

# **Overcoming Contradictions** Through Improved Governance, Risk Management and Compliance

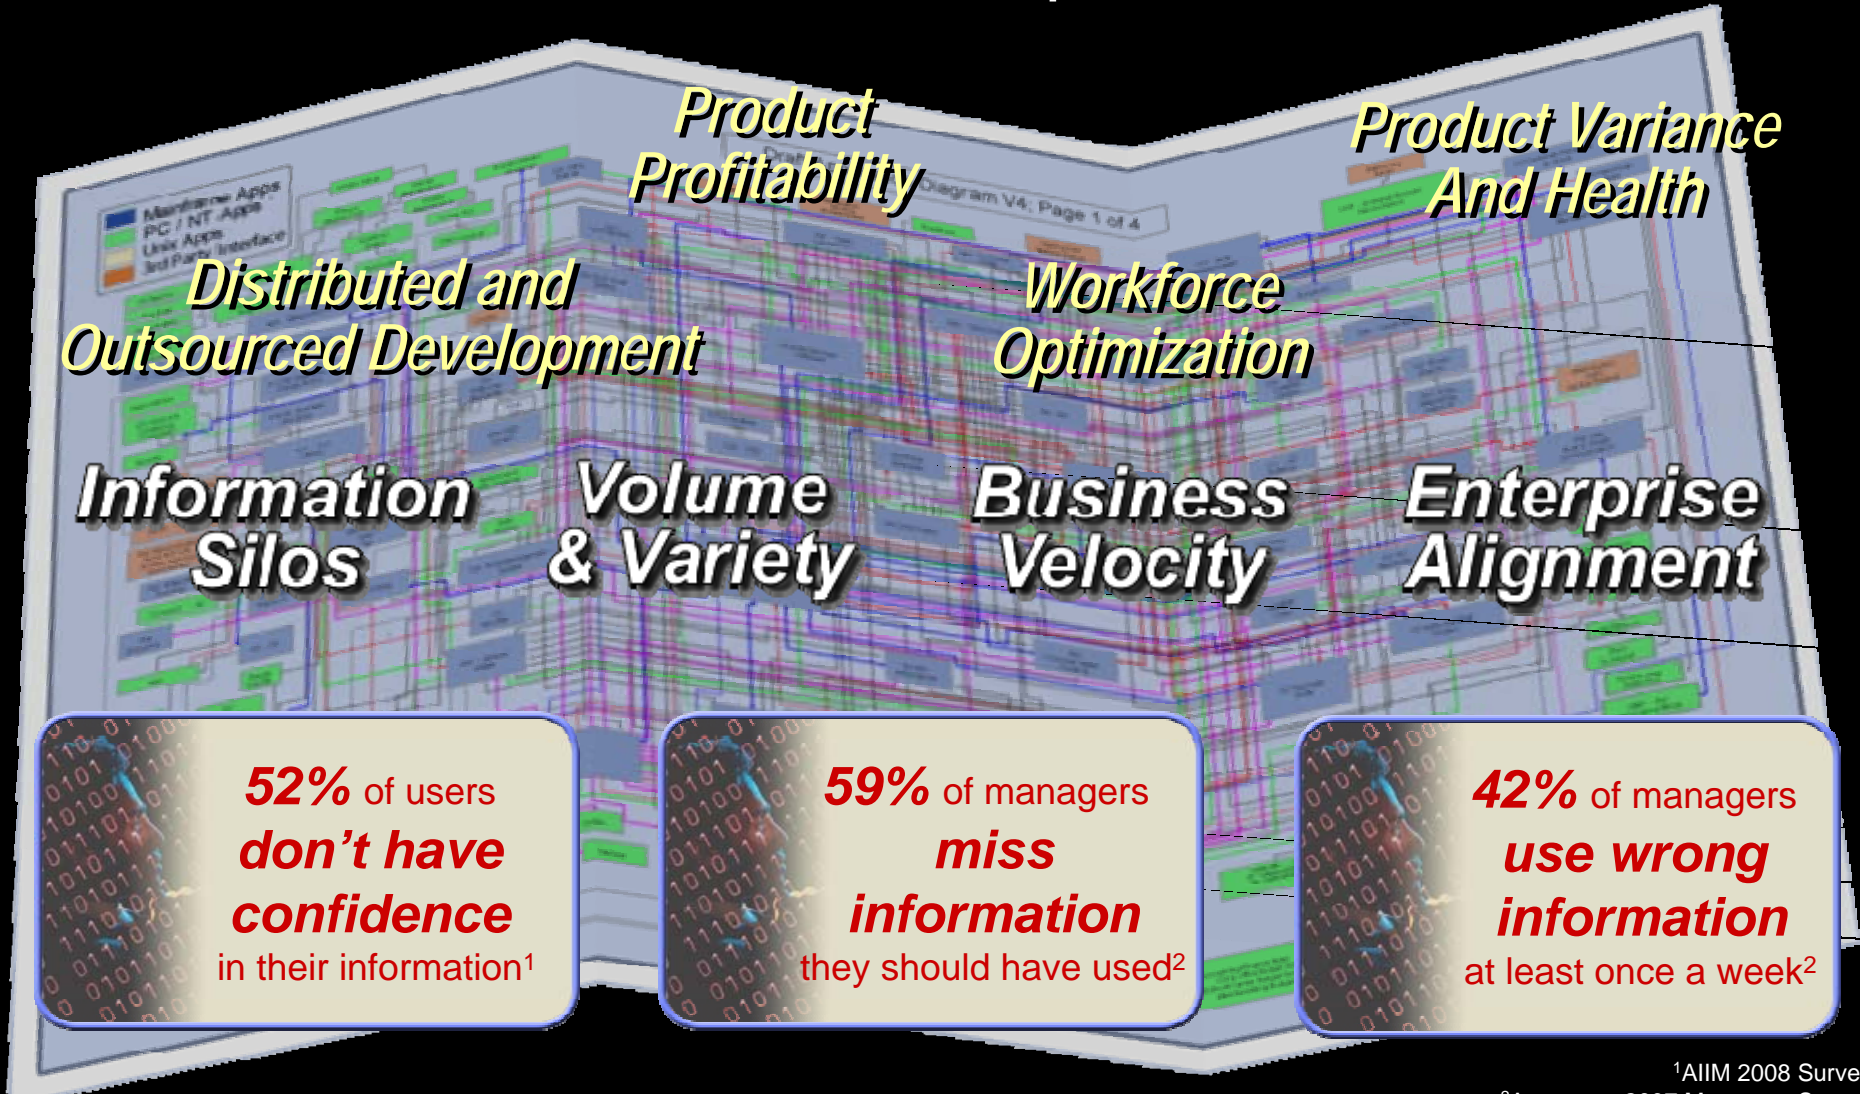

**Michael O'Rourke**

Vice President of Development, Rational Software  
mikeorou@us.ibm.com

**Rational.** software

*Executive Track – EXEC 12*

# Contradictions result from the quest for information

**52%** of users **don't have confidence** in their information<sup>1</sup>

**59%** of managers **miss information** they should have used<sup>2</sup>

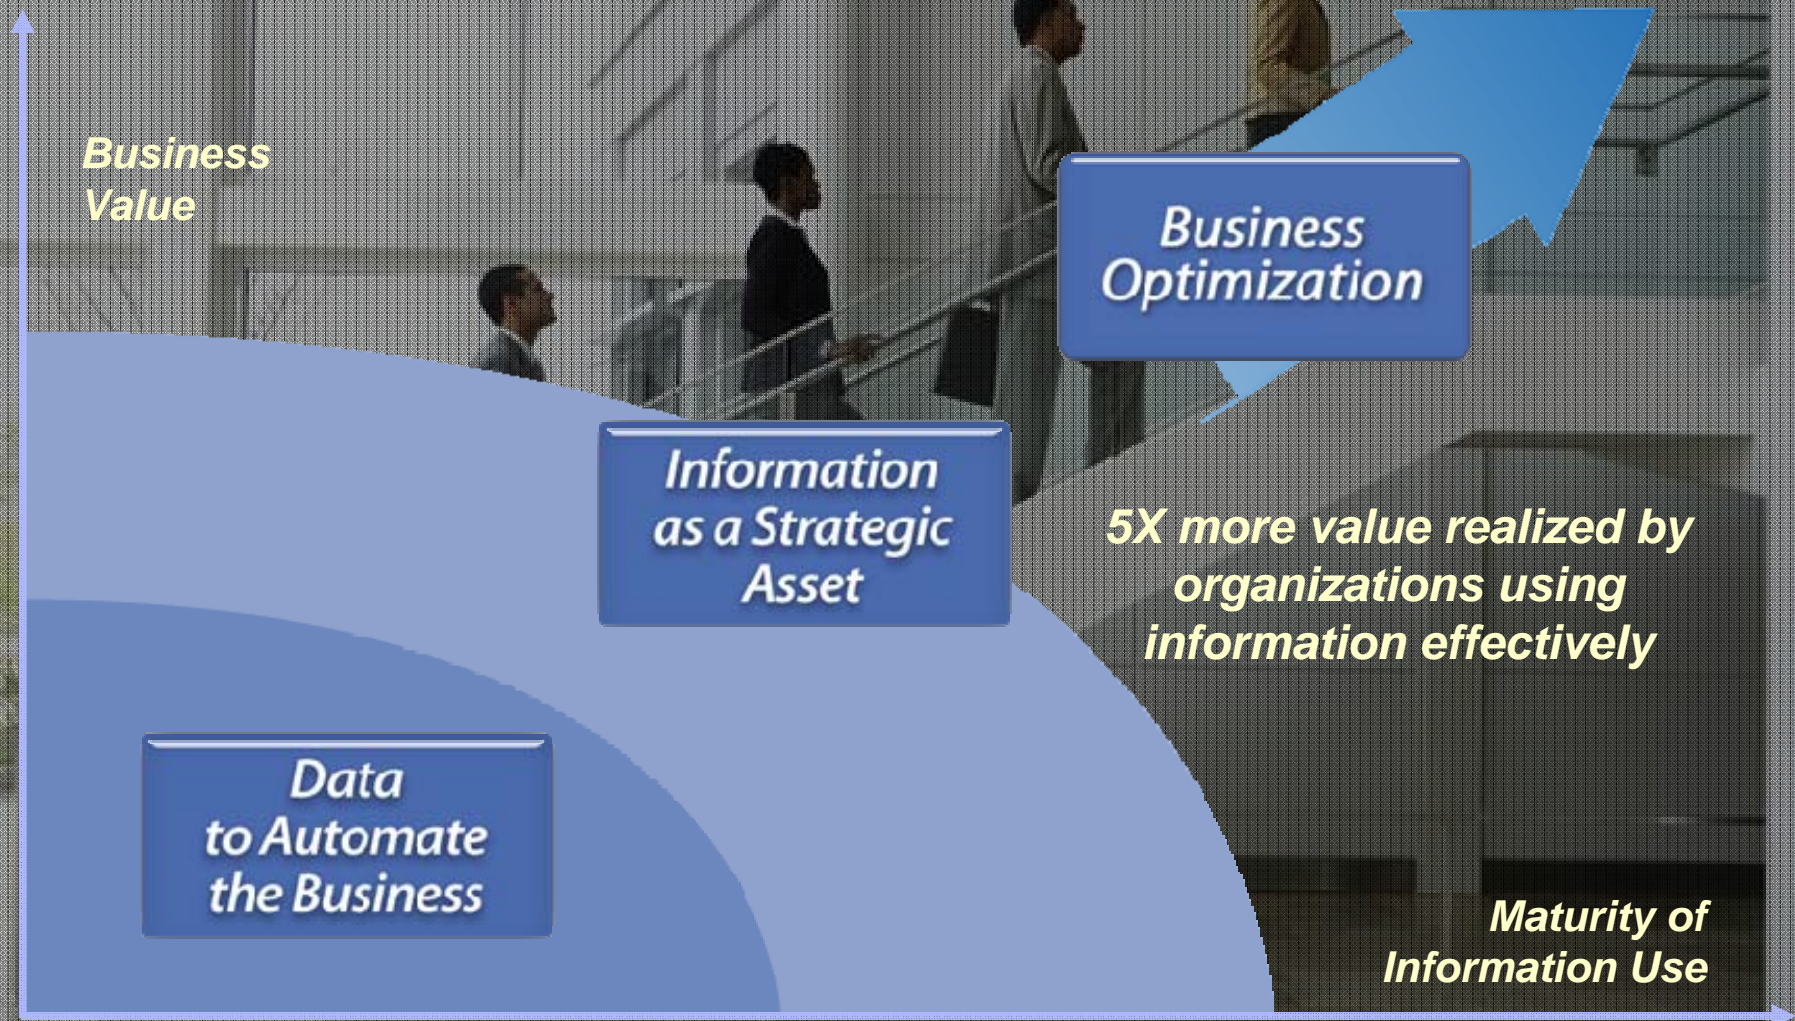

**42%** of managers **use wrong information** at least once a week<sup>2</sup>

<sup>1</sup>AIIM 2008 Survey

<sup>2</sup>Accenture 2007 Managers Survey

# Move from a cost center to a business value driver

# Effective Information comes from proper metrics communicated back to the business

# Software Measurement Status - Today

<b>Fortune 500 companies with productivity measures:</b>	<b>30%</b>
<b>Fortune 500 companies with quality measures:</b>	<b>45%</b>
<b>Fortune 500 companies with complete measures:</b>	<b>15%</b>
<b>Fortune 500 companies with missing measures:</b>	<b>85%</b>
<b>Number of software measurement personnel:</b>	<b>5,500</b>
<b>Number of software projects measured:</b>	<b>160,000</b>
<b>Number of software projects <u>not</u> measured:</b>	<b>50,000,000</b>

