What this exercise is about

The objective of this lab is to provide step by step instructions for installing WebSphere Business Monitor Development Toolkit V6.1 on Rational Application Developer V7.0 or WebSphere Integration Developer V6.1.

Operating system prerequisites

- Windows Server 2003 Standard SP1
- Windows Server 2003 Enterprise SP1
- Windows XP Professional SP2
- Windows Vista Business
- Windows Vista Ultimate

Lab requirements and software prerequisites

List of software required for the student to complete the lab:

- IBM Installation Manager V1.1.0.1
- Prerequisites for installing the Monitor Toolkit:
 - Rational Application Developer V7.0.0.5 with WebSphere Application Server V6.1.0.13
 - o (or) WebSphere Integration Developer V6.1 with WebSphere Process Server V6.1
- WebSphere Business Monitor Development Toolkit V6.1

What you should be able to do?

At the end of this lab you should be able to:

- Install IBM Installation Manager V1.1.0.1
- Install Rational Application Developer V7.0
 - Update Rational Application Developer 7.0 to version 7.0.0.5
 - Update embedded WebSphere Application Server from V6.1.0.2 to V6.1.0.13
- Install WebSphere Integration Developer V6.1 with WebSphere Process Server V6.1
 - Update WebSphere Integration Developer with an interim fix (iFix001)
- Install WebSphere Business Monitor Development Toolkit V6.1 on Rational Application Developer or WebSphere Integration Developer

Exercise instructions

Some instructions in this lab are Windows[®] operating-system specific. If you plan on running the lab on an operating-system other than Windows, you will need to run the appropriate commands, and use appropriate files (.sh or .bat) for your operating system. The directory locations are specified in the lab instructions using symbolic references, as follows:

Reference variable	Windows location	AIX®/UNIX® location
<rad_home></rad_home>	C:\IBM\SDP70	
<was_home></was_home>	<rad_home>\runtimes\base_v61</rad_home>	
<wid_home></wid_home>	C:\IBM\WID61	
<wps_home></wps_home>	<wid_home>\runtimes\bi_v61</wid_home>	
WOM PROFILE HOME.	<was_home>\profiles\WBMonSrv</was_home>	
<wbm_profile_home></wbm_profile_home>	<wps_home>\pf\WBMonSrv_wps</wps_home>	
<was_abx_home></was_abx_home>	<wbm_profile _home="">\Alphablox_server1</wbm_profile>	
<wps_abx_home></wps_abx_home>	<wbm_profile _home="">\Alphablox_server1</wbm_profile>	

Windows users' note: When directory locations are passed as parameters to a Java[™] program such as EJBdeploy or wsadmin, it is necessary to replace the backslashes with forward slashes to follow the Java convention.

Introduction

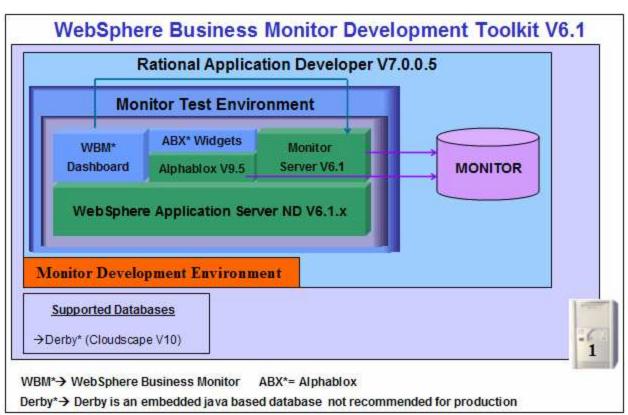

WebSphere Business Monitor Development Toolkit V6.1 enhances the development experience by providing editing, code generation and unit test capability.

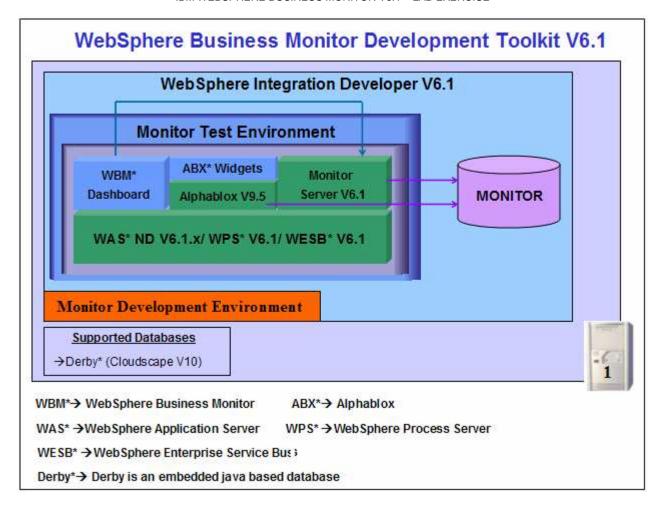

WebSphere Business Monitor Development Toolkit V6.1 provides a separate launchpad based on Common Launchpad program which invokes the "IBM Installation Manager V1.1 to handle the product installation, un-installation and updates. The Common Launchpad provides initial help in the form of a readme file and installation guide.

The Monitor Toolkit consists of two major components. A **Monitor Development Environment**, which includes Monitor Model Editor, Monitor Model Editor documentation and Monitor Application Descriptor components that allows you to create the monitor model for use with WebSphere Business Monitor V6.1. Secondly a **Monitor Test Environment** which is a fully functional Monitor Server including Action Manager, light weight Web dashboard including Alphablox Web dashboard views using embedded Derby as the database environment, allowing you to test the developed monitor model within the development environment before deploying it to the production environment.

The WebSphere Business Monitor Development Toolkit V6.1 offering will be packaged as an extended offering that extends from Rational Application Developer and WebSphere Integration Developer. It can be installed on top of Rational Application Developer V7.0.0.5 and WebSphere Integration Developer V6.1.

IBM Installation Manager V1.1 considers Monitor Development Environment as a mandatory feature, and the Monitor Test Environment as an optional feature. The Monitor Test Environment can be optionally installed provided the WebSphere Application Server V6.1, WebSphere Process Server V6.1 or a WebSphere Enterprise Service Bus test environment is installed and their version levels support the WebSphere Business Monitor V6.1 installation. The following diagrams depict the Monitor Toolkit environment:

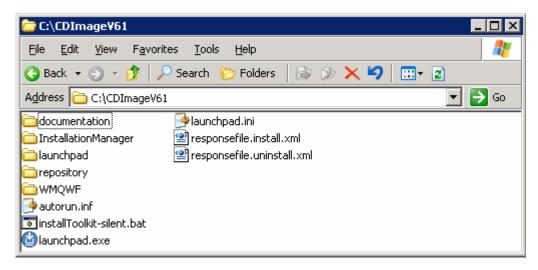

Part 1: Preparing for the Monitor Tool Kit V6.1 Common Launchpad

In this part of the lab, the required software will be obtained and extracted, creating the correct on-disk structure for the WebSphere Business Monitor Development Toolkit Common Launchpad to run.

_ 1. The following are the installation files needed to install the Monitor V6.1 Toolkit

Product Name	File Name
WebSphere Business Monitor V6.1 Development Toolkit for Windows	C1872EN.zip

- 2. Obtain the Monitor Toolkit software and extract in such a way to create the correct on-disk structure for the Launchpad to run
- 2. Extract the Monitor Toolkit archive to a directory (for example C:\CDImageV61) and confirm that the directories and files are extracted correctly; it should appear similar to the picture below:

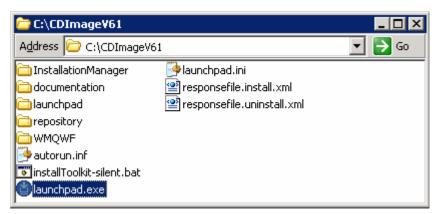

Part 2: Installing Monitor Toolkit V6.1 on IBM Rational Application Developer 7.0.0.5

This part of the lab shows installing the WebSphere Business Monitor Development Toolkit V6.1 using the Common Launchpad program on the Rational Application Developer V7.0.0.5 with WebSphere Application Server V6.1.0.13 as the test environment. The Common Launchpad program uses IBM Installation Manger V1.1 to install the Monitor Toolkit components such as the **Monitor Test Environment** and **Monitor Development Environment** which includes the **Monitor Model Editor**.

