

MQSeries family of products

*MQSeries Business Partner  
directory*

It's how different systems do business

Welcome to the latest edition of the MQSeries\* Business Partner Directory. This publication offers a listing of MQSeries Business Partners of all types, including the categories of products and services that they can provide.

As I'm sure you are aware, the industry that surrounds MQSeries is constantly changing, with exciting new developments and announcements coming along all the time. Therefore the very latest up-to-date information can be found in the on-line partner directory on the MQSeries Business Partners page at: [www.ibm.com/software/ts/mqseries/partners](http://www.ibm.com/software/ts/mqseries/partners)

This site also provides direct links to the Business Partner home pages. Inclusion in the MQSeries Business Partner Directory, or on our WWW site does not represent endorsement of the partner or their solutions. Each organisation must assess the suitability of the Business Partners and their products and services according to their needs.

Non-inclusion in this directory or on the WWW site does not mean that we have excluded a particular partner or their solution, but that in such a dynamic environment we might not have captured all of the current providers of solutions and services in this area.

We hope that you find this guide useful and we would welcome your feedback.

Please send comments to:

Alan Everard  
MQSeries Business Manager,  
Mail Point 206  
Hursley Park  
Winchester  
Hampshire

URL: <http://www.activesw.com>

Available: North America, Europe

Summary: ActiveWorks Integration System is a suite of software products that allows customers to integrate packaged, custom, Internet, database and legacy applications. It includes an Adapter for IBM MQSeries, providing direct mapping between ActiveWorks events and MQSeries messages. It supports:

- complex message requirements, including master-detail record formats
- automatically generated COBOL record format information included in MQ applications
- multiple communications modes, including one way to MQ applications, one way from MQ applications and request/reply operations to MQ applications
- matches the reply to the requestor
- the administrative information and security fields in the MQ message description (MQMD) headers.

### **Advanced Business Technologies, Inc**

URL: <http://www.Abtedge.com>

Available: North and South America

Summary: ABT's Omnia Suite is a client-server application designed specifically for those manufacturers and distributors that deal with retailers. Footwear, Apparel, Toys, Games and Cosmetics are examples. Omnia utilizes MQSeries to process transactions to Warehousing, Supply Chain and Financial applications in a near realtime environment. The Omnia Suite consists of OM Order Management, PPM Purchasing and Production Management and SE Selling Edge, a sales force access application. In the Footwear and Apparel industry Omnia excels due to the unique grid-based Order Management for complex multi-dimensional products as well as allocation processing against Work in Process/Open Purchase Orders with rules set by the customer.

**Alier Inc. (Active Software)**Contact: [info@alier.com](mailto:info@alier.com)URL: <http://www.alier.com/econnect.html>

Available: Europe, Americas, Asia

Summary: Alier (Active Software) provides financial enterprise application integration products and services. Alier's EnterpriseConnect together with IBM MQSeries messaging technology, enable mission-critical integration of disparate Front, Back, and Middle Office systems.

EnterpriseConnect, built upon Java and XML open standards, provides a complete solution to the challenge of Financial Integration. It manages the integration complexities and lets you focus on the processes that drive your business. Our unique 4th generation approach enables reusable Financial Integration processes that contribute to faster implementations – more than 10X faster than other methods – so your investment goes to work quickly.

**American Software**URL: <http://www.amsoftware.com/flow>

Available: Global – see web site for locations

Summary: American Software's Flow Manufacturing solution supports innovative, demand-driven 'pull' manufacturing techniques for mixed-model production of discrete products. The system manages faster and more flexible manufacturing environments, supports line design and product synchronization, performs daily mixed model production planning (demand smoothing), calculates Kanban requirements and includes integrated method sheets to optimize flow manufacturing operations. Teamed with the extensive platform support provided by IBM's message-oriented middleware, MQSeries, Flow Manufacturing provides plug-and-play interoperability with popular enterprise resource planning (ERP) solutions even in a disparate platform environment. Benefits include reduced cycle times by more than 70 per cent and inventories slashed by 50 to 90 per cent.

Summary: Our experience is broad, extensive and quality driven. All of our projects include a professional deliverable that details the architectural design, naming conventions, installation, configuration, and message flow of the completed project. The following bullets illustrate the scope of our MQSeries capabilities.

- Projects have included Banking and Financial Trading
- Experience with version 2.2, 5.0 and 5.1.
- Platforms include NT, UNIX, AIX, and MVS.
- Protocols implemented include TCP/IP and SNA.
- Skilled with both client and server configurations.
- Extensive application development experience, including the use of threads.
- Extensive system administration experience, including performance tuning, error recovery and configuring triggers.
- MQSeries certified.

Available: Available through distributors worldwide

Summary: Bluestone Software delivers software products that provide the infrastructure for e-commerce applications. Both the Sapphire/Web and XML-Server product families integrate with MQSeries to deliver a complete transactional framework for application to application communication across the enterprise. Bluestone's MQSeries integration module allows applications to send and receive any number of messages from any number of message queues. It can be used for both client to server or server to server transactions. Bluestone's integration of MQSeries technologies with other enterprise resources like SAP, PeopleSoft, CICS or any relational database provides customers with controlled access to all corporate data resources.