- Capers Jones

# Is this REALLY the problem?

## Companies that measure:

**On-time projects: 75%**

**Late projects: 20%**

**Cancelled projects: 5%**

**Defect removal: > 95%**

**Cost estimates: Accurate**

**User satisfaction: High**

**Software status: High**

**Staff morale: High**

## Companies that don't:

**On-time projects: 45%**

**Late projects: 40%**

**Cancelled projects: 15%**

**Defect removal: Unknown**

**Cost estimates: Optimistic**

**User satisfaction: Low**

**Software status: Low**

**Staff morale: Low**

- Software Productivity Research (2007)

# Maybe we should blame the Project Managers?

**Less than 25% of project managers have formal training**

**Less than 20% of project managers have access to cost / project estimating tools.**

**Less than 10% of project managers have access to validated historical data**

**- Software Productivity Research (2008)**

## How about “lesser known” Metrics?

- WSR (Work-to-Sleep Ratio)**
- DODO (Days On per Day Off)**
- HBT (Handbasket Temperature)**
- GALB (Going-Away-Lunch Budget) or GAAB (Going Away-Alcohol-Budget)**
- Dilbert Barometer**
- The Laugh Meter**

- Martin L. Shoemaker

## Beware: Metrics Must Be Used Properly

***Cost per Defect (Penalizes quality)***

***Lines of Code (Ambiguous)***

***Cost per Line of Code (Penalizes new languages)***

***Lines of Code per Month (Ignores non-code work)***

***Staff Work Hours per month (Ignores non-work tasks)***

***Industry averages (Vague and ambiguous)***

*- Capers Jones*

***Measurements must be SMART (Simple, Measurable, Actionable, Realistic, and Timely)***

# How do we succeed using measurement?

Fill in the blank. “The measurement \_\_\_\_\_.”

...is **meaningful** and potentially **benefits** the customer, manager and performer.

...supports a **direct link** between assessments and quantitative data.

...explains **why projects vary** and by how much.

...is supported by **automation**.

...**supports multiple kinds** of software, metrics, activities and deliverables.

...demonstrates **quantifiable correlation** between process perturbations and business performance (e.g. it is as accurate as financial data)

...is a **natural by-product** of the process (no night job).

**“Organizations exercising world-class performance management practices enjoy a 2.4 times market returns of typical companies”**

BusinessWeek Study:  
*The Payoff of Pervasive Performance Management*

# But measurement is difficult amongst the chaos

Executive

Management

Development

Achieve Profit    Market Share    Business Alignment    Quality

**Success can only come from a tight linkage from the development and delivery process to the business.**

Expense    Efficiency    Consumability

Productivity    Deployment    Cost

Like an annual report synthesizes the state of the overall business....a development report needs to do the same....

Build Health    Code Growth

Defect Density    Tests for Requirements    Defect Priority

Communicate the relative facts to give all stakeholders insight as to the health of this critical part of their business.

test script    UNIT TEST    chat waterfall

bill of materials    STREAM    custom dashboards    design model    WORKSPACE    Eclipse plug-ins

test script    SNAPSHOT    development assets    Demo image

# This fidelity mandates a control framework

## 4 Fundamentals for implementing a control framework

- 1. System definition:** A discriminating C/ALM system for linking, tracing and accessing information across your SDLC.
- 2. Best practices:** Best practices for monitoring, measuring and reporting throughout the enterprise
- 3. Interpretation:** A capability to interpret your measures correctly and accurately the health of your development practices
- 4. Operations:** Guidance to define the right actions, workflows and policies to improve your measured results and be compliant