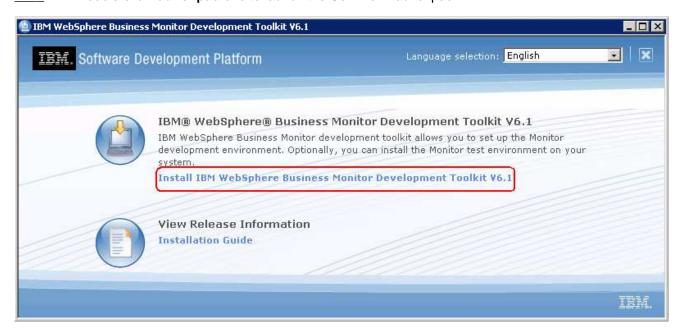

<u>Prerequisite:</u> - Before proceeding further, ensure that the Rational Application Developer V7.0 is installed and upgraded to Version 7.0.0.5. Also ensure that the WebSphere Application Server profile is upgraded to Version 6.1.0.13. The instructions for installing and upgrading Rational Application Developer V7.0 are available at the end of this document at "Task1: Installing Rational Application Developer V7.0"

Follow the instructions below to complete the WebSphere Business Monitor Development Toolkit V6.1 installation:

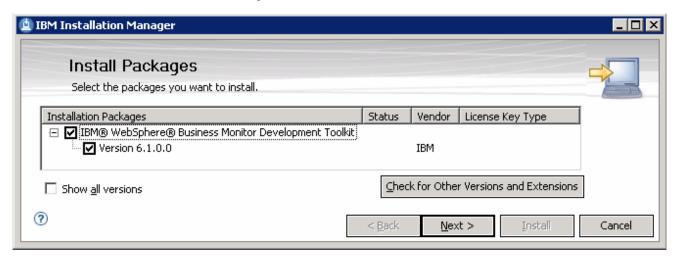

_____ 1. Navigate to the directory where the correct on-disk structure for the installation image was created

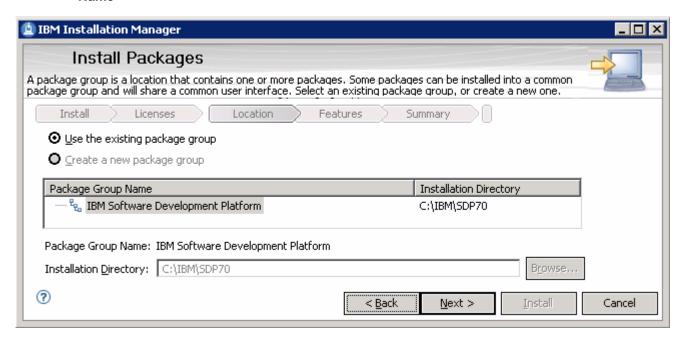

2. Double-click **launchpad.exe** to launch the Common Launchpad

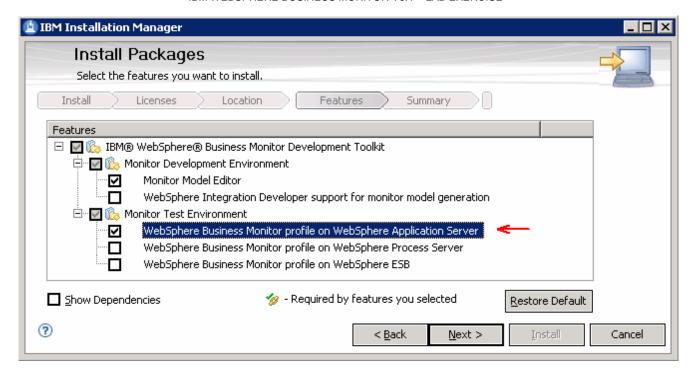

_____ 3. Click on 'Install IBM WebSphere Business Monitor Development Toolkit V6.1'. This action launches the Installation Manager V1.1 as shown below:

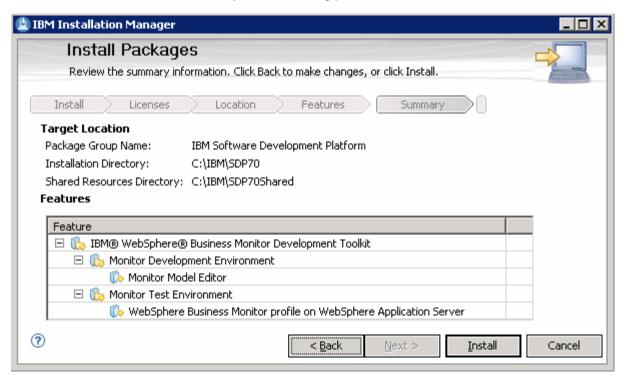

- 4. Ensure the check boxes next to IBM WebSphere Business Monitor Development Toolkit (Version 6.1.0.0) is selected and click Next
- 5. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
- ____ 6. In the following panel, select the **IBM Software Development Platform** as the **Package Group** Name

- ____ 7. Click Next
- 8. In the following panel, ensure the check boxes next to Monitor Model Editor (mandatory) and WebSphere Business Monitor profile on WebSphere Application Server are selected

- Click Next
- ____ 10. Review the installation summary in the following panel

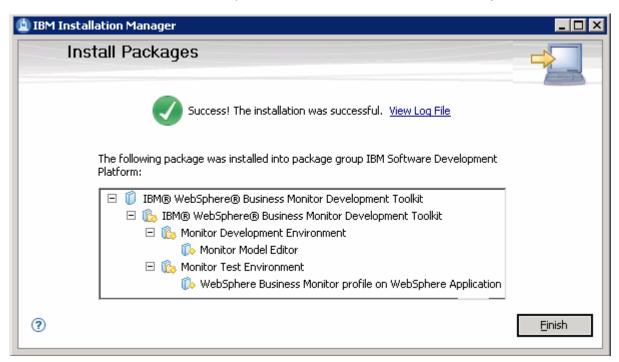

_ 11. Click Install. The WebSphere Business Monitor Development Toolkit V6.1 installation progresses

Installing. [(1%) Installing Monitor test environment]

Pause Download Cancel

12. Once the installation is complete, review the installation status summary

__ 13. Click Finish

Part 3: Installing Monitor Toolkit V6.1 on WebSphere Integration Developer V6.1

This part of the lab shows installing the WebSphere Business Monitor Development Toolkit V6.1 using the Common Launchpad program on the WebSphere Integration Developer V6.1 with WebSphere Process Server V6.1 profile. The Common Launchpad program uses IBM Installation Manger V1.1 to install the Monitor Toolkit components such as the **Monitor Test Environment** and **Monitor Development Environment** which includes the **Monitor Model Editor**.

<u>Prerequisite</u>: - Before proceeding further, ensure that the WebSphere Integration Developer V6.1 is installed. Also ensure that the WebSphere Process Server V6.1 profile is installed. The instructions for installing WebSphere Integration Developer V6.1 are available at the end of this document at "<u>Task2</u>: <u>Installing</u> <u>WebSphere Integration Developer V6.1</u>"

Follow the instructions below to complete the WebSphere Business Monitor Development Toolkit V6.1:

____ 1. Navigate to the directory where the correct on-disk structure for the installation image was created

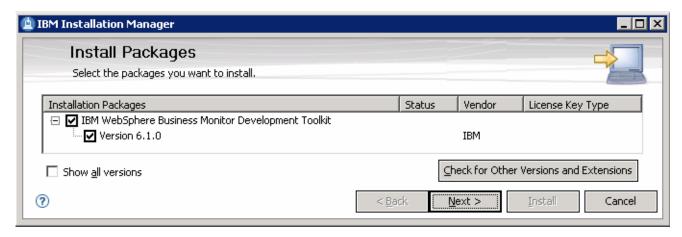

2. Double-click launchpad.exe to launch the Common Launchpad

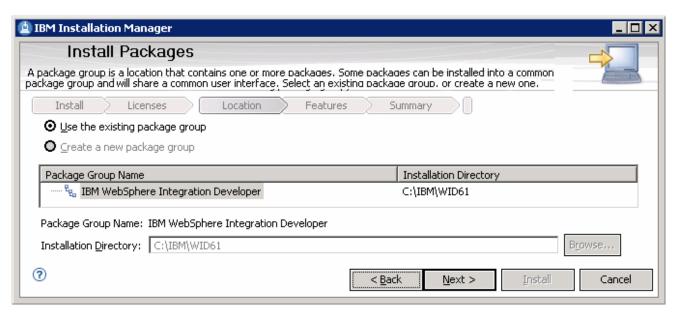

3. Click on 'Install IBM WebSphere Business Monitor Development Toolkit V6.1'

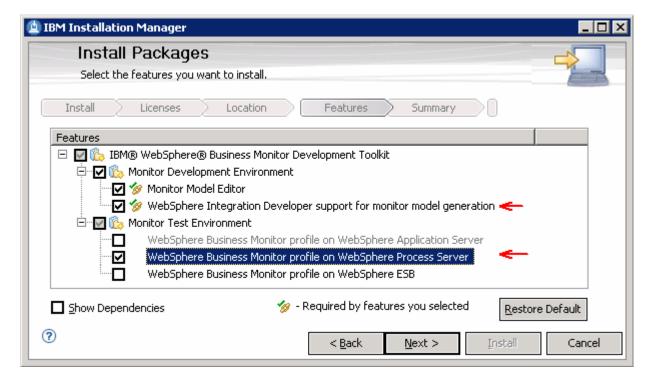

4. This launches the IBM Installation Manager V1.1 installation wizard. Ensure that the check box next to IBM WebSphere Business Monitor Development Toolkit (Version 6.1.0) is selected

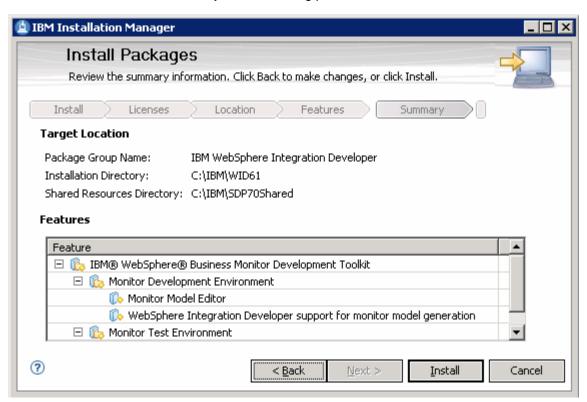

- ____ 5. Click **Next**
- _____ 6. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
- _____ 7. In the following panel, select the IBM Software Development Platform as the Package Group Name

