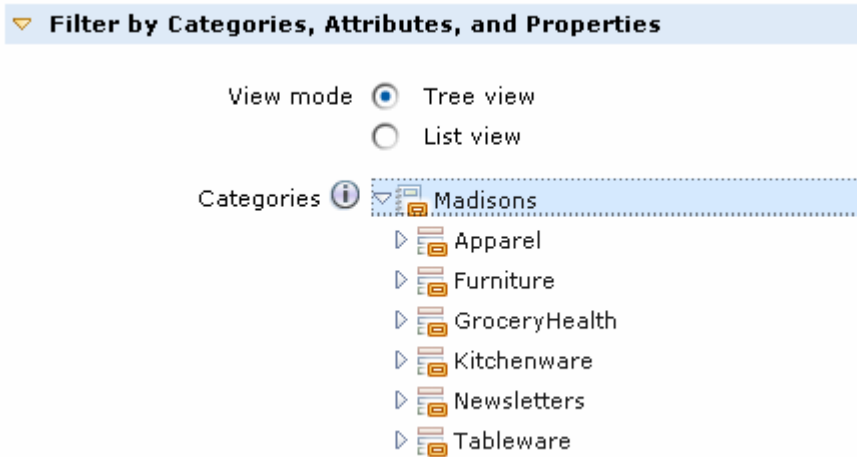

\_\_\_ 8. View all Catalog Filters.

\_\_\_ 9. Open and view the CF04 to verify that all pink products are included.

- \_\_\_ 10. You need to modify the catalog filter to explicitly exclude everything else so that only the following two pink products are included.
- \_\_\_ a. Open the Filter by Categories, Attributes, and Properties tab
  - \_\_\_ b. Exclude the entire Madisons catalog
  - \_\_\_ c. Save and close.

## Part 8: Assign catalog filter and verify results

In this part of the lab, you will assign the uploaded catalog filter to the store and verify the results on the storefront.

- \_\_\_ 1. Launch Accelerator.
- \_\_\_ 2. Select **Madisons** store from the store list.
- \_\_\_ 3. Select **Merchandise > Catalog Filter and Price Rule**.
- \_\_\_ 4. Select and assign **CF04** from the drop down menu of catalog filters. Click **Save**.

Property Name	Property Value	Data Type	Property Description
Catalog Filter Number	CF03	Long	The number of the catalog filter
	CF01		
	CF02		
	CF03		
	CF04		
	default catalog filter for store Madisons		

- \_\_\_ 5. Launch the **Madisons** store to verify the results of **CF04**. Note: If at any time the filter results are not showing up, complete Part 9: Rebuild search index and then check the results again.

- \_\_\_ a. Note that the only pink products in the catalog are the two skirts in **Apparel > Girls Dresses and Skirts**. All other products and categories should be excluded.

The screenshot shows the Madisons e-commerce website. At the top, there is a navigation bar with the Madisons logo, a search bar, and links for Home, Coshopping, Shopping Cart, Advanced Search, Store Locator, and Sign In. Below the navigation bar, there is a red banner with the text "Apparel" and a shopping cart icon showing "Cart: 0 item(s) subtotal: \$0.00". The main content area is titled "Girls Dresses and Skirts" and features a large banner image of a young girl in a light blue dress with the text "Adorable dresses for young girls Starting at \$19.99". To the left of the main content area, there is a sidebar with a "Narrow your results by:" section containing a "Size" filter with options: Large (2), Medium (2), Small (2), and Xsmall (2). Below the size filter is a "Customer Support" button. To the right of the main content area, there is a "Compare" section with a "Drag products here to compare" instruction and "Clear" and "Compare" buttons. Below the compare section is an "E-mail Newsletter" section with a "Subscribe now!" button and a "Subscribe" button with a RSS icon. The main product listing area displays two products: "Pretty in pink" priced at \$29.99 and "Flower tiered skirt" priced at \$14.99. Each product has an "Add to Cart" button. The listing is sorted by "No Sort" and displays "Displaying products 1 - 2 of 2".

\_\_ b. Search for other products that should be excluded to ensure that they cannot be found.

---

## Part 9: Rebuild the search index

In this part of the lab, you will rebuild the search index in order to pick up the catalog entry filter entries you have uploaded.

\_\_\_ 1. Preprocess your search index data

\_\_\_ a. In the WebSphere Commerce Information Center, navigate to the page:

- 1) <http://publib.boulder.ibm.com/infocenter/wchelp/v7r0m0/index.jsp?topic=/com.ibm.commerce.developer.doc/tasks/tsdsearchbuildpre.htm>

\_\_\_ b. Complete the steps described. Some helpful information is below.

1) The full-path for the load order configuration file is a directory similar to:

a) For runtime: <WC\_installdir>\instances\demo\search\pre-processConfig\MC\_<master\_catalog\_id>\DB2

b) For toolkit: <WCDE\_installdir>\search\pre-processConfig\MC\_<master\_catalog\_id>\Cloudscape

\_\_\_ 2. Build your search index

\_\_\_ a. In the WebSphere Commerce Information Center, proceed to the page:

- 1) <http://publib.boulder.ibm.com/infocenter/wchelp/v7r0m0/index.jsp?topic=/com.ibm.commerce.developer.doc/tasks/tsdsearchbuildindex.htm>

\_\_\_ b. Ensure that your test server is started in Rational Application Developer.

\_\_\_ c. Complete the steps described.

\_\_\_ 3. Republish if your server status is not synchronized for Toolkit.

---

## Part 10: What you did in this exercise

In this tutorial, you explored the new catalog filtering and attribute dictionary capabilities in WebSphere Commerce. You were able to work with attributes using the new attribute dictionary tools in the Management Center. After assigning new attributes to products and creating SKUs from them, you were able to verify the new facets in search navigation from the new attributes you assigned. You then created several types of catalog filters using the new Catalog Filter and Pricing tool. Finally, you were able to assign the filters and verify the results on the storefront.

You should now understand how to complete the following tasks:

- Modify attributes in the attribute dictionary
- Assign new attribute dictionary attributes as defining attributes to products
- Create SKUs from attribute dictionary attributes and values
- View new facets in search navigation based on attributes
- Create catalog filters using Catalog Filter Upload in the Catalog Filter and Pricing tool
- Use attribute dictionary attributes and product properties in catalog filters
- Assign newly created dynamic filters in Accelerator
- Verify results on the storefront after filter assignment
