Forensic Data Miner, Knowledge and Expertise Centre
for Intelligent Data Analysis, *Netherlands Forensic Institute*

Adding Intelligence for a Safer City

Introduction

Ankie van der Zanden

- Master in Mathematics & Informatics
- Internship at Police The Hague
- Data miner at Police Amsterdam
 - Analysis
 - Implement data mining
- Data miner at Netherlands Forensic Institute

NFI

Netherlands Forensic Institute

Part of Ministry of Security and Justice

Provides high-quality forensic services

Kecida

Knowledge and Expertise Centre for Intelligent Data Analysis

– Provides intelligent data analysis for public safety sector:

- ❖ Tax authorities
- ❖ Intelligence agencies
- ❖ Justice
- ❖ Police & Border police
- ❖ Immigration services
- ❖ Defence

How We Make Cities Safer

By adding intelligence in existing processes:

- Prevent high volume crime
- Support police investigation
- Detect human trafficking
- Risk assessment for illegal immigrants
- Trace child abuse
- Detect fraud
- et cetera

Add Intelligence in Processes

Predict and Prevent Crime

Structured Data

Text Mining

I was on Powell Street at the entrance of the Sunshine hotel, when I spotted a man in the hotel lobby that was acting very suspicious. When a bus, license plate RQC9037, arrived he boarded the bus and left in the direction of Newcastle. The driver was recognized by my colleague as John Doe, the same man who stabbed the woman in the Burger King last week.

Structured Data

Structured Data

Summarize

- We can prevent high volume crime by prediction and schedule resources
- We can help solving crime by giving useful insight in large data collections
- Intelligent data analysis can add value when used in existing processes
- More text mining needed because text...
 - ... is more available
 - ... is growing fast
 - ... often contains more information
 - ... is independent of database restrictions