- Click Next
- _____9. In the following panel, select the check boxes next to the following features:
 - __ a. Monitor Development Environment
 - Monitor Model Editor (Mandatory)
 - WebSphere Integration Developer support for monitor model generation
 - __ b. WebSphere Business Monitor profile on WebSphere Process Server

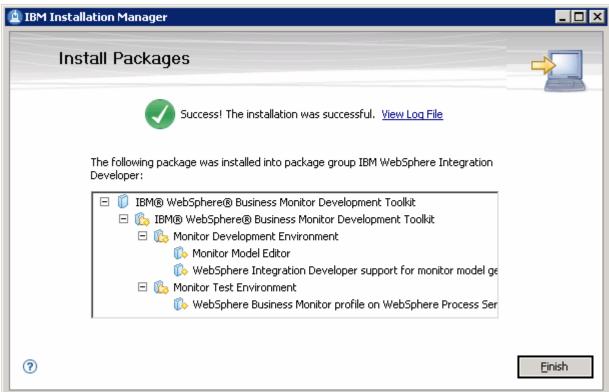

- ____ 10. Click Next
- ____ 11. Review the installation summary in the following panel

__ 12. Click Install to continue with the instillation. The WebSphere Business Monitor Development Toolkit V6.1 installation progresses

Installing, [(1%) Installing Monitor test environment]

Pause Download Cancel

13. Click **Finish** when the installation is complete

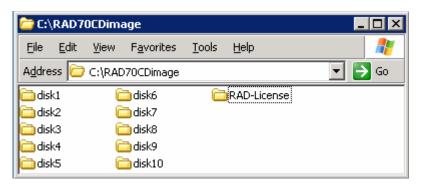

Task 1: Installing Rational Application Developer V7.0.0.5

This part of the lab provides step-by-step instructions for installing the Rational Application Developer V7.0 using the Common Launchpad. When you choose to install the Rational Application Developer, the Common launchpad automatically installs IBM Installation Manager V1.0 if not already installed. Also, the Rational Application Developer V7.0 will be updated to version 7.0.0.5. The base Rational Application Developer V7.0 installs a WebSphere Application Server V6.1.0.2 which is not an accepted level for installing WebSphere Business Monitor V6.1. You will manually update the WebSphere Application Server V6.1.0.2 with a fix pack 13 using the WebSphere Update Installer.

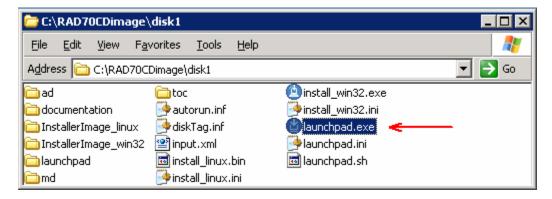

____ 1. The following are the installation files needed to install the Rational Application Developer V7.0

RAD_v7.0_Part_1.zip	RAD_v7.0_Part_6.zip	
RAD_v7.0_Part_2.zip	RAD_v7.0_Part_7.zip	
RAD_v7.0_Part_3.zip	RAD_v7.0_Part_8.zip	
RAD_v7.0_Part_4.zip	RAD_v7.0_Part_9.zip	
RAD_v7.0_Part_5.zip	RAD_v7.0_Part_10.zip	
RAD_v7.0_Activation_Kit.zip		

- 2. WebSphere Application Server fix pack 13 and Update Installer
 - 6.1.0-WS-WAS-WinX32-FP0000013.pak
 - download.updii.61013.windows.ia32.zip
- _____ 3. Obtain the Rational Application Developer V7.0 software and extract in such a way to create the correct on-disk structure for the Common Launchpad to run without any interruption during the installation.
- 4. Extract all the Rational Application Developer V7.0 installation archives to a directory (for example C:\RAD70CDimage) and confirm that the directories and files are extracted correctly; it should appear similar to the picture below:

____ 5. Navigate to the **disk1** directory

_____ 6. Double click **launchpad.exe** to run the Common Launchpad

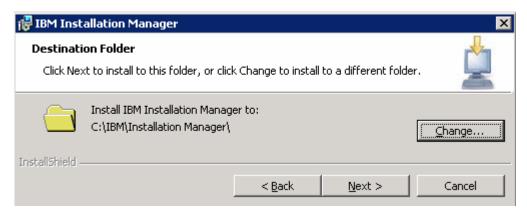

- _____ 7. On the Common Launchpad, click Install IBM Rational Application Developer V7.0 link
- _____ 8. The InstallShield Wizard for IBM Installation Manager V1.0 is launched

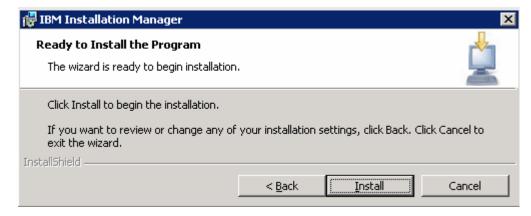

Note: The InstallShield Wizard for IBM Installation Manager V1.0 is launched if it is not installed at this time. Follow the instructions below to install the IBM Installation Manager V1.0

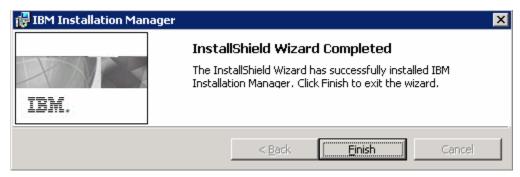

- _____ 9. Read the instructions carefully on the welcome panel and click **Next**
- ____ 10. In the following panel, read the license agreement. If you agree to the terms, select the radio button next to "I accept the terms in the license agreement" and Click Next
- ____ 11. In the following panel, click the Change button to modify the default "Install IBM Installation Manager to:", location to C:\IBM\Installation Manager

- Click Next
- ____ 13. The following panel gives an opportunity to review or change any installation settings. Click the **Back** button if you need to change the settings

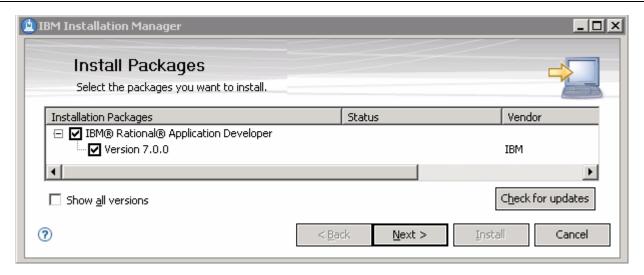

- ____ 14. Click **Install** to continue with the installation. The IBM Installation Manager V1.0 installation progresses and takes a few seconds to install.
 - __ 15. Read the installation status summary, once the installation is complete

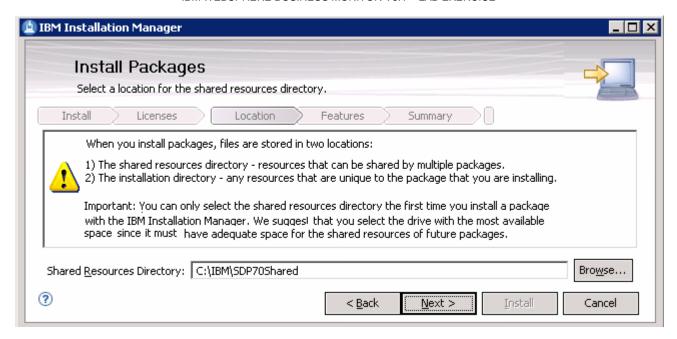

- Click Finish
- ____ 17. The IBM Installation Manager V1.0 is launched as shown below:

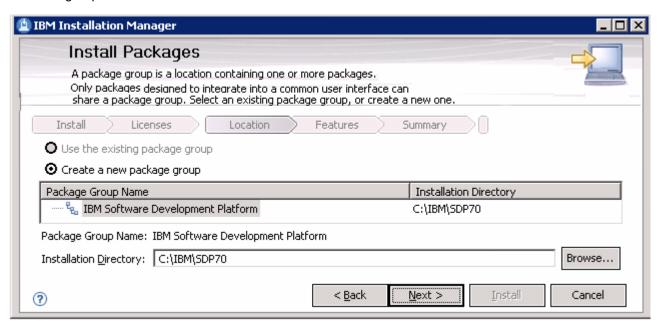

Note: You can always launch the IBM Installation Manger from Start \rightarrow Programs \rightarrow IBM Installation Manager \rightarrow IBM Installation Manager.