# A Discriminating System

*Lets You Measure, Assess and Improve Information Blindspots*

**Improving**

**Where You  
Should Be!**

**Assessing**

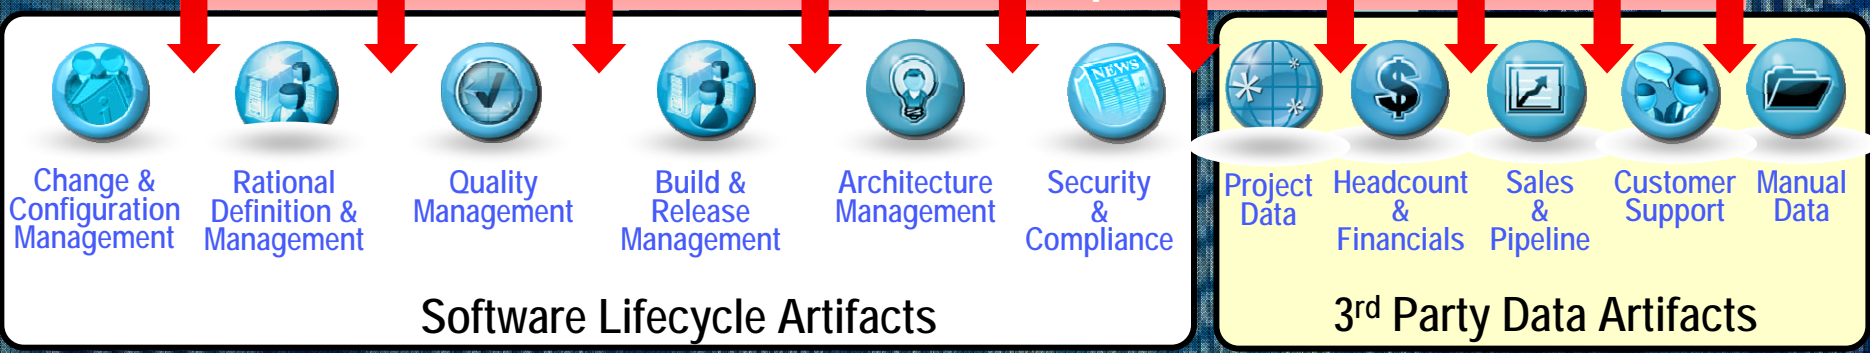

**Where You Are**

- Productivity Rates
- Quality Levels

**Why You Are**

- Process Assess
- Product Health

Quantitative and Qualitative Data  
Information Gaps

# Defining a best practice...

*“The likelihood of delivering a **product on time, within budget, with acceptable revenue or benefits and an acceptable level of support costs.**”*

- The definition points us to what we need to project
  - ▶ Time to complete
  - ▶ Cost to complete
  - ▶ Expected revenue/benefits
  - ▶ Expected support and ownership costs
- The other indicators (expected effort, probability of on-time completion and percent complete) can be driven from these

# And more specifically...

## The indicators that impact **time to complete** –

- ▶ Critical situations
- ▶ Defect density/severity analysis
- ▶ Defect repair latency
- ▶ Build health
- ▶ Velocity
- ▶ IPD timeliness
- ▶ Iteration status
- ▶ Variance in time-to-complete estimates by task

## The indicators that impact **expected revenue / benefits** –

- ▶ Benefits of requirements
- ▶ Benefits of demonstrable capabilities by iteration (iteration status)
- ▶ Benefits of RFE 30/90-day SLA

## The indicators that impact **cost to complete** –

- ▶ Staffing actuals vs. plan (is also an indicator of project size)
- ▶ Capital expense actuals vs. plan
- ▶ Earned value

## The indicators that impact **expected support and ownership costs** –

- ▶ APAR backlog
- ▶ RFE 30/90-day SLA
- ▶ Build health
- ▶ Time-to-resolution for internally-found defects and APARs

# Best Practice Interpretation: Project Health

<u>Metric</u>	<u>Weight</u>	<u>Source</u>	<u>Measure</u>
Defect Backlog	10	Change Mgmt	3 Months
Enhancement SLA	10	RFE Website	60 Days
Cost of Support	10	<b>Analysis</b>	25% Total
Critical Situations	05	Support DB	<1 Month
Defect Density	10	<b>Analysis</b>	By component
Defect Repair Latency	05	Support DB	By product maturity
Build Health	10	<b>Analysis</b>	90% Clean
Project Velocity	10	SCM Tool	Better than Average
Staffing Actuals	10	Financials	10% Variance
