

# **IBM Tivoli Foundations Application Manager**

# Highlights

- Monitor, alert, and report on the performance and availability of servers, networks, databases, and Email applications
- Achieve quick time to value with minimal install, configuration and integrated discovery
- Leverage the IBM Lotus
  Foundations Server, which provides the essential software for
  business reliability, security and
  simplicity
- Integrate with other IBM Tivoli Foundations offerings and solutions to provide end-to-end management of the IT environment

Small and medium-sized organizations are focused on running the business and do not have abundant resources to manage IT. The IT resources needed to manage operating systems, email and database servers, and hardware devices, can quickly become prohibitive. In person monitoring is costly, time consuming and prone to errors—additional staff time is often needed to troubleshoot problems.

Many growing mid-sized organizations leverage multiple solutions to monitor individual systems. Tracking capacity and performance across these systems is not at all cohesive. Many organizations lack central visibility to effectively

monitor the health and availability of IT systems, jeopardizing the delivery of quality of services to their customers. In addition, when new machines need to be introduced or replaced, configuration and integration is tasking and costly.

IBM Tivoli® Foundations Application
Manager provides entry level monitoring
for the growing medium-sized organization looking for the right functionality in
an easy to use and cost effective
solution. It provides key capabilities to
implement application management in
the IT environment including IT asset
discovery, network monitoring, server
monitoring, and monitoring for key
IT elements such as databases, mail
servers, and virtual servers.

This easy to use and install monitoring solution delivers both real-time and historical views that allows clients to visualize and intelligently report on how their IT environment is currently operating and has been operating over time. Thus, enabling customers to see service performance and health across network devices, servers, middleware and application components and improve service quality. With IBM Tivoli Foundations Application Manager, IT organizations can reduce operational cost, increase productivity, maintain desired performance and availability goals and increase customer satisfaction.

# Integration provides you with comprehensive monitoring

Unlike other solutions in the market that provide "lite" versions of their enterprise solutions, IBM Tivoli Foundations
Application Manager is built with
IBM Tivoli Monitoring (ITM) technology.
This is the same powerful solution used

to manage: Server OS, Virtual Servers, Networks, Databases, and Email applications in an enterprise environment. A customizable user interface can bring together the right set of data and reports (called workspaces) in an easy-to-use interface. Additionally, the Application Manager is integrated with discovery capabilities for quick inventory and deployment of monitoring agents. It can also integrate with IBM Tivoli Foundations Service Manager for complete end-to-end management of incidents and problems.

# Alerts and reports allows you to react quicker to risks and plan for the future

The built in alerting situations and expert advice feature can help both novices and experts quickly identify, isolate, and resolve problems. Data warehousing for historical trending and reporting for any metric collected can be leveraged for capacity planning. It can help you anticipate resource overutilization and plan for future hardware investments

# Designed with your interests in mind

IBM Tivoli Foundations Application
Manager has been designed to help
growing mid-sized organizations with
limited funds and resources, achieve
quick time to value with minimal install
and configuration time.

It runs on the IBM Lotus® Foundations Server, which provides the essential software required in running your business with reliability, security, and simplicity; an ideal server for businesses with limited budgets and IT resources.

Intuitive deployment tools can help IT administrators quickly deploy and get running for fast time-to-value. Its launch pad navigation screen allows both novice and expert users, to quickly access essential operational, administrative screens and reports. It also allows users to customize the views based on the role specific functions within the software appliance.

Predefined views/windows called workspaces, deliver immediate value in displaying performance and availability data, as well as facilitate communication between individuals by providing a common view, with the flexibility to quickly create additional workspaces tailored to the needs of each individual or group.

With built in reliability and ease of use, IBM Tivoli Foundations Application Manager provides unique self-managing autonomics to help reduces IT complexity, by automating many critical functions including installation, configuration, security checks, and overall system management.

#### **List of Recommended Certified Hardware:**

 IBM Lotus Foundations™ Appliance, model number 9234-CNx and model number 9234-DNx

## Optional IBM systems not certified:

- IBM x3200 M2 Simple Swap SATA model number 4367-E1U (requires Intel® Pro 1000 PT Server Adapter (part number 39Y612))
- IBM x3200 M2 Hot Swap SATA model number 4367-E1U (requires Intel Pro 1000 PT Server Adapter (part number 39Y612))
- IBM x3200 M2 Hot Swap SAS model number: 4367-42U (requires Intel Pro 1000 PT Server Adapter (part number 39Y612))
- IBM x206 model number 8482-3MU
- IBM x226 model number 8646-0AU
- IBM x236 model number 8841-01U
- IBM x346 model number 8840-01U
- IBM 3105 model number 4347-64x or model number 4347-22x
- IBM 3200 (SATA Simple Swap and Hot Swap models) model number 4363-2DU or model number 4362-12U
- IBM 3250 model number 4365-6BU
- IBM 3400 model number 7975-5AU

## Minimum third-party hardware server requirements:

- x86-based system
- · At least one IDE or SCSI hard disk
- At least one Network Interface Card (NIC)
- IDE or SCSI CD-ROM drive
- VGA-based video card
- At a minimum 4GB RAM, 500 GB HD space and two single core CPUs or one dual core CPU.

Required external peripherals: monitor, keyboard, mouse

#### Operating systems:

• IBM Lotus Foundations Start