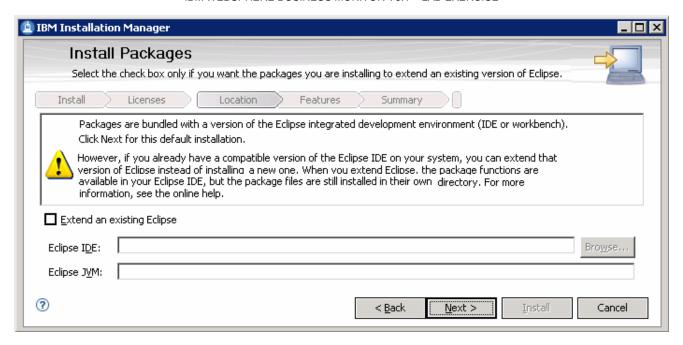

- ____ 18. Ensure the check box next to **IBM Rational Application Developer** (**Version 7.0.0**) is selected and click **Next**
- ____ 19. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
- 20. In the following panel, read the instructions carefully and click the Browse button to set a different shared resources directory to C:\IBM\SDP70Shared

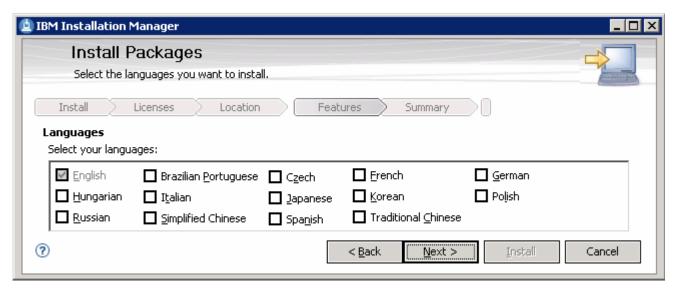

- 21. Click Next
- 22. In the following panel, click the Browse button to set a different installation directory for the package group to C:\IBM\SPD70

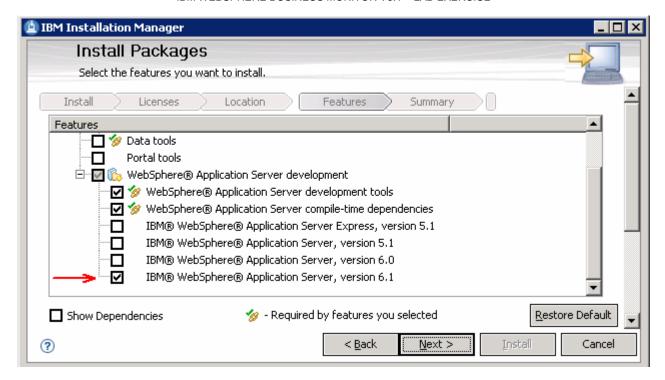

- Click Next
- ____ 24. Accept the defaults in the following panel

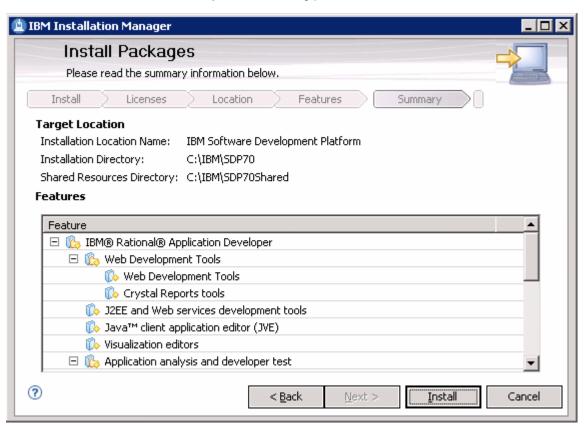

- ____ 25. Click Next
- ____ 26. In the following panel, select the check box next to the language you want to install

- ___ 27. Click Next
- 28. In the following panel, accept the default features selected for installation and ensure that the WebSphere Application Server V6.1 development test server is selected for installation

- 29. Click Next
- ____ 30. Review the installation summary in the following panel

_ 31. Click **Install** to continue with the installation

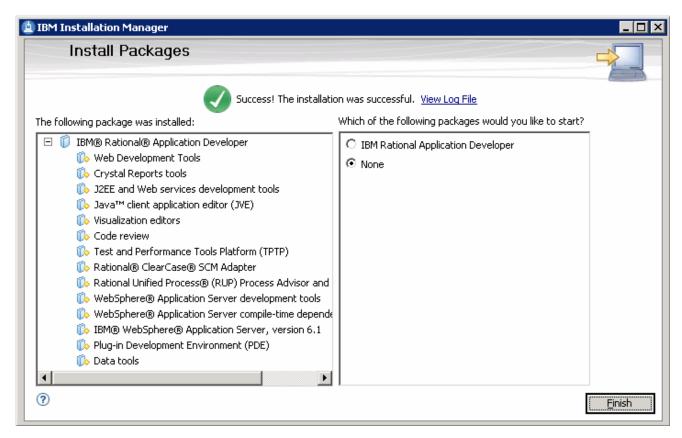

____ 32. The Rational Application Developer V7.0 installation progresses as shown below:

Installing IBM® Rational® Application Developer. Collecting for org.eclipse.tptp.platform.report.feature

Pause Download

Cancel

____ 33. Once the installation is complete, review the packages installed and select the radio button next to **None**

_____ 34. Click Finish. The Rational Application Developer V7.0 installation is complete

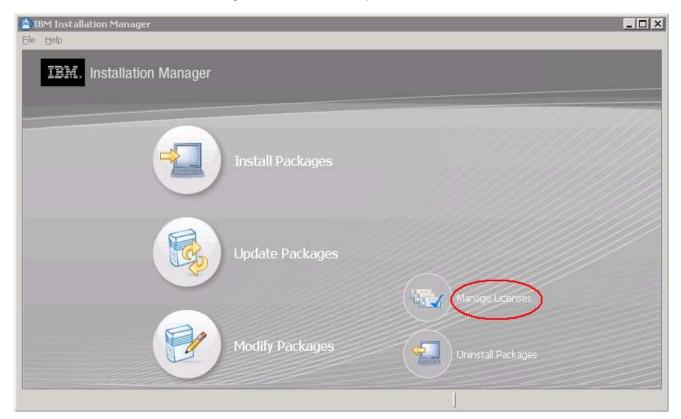

Activate the license and upgrade Rational Application Developer

Rational Application Developer V7.0 must be upgraded to a version that is supported by the WebSphere Business Monitor Development Toolkit V6.1. This is done with the help of IBM Installation Manager. Also you will be activating the Rational Application Developer License.

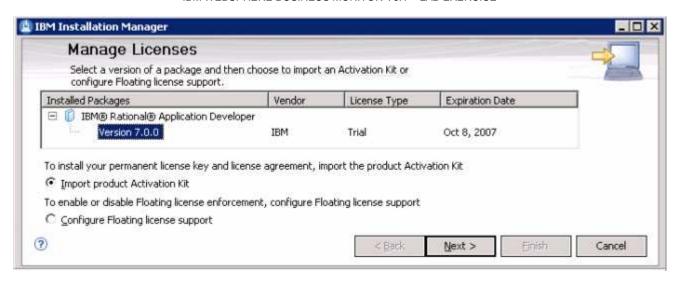

____ 1. Launch the IBM Installation Manager from Start → Programs → IBM Installation Manager → IBM Installation Manager

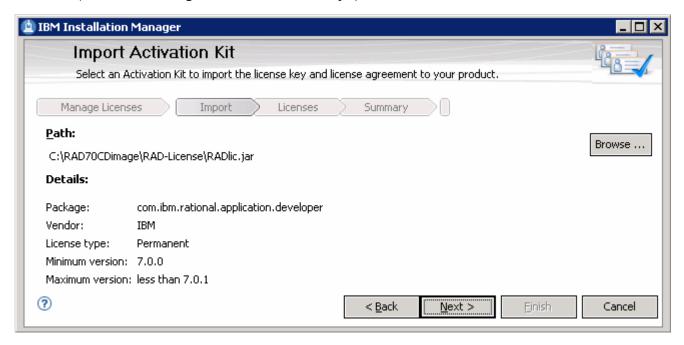

____ 2. The IBM Installation Manager's Common Launchpad is launched

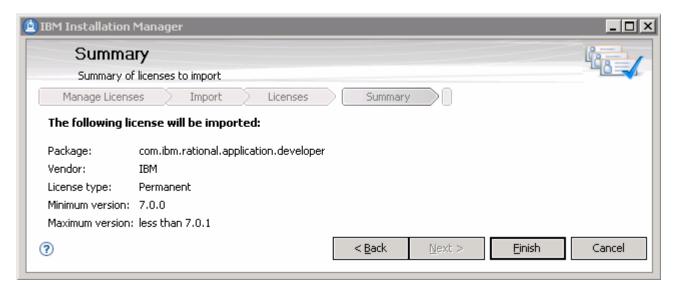

- ____ 3. Click **Manage License** to activate the product
- _____4. In the following panel, select the radio button next to "Import the Product Activation kit"

- ____ 5. Click **Next**
- _____ 6. In the following panel, click the **Browse** button to navigate to folder where the installation files are located and select the **RADlic.jar** from the **RAD-License** folder to import the Activation kit. (C:\RAD70CDimage\RAD-Licence\RADlic.jar)

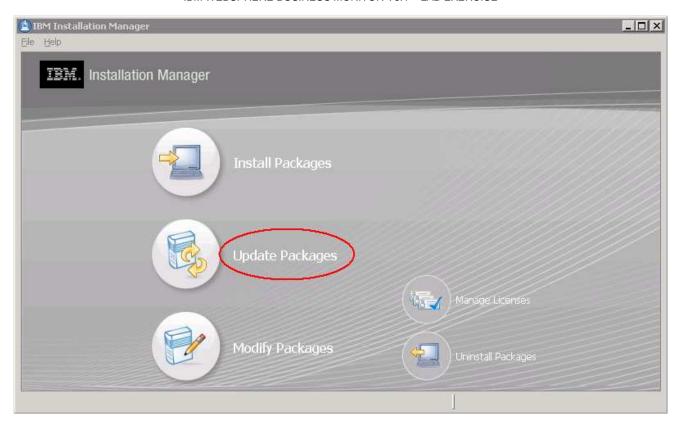

- __ 7. Click **Next**
- 8. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
- 9. Review the licenses to import summary in the following panel

____ 10. Click Finish. The Rational Application Developer V7.0 activation progresses

- ____ 11. After the Activation Kit is imported, click **Finish** to exit Installation Manager. Rational Application Developer V7.0 is ready for use
- 12. Now that the Rational Application Developer V7.0 license is activated, click on **Update packages** to upgrade the Rational Application Developer to version 7.0.0.5 in the IBM Installation Manager's Common launchpad

Note: On clicking the Update packages link, the Installation Manager may prompt for an upgrade if necessary. Click the **Yes** button if prompted to update IBM Installation Manager.

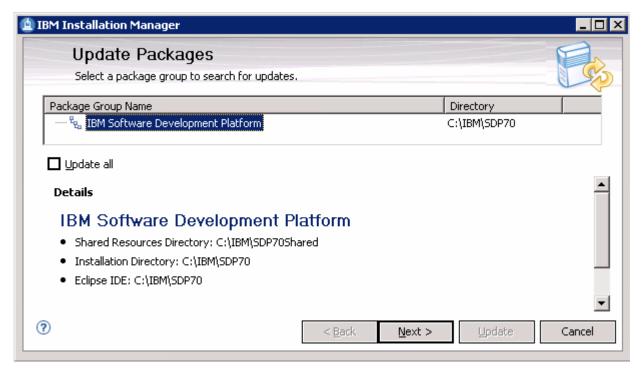

____ 13. Once the upgrade is complete, a warning message is prompted to re-launch the Installation Manager to finalize the installation.

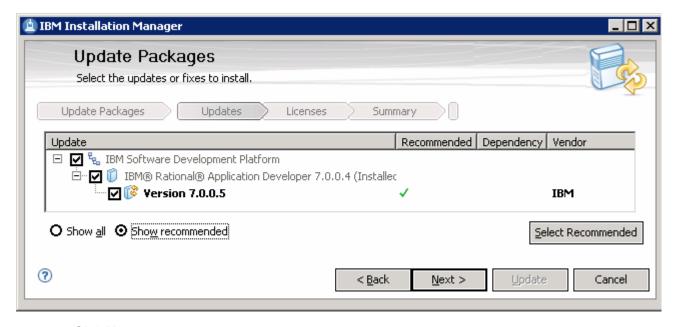

__ 14. Click **OK** to re-launch the Installation Manager

- _____ 15. Now click the **Update packages** link again on the Installation Manager's common launchpad
- _____ 16. The IBM Installation Manager is launched and prompts for updating the existing Rational Application Developer packages

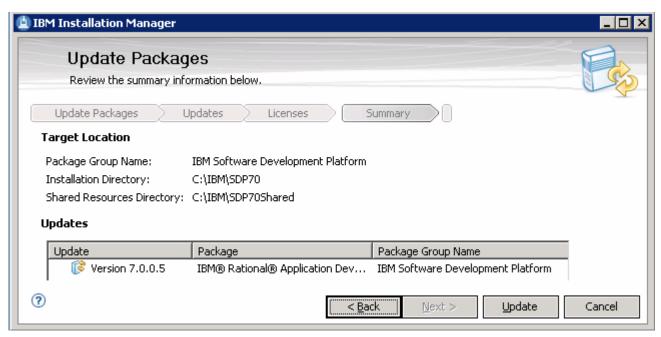

- 17. Select IBM Software Development Platform as the Package Group Name and Click Next
- ____ 18. In the following panel, ensure the check box next to **Version 7.0.0.5** is selected

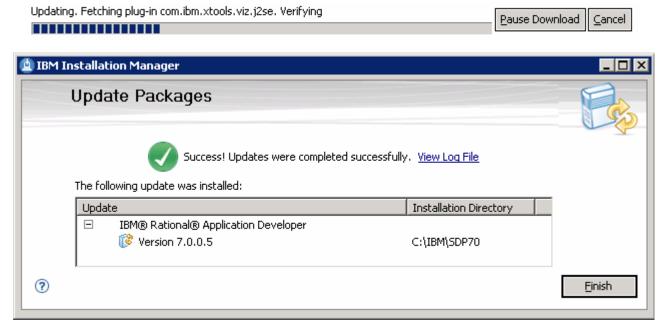

- ____ 19. Click Next
- 20. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next

____ 21. Review the update summary in the following panel

____ 22. Click **Update**. The Rational Application Developer V7.0 updates to V7.0.0.5 as shown below:

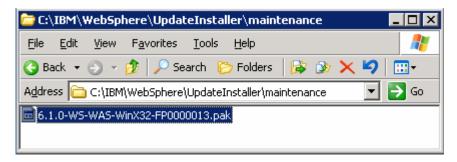

23. After the update is complete, click **Finish** to exit Installation Manager. The Rational Application Developer V7.0 is upgraded to Version 7.0.0.5

Update WebSphere Application Server V6.1.0.2 to V6.1.0.13

Now that you have upgraded Rational Application Developer V7.0 to version 7.0.0.5, update the embedded WebSphere Application Server installation to version 6.1.0.13 using the new WebSphere software update installer.

<u>Prerequisite</u>: - Before proceeding further, install the WebSphere Application Server update installer. The instructions for the same can be found at: "<u>Appendix 1: Installing the Update Installer for WebSphere Software</u>"

1. Obtain and copy the WebSphere Application Server V6.1 fix pack file; 6.1.0-WS-WAS-WinX32-FP0000013.pak to the maintenance directory located at C:\IBM\WebSphere\UpdateInstaller, that is the Update Installer installation location

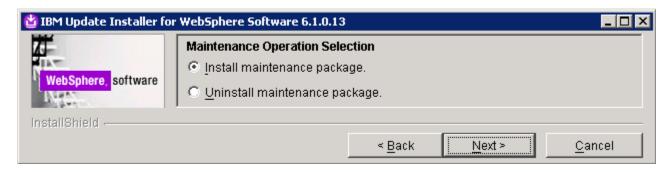

- _____ 2. Launch the WebSphere Application Server update installer from the start menu
- ____ 3. Read the instructions carefully on the Welcome page

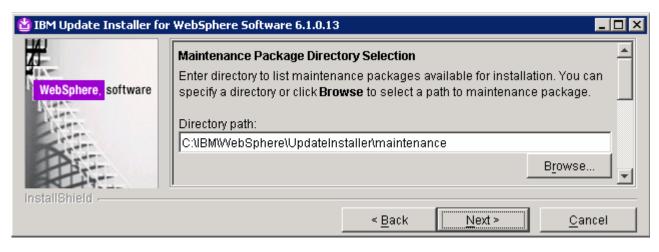

- Click Next
- 5. In the following panel, ensure the embedded WebSphere Application Server V6.1 installation location is correct or else click **Browse** button to se the installation location

- Click Next
- 7. In the following panel, select the radio button next to Install maintenance package

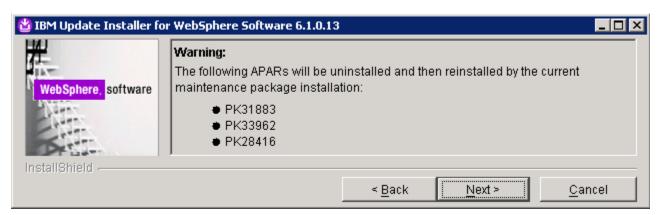

- ____ 8. Click Next
- 9. In the following panel, click the **Browse** button to select the **maintenance** packages directory

- Click Next
- _____ 11. In the following panel, click the "Select the recommended updates" button. This action selects only the required for the current WebSphere Application Server installation

- Click Next
- ____ 13. In the following panel, read the 'Warning' message carefully

14. Click Next. Review the installation summary and click Next to continue the installation. The fix pack installation progresses

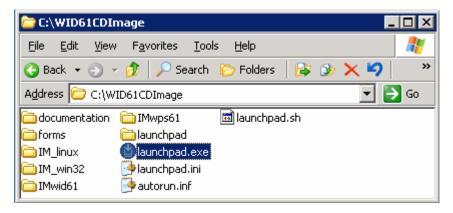

_____ 15. Click **Finish** to exit the Update Installer once the installation is complete

Task 2: Installing WebSphere Integration Developer V6.1

This part of the lab provides step-by-step instructions for installing the WebSphere Integration Developer V6.1 using IBM Installation Manager V1.1.

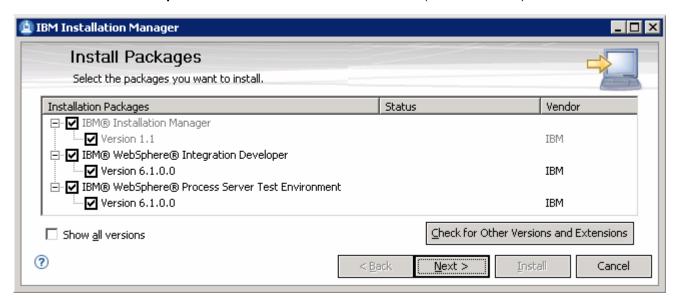

- 1. The following are the installation files needed to install the WebSphere Integration Developer V6.1a. WID_v61_1.zip
 - __ b. WID_v61_2.zip
 - __ c. ProcessServer_v61_win.zip
 - __ d. wid_6.1.0.0_ifix001.zip
- 2. Obtain the WebSphere Integration Developer V6.1 software and extract in such a way to create the correct on-disk structure for the Common Launchpad to run with out any interruption during the installation
- _____ 3. Extract both the WID_v61_1.zip and WID_v61_2.zip installation archives to a directory (for example C:\WID61CDimage) and the ProcessServer_v61_win.zip archive to the same directory (for example C:\WID61CDimage). Click Yes to All to overwrite the contents. Confirm that the directories and files are extracted correctly; it should appear similar to the picture below:

4. Double-click launchpad.exe to launch the Common Launchpad

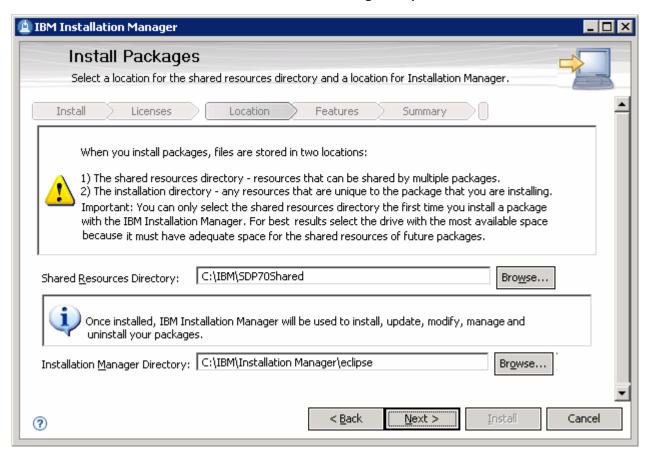

- 5. Click 'Install IBM WebSphere Integration Developer V6.1' link to launch the Installation Manager
- 6. The IBM Installation Manager V1.1 is launched. Ensure that the check boxes next to IBM Installation Manager (Version 1.1), IBM WebSphere Integration Developer (Version 6.1.0.0) and IBM WebSphere Process Server Test Environment (Version 6.1.0.0) are selected

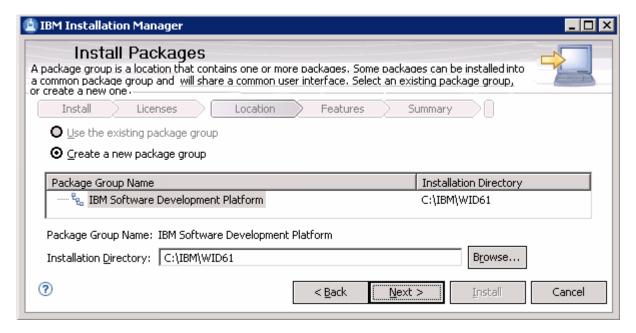

Note: If the Installation Manager is already installed at this time, it is launched automatically and you are not prompted for an installation. However, you may be prompted for an update to the latest version.

- Click Next
- _____ 8. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
 - ___ 9. In the following panel, read the instructions carefully and follow the instructions below:
 - __ a. Click the **Browse** button for 'Shared Resources Directory' to set the shared resources directory location to C:\IBM\SDP70Shared
 - __ b. Click the Browse button for 'Installation Manager Directory' to set the Installation Manager installation location to C:\IBM\Installation Manager\eclipse

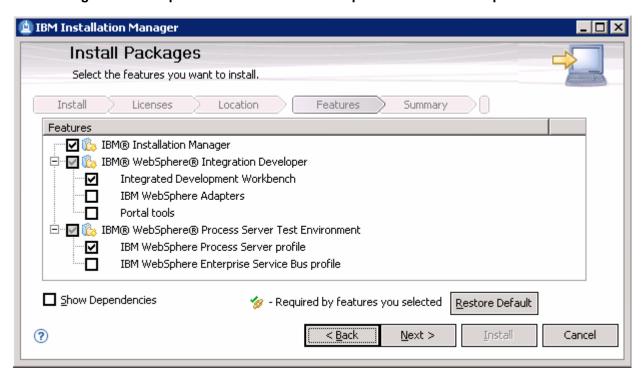

Note: The Installation Manager Directory field is dimmed as though not available if it was already installed. Remember that only one instance of an Installation Manager can be installed.

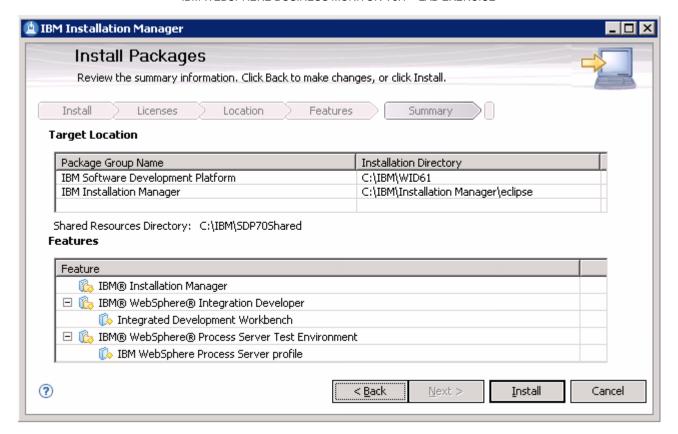

- Click Next
- 11. In the following panel, ensure the radio button next to 'Create a new package group' is selected and click the Browse button to set the installation directory for the package group and set to C:\IBM\WID61

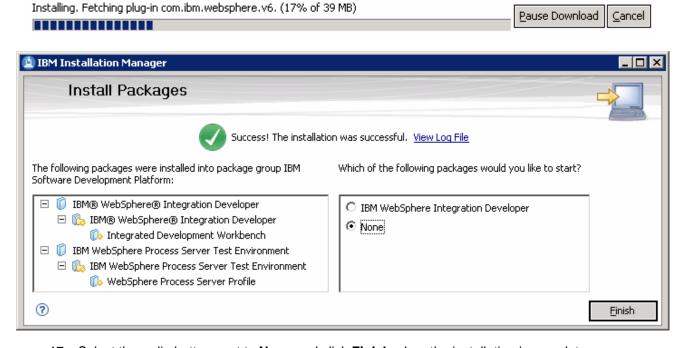

- Click Next
- 13. In the following feature selection panel, select the check boxes next to IBM Installation Manager, Integrated Development Workbench and WebSphere Process Server profile

- 14. Click Next
- _____ 15. Review the installation summary in the following panel

____ 16. Click **Install** to continue with the installation. The installation progresses

_ 17. Select the radio button next to **None** and click **Finish** when the installation is complete

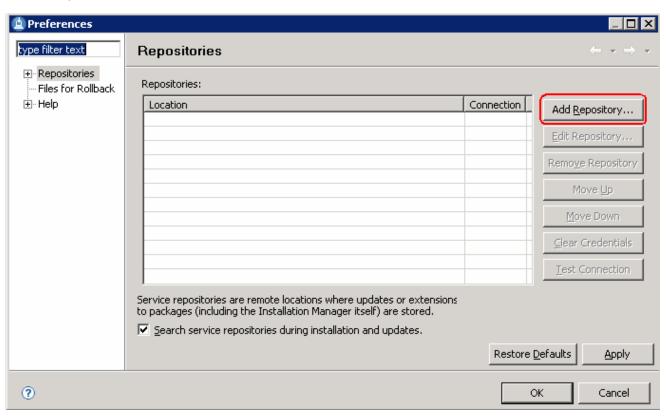

Updating the WebSphere Integration Developer V6.1 with iFix001

In this sub section, the WebSphere Integration Developer V6.1 will be updated with an interim fix. Close the WebSphere Integration Developer if it is running at this time.

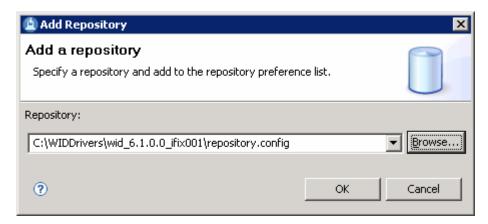

- _____ 1. Obtain the interim fix 001 and extract it to a temporary directory.
 - __ a. wid_6.1.0.0_ifix001.zip
- ____ 2. Now launch the Installation Manager from Start → Programs → IBM Installation Manager → IBM Installation Manager

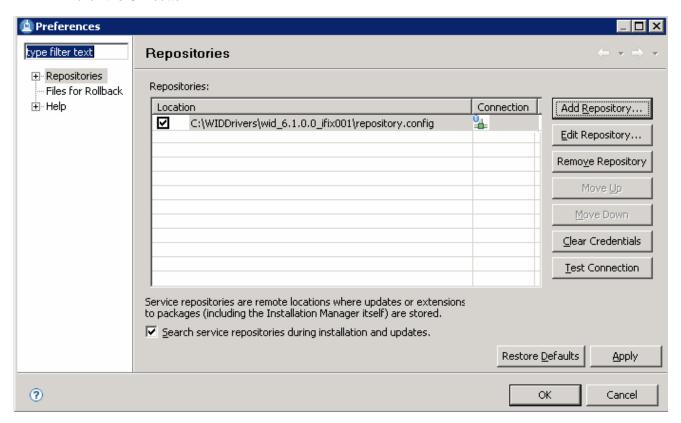

____ 3. From the main menu of the Installation Manager, select **File → Preferences**. The **Preferences** panel is launched

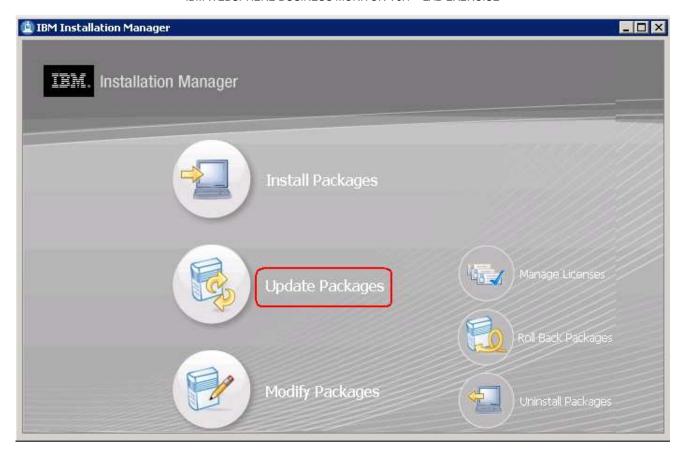

__ 4. Click the **Add Repository** button. The **Add Repository** dialog opens

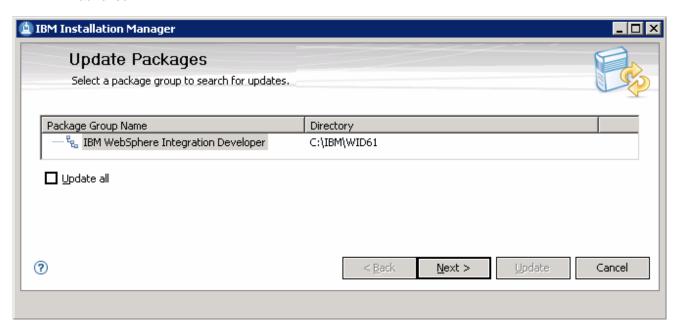

____ 5. Click the **Browse** button for the 'Repository:' field and select the '**repository.config**' file and the click the **OK** button

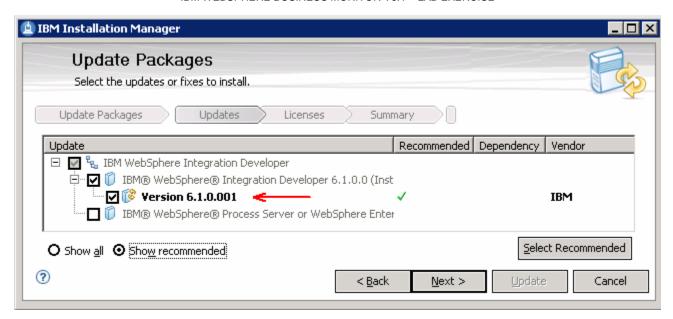

_____ 6. Click **OK** on the **Preferences** panel

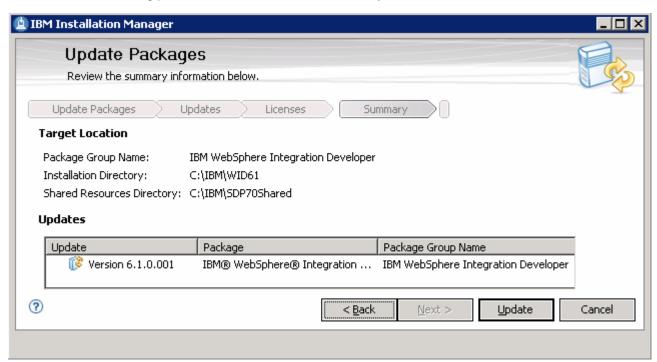

_____ 7. Now click the '**Update Packages**' link. The 'Update Packages' panel of the Installation Manager is launched

- _____ 8. Select 'IBM WebSphere Integration Developer' as the package group and click Next
- _____ 9. In the following panel, ensure the iFix of version 6.1.0.001 is selected

- ____ 10. Click Next
- 11. In the following panel, read the license agreements. If you agree to the terms, select the radio button next to "I accept the terms in the license agreements" and Click Next
- ____ 12. In the following panel, review the installation summary information

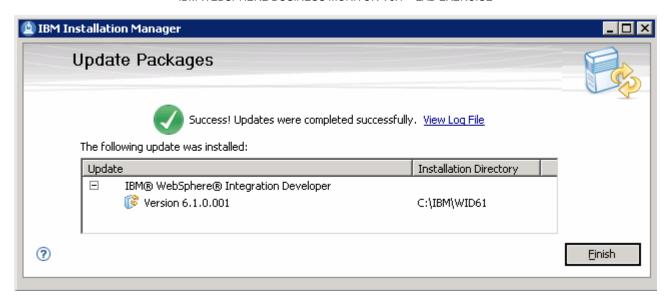

__ 13. Click the **Update** button. The WebSphere Integration Developer update progresses

Updating. Fetching plug-in com.ibm.wbit.tel.ui. (15% of 1 MB)

Pause Download

Cancel

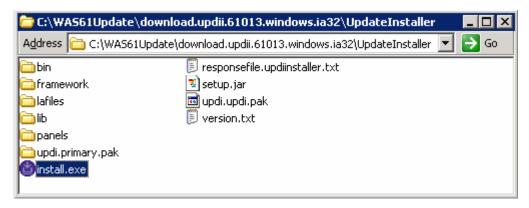

- ____ 14. Click **Finish** once the installation is complete
- ____ 15. Close the Installation Manager

Appendix 1: Installing the Update Installer for WebSphere Software

The Update Installer for WebSphere Software has a new installation program for Version 6.1, Installation Wizard for the Update Installer. The Update Installer now uses the Common Install Engine for WebSphere Software.

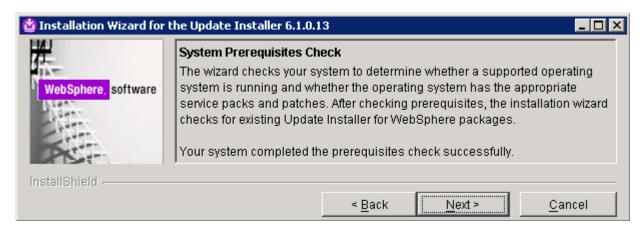

- ____ 1. Obtain the WebSphere Update Installer file; **download.updii.61013.windows.ia32.zip** and extract it to a temporary directory
- _____ 2. To install the Update Installer, navigate to the directory **UpdateInstaller** directory and double click on **install.exe** to run the installer

3. Read the instructions on the Welcome screen

- ____ 4. Click **Next**
- ____ 5. In the following panel, read the license agreement and select the radio button next to I accept both the IBM and non-IBM terms and click Next
- _____ 6. The installation wizard runs the system prerequisite check

- ____ 7. Click Next
- 8. Click the Browse button to set the installation path to C:\IBM\WebSphere\UpdataInstaller

- ____ 9. Click Next
- _____ 10. In the following panel, review the installation summary

- 11. Click **Next** to continue with the installation
- 12. Once the installation is complete, ensure the check box next to Launch IBM Update Installer for WebSphere Software on exit

13. Click **Finish**. The IBM Update Installer is launched

Appendix 2: Uninstalling the Monitor Development Toolkit V6.1

Uninstalling the WebSphere Business Monitor Development Toolkit V6.1 is made possible using the IBM Installation Manager V1.1. The Installation Manager gives you the flexible options depending on what can be uninstalled. The following are the scenarios:

Scenario 1: Uninstall the WebSphere Business Monitor Development Toolkit V6.1

Choosing the IBM Installation Manager's **Uninstall Packages** option, the WebSphere Business Monitor Development Toolkit V6.1 can be uninstalled, which removes both the Monitor Development Environment and the Monitoring Test Environment (if existing).

Scenario 2: Removing the Monitoring Test Environment only

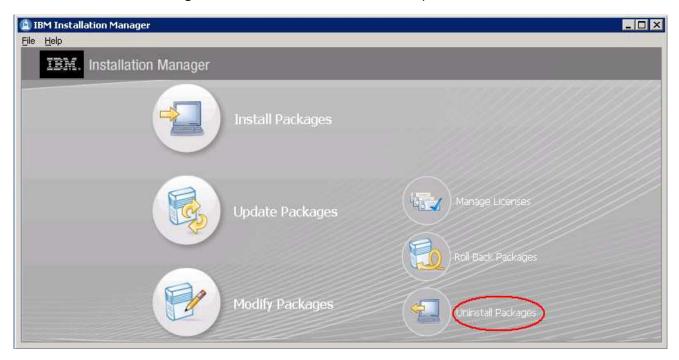

Choosing the IBM Installation Manager's **Modify Packages** option, the Monitoring Test Environment profile can be removed.

To uninstall the WebSphere Business Monitor Development Toolkit V6.1 and its components depending on the situation, follow the instructions below:

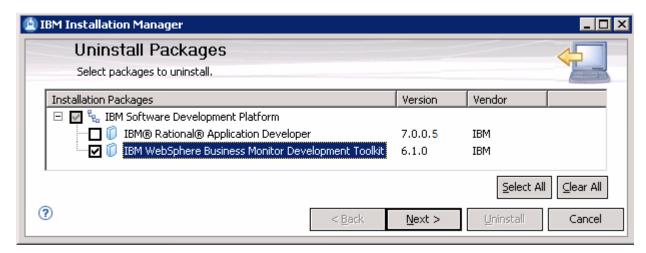

Scenario 1: Uninstall the WebSphere Business Monitor Development Toolkit V6.1

Prerequisite: Stop the Monitoring Test Environment server before proceeding further.

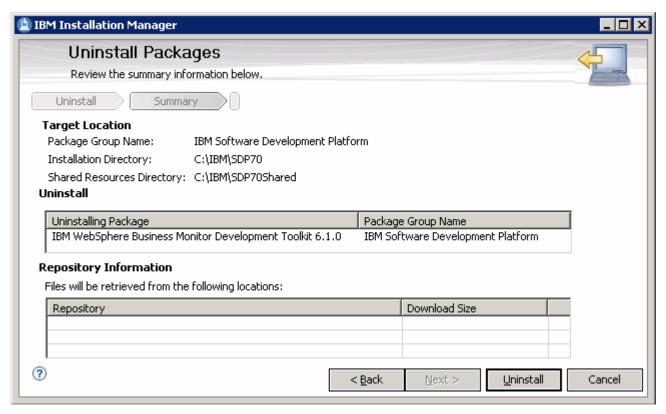

____ 1. Launch the IBM Installation Manager from Start → Programs → IBM Installation Manager → IBM Installation Manager. This launches the Common Launchpad

- _____ 2. Click on the Uninstall Packages link. This the launches the IBM Installation Manager
- _____ 3. In the following panel, select the check box next to "IBM WebSphere Business Monitor Development Toolkit"

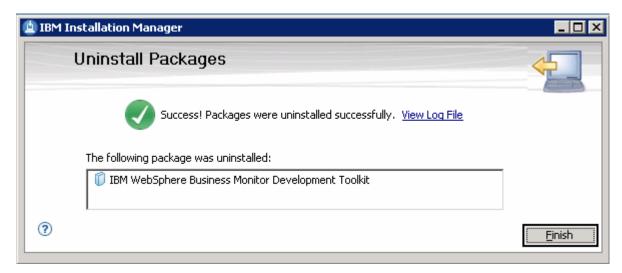

- Click Next
- ____ 5. In the following panel, review the uninstall summary

____ 6. Click the Uninstall button. The WebSphere Business Monitor Development Toolkit V6.1 uninstall progresses as shown below:

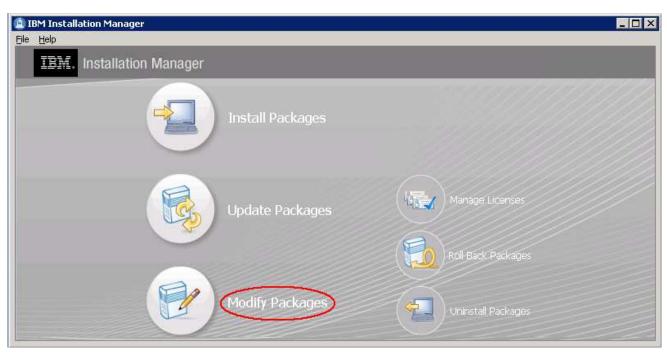

Uninstalling. [monSrvUninstall.bat]

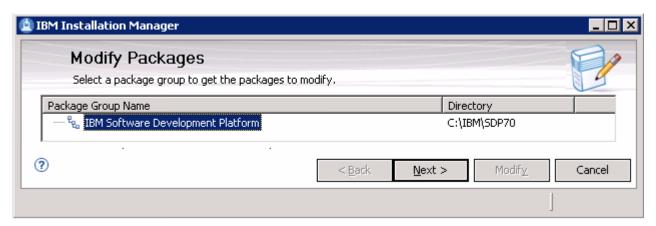

_____ 7. Click **Finish** to close the Installation Manager

Scenario 2: Removing the Monitoring Test Environment only

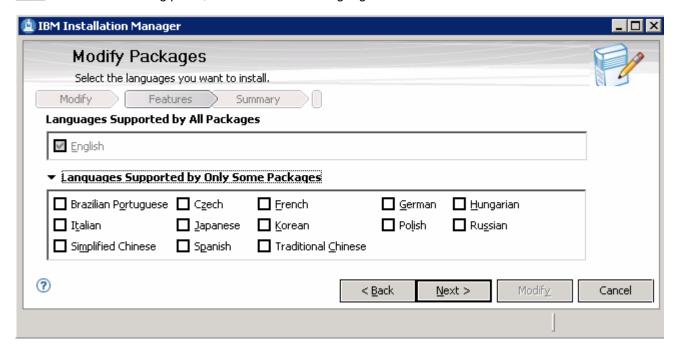

1. Launch the IBM Installation Manager from Start → Programs → IBM Installation Manager → IBM Installation Manager. This launches the Common Launchpad

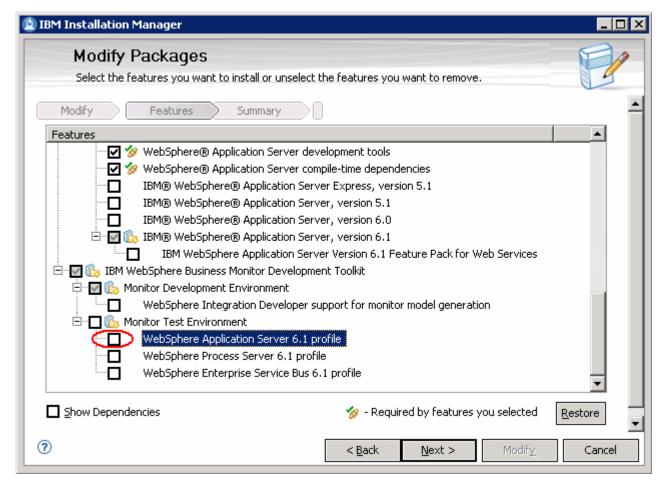

- 2. Click on the Modify Packages link. This the launches the IBM Installation Manager
- ____ 3. In the following panel, select the **IBM Software Development Platform** as the **Package Group**Name

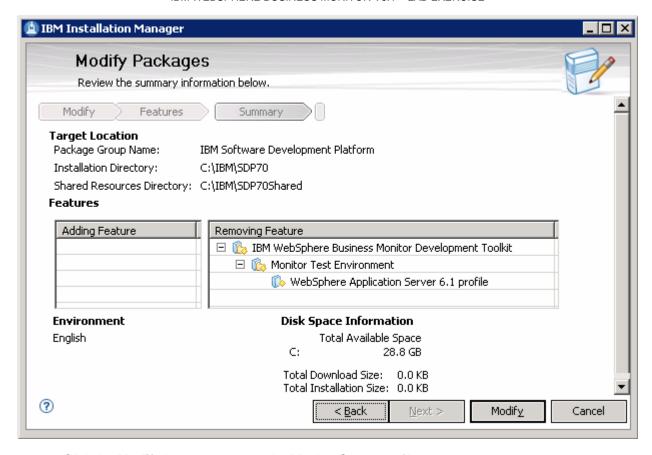

- ____ 4. Click Next
- ____ 5. In the following panel, select the desired language

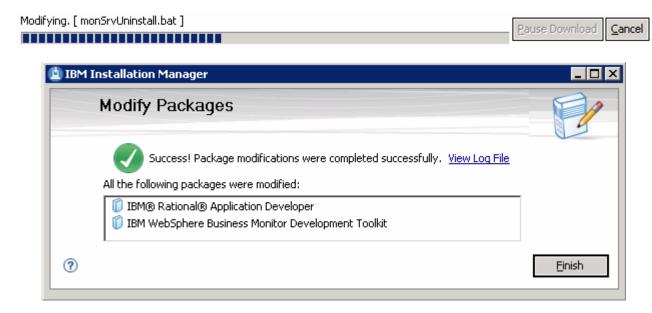

- Click Next
- _____7. In the following panel, clear the check box for the WebSphere Application Server 6.1 profile feature located under IBM WebSphere Business Monitor Development Toolkit → Monitor Test Environment

- ____ 8. Click Next
- _____ 9. Review the "Modify Packages" summary in the following panel

__ 10. Click the **Modify** button to remove the Monitor Server profile

_ 11. Click Finish to close the Installation Manager

Appendix 3: Troubleshooting

- 1. Useful files for debugging initial installation problems
 - a. Location: <WAS_HOME>\logs\wbm\install or <WPS_HOME>\logs\wbm\install
 - i. log.txt
 - ii. wbm_<TIMESTAMP>_install_out.log
 - iii. wbm_<TIMESTAMP>_install_trace.log
 - iv. wbm_<TIMESTAMP>_<PROFILE NAME>_augment_out.log
 - v. wbm_<TIMESTAMP>_<PROFILE NAME>_augment_trace.log
 - b. Location: <WAS_HOME>\logs\wbm or <WPS_HOME>\logs\wbm
 - i. Installconfig.log
- 2. Useful files for debugging Monitor Server installation problems
 - a. <WBM_PROFILE_HOME>\logs
 - i. MonitorServerResourceInstall.log
 - ii. configWBMSIB.log
 - iii. enableIdentityAssertion.log
 - iv. InstallActionManager.log
 - v. InstallDashboard.log
 - vi. InstallRestServices.log
 - vii. installVmmService.log
 - viii. installCbebrowser.log
 - ix. installWBMISCPortlet.log
 - x. configRESTSecurity.log
 - xi. installHumanTask.log
 - xii. InstallABXDashboard.log
 - xiii. wsadmin.traceout
- 3. Useful files for debugging Monitor Server runtime problems
 - a. <WBM_PROFILE_HOME>\logs\server1
 - i. SystemOut.log
 - ii. SystemErr.log

This page is left intentionally blank.