Summary: Brain<sup>2</sup> is a company specialized in MQSeries consultancy and Services.

They do large scale MQSeries projects in Europe. Besides in MQSeries as such they are also specialized in projects where they use MQSeries to make efficient, fast and integrated web-sites that are linked with back-end systems and hosts. It is in this context that they have developed their own tool to integrate existing applications without modifications in a web-application via MQSeries. The tool is called MQSMS (MQSeries Monitor and Supervisor). This product allows you to integrate your existing applications with MQSeries without the need to include MQI-calls in these programs. MQSMS is available on AS/400 (OS/400), NT and UNIX.

Financial Sales Suite (FSS) is a Lotus Domino/Lotus Notes-based Customer Relationship Management System for Financial Institutions. By using MQSeries as the middleware between existing financial systems/datawarehouse applications and FSS, bank personnel are presented with a consolidated picture of a customer's status and engagement derived from all of the institution's systems. Tracking of sales opportunities allows any authorized person to view status of product sales to a customer. Call Center personnel use FSS to get a view of the customer when doing business over the phone.

FSS is Internet enabled.

Summary: CommerceQuest produces Enterprise Application Integration (EAI) solutions that exploit IBM MQSeries as a strategic infrastructure technology. Our products include File Transfer Facility for MQSeries (FTF/MQ) and Expert/MQ. FTF/MQ plugs directly into existing business processes and applications to seamlessly bond business critical information across the enterprise. Expert/MQ delivers an MQSeries "Consultant-in-a-Box" by automating or simplifying much of the complexity associated with analyzing, designing, configuring, developing, deploying, and managing MQSeries environments. In addition to our products, CommerceQuest provides extensive EAI consulting and education services that cover all facets of MQSeries.

Summary: MQ/204 is an intuitive extension to Model 204s User Language that lets you take full advantage of MQSeries from within Model 204. By simply learning a few new command parameters, programmers can modify User Language applications to put and retrieve messages to and from MQSeries queues. So Model 204 can exchange information with other applications on the network, regardless of the operating systems or development environments in use.

+1(800) 521-9353;

Fax: +1 (248) 737-7108

International: Tel.: +1 (248) 737-7639;

Fax: +1 (248) 737-7623

Summary: The STROBE MQSeries Feature helps users understand and minimize their CICS and batch applications' use of MQSeries resources. Reports pinpoint, to the user program statement, the individual MQSeries calls that cause excessive wait time or use excessive CPU time. Additional reports identify the user program statements that call resource-consumptive system service modules. UNIFACE is Compuware's enterprise development environment for building, renewing and integrating strategic applications. UNIFACE provides a connector for MQSeries that allows organizations to leverage existing MQSeries-compliant applications in a transparent and productive fashion. UNIFACE's Assembly Workbench utilizes MQSeries' application programming interfaces (APIs) and exposes these interfaces for use by UNIFACE developers. This enables UNIFACE developers to send/receive MQSeries messages from a UNIFACE application without needing to know the specifics of the physical MQSeries installation.

Summary: Constellar unites the real-time messaging capabilities of MQSeries with the high performance data transformation capabilities of Constellar Hub to create a powerful enterprise application integration (EAI) solution for customers who are implementing e-business applications such as e-commerce, Customer Relationship Management, data warehouses and ERP systems. Constellar Hub reads MQSeries messages and dynamically joins them with other data streams from legacy, relational and packaged application data sources. Constellar Hub is enterprise-class software that provides a centralized engine for data movement, data transformation and interface management across all enterprise applications. Constellar Corporation is among a leading providers of EAI solutions for Global 2000 enterprises.

Mobile: 01-918-633-7798

Summary: Coradon Consulting provides solutions in the X.400, X.435 & X.500 LDAP EDI standards field translating both ANSI X.12 and UN-EDIFACT electronic commerce protocols. Along with IBM we participate in the IETF TIP working group, which is attempting to promote a unified two-phase commit protocol to object enable the internet. As a result we have considerable experience with two-phase commit protocols and products both in the EDI arena and the Object Marshalling and Invocation arena. In addition to the TIP group we also participate in the OMG, OpenGroup, FSTC, ANSI, ITU-T NS Security Council and Metadata Coalition.

**CrossWorlds Software**

URL: <http://crossworlds.com/>

Available: Worldwide

Summary: Within large enterprises, there are a variety of distinct integration problems with varying levels of complexity. To fully address the broad range of integration challenges, a complete Enterprise Application Integration (EAI) architecture should be tiered – providing the appropriate level of technology to solve each tactical integration challenge. The solution must have a strong return on investment by providing integration that effectively supports the business users by enhancing the business value of their underlying applications. In June of 1999, CrossWorlds signed a partnership agreement with IBM Software that extends its current MQSeries OEM contract to include the MQSeries Integrator product.

Available: North America, Latin America, South America, Canada, Europe, Australia, New Zealand

Summary: ETI provides software solutions that enable your incompatible business applications to exchange information. ETIEXTRACT automates the writing of programs that retrieve data needed from any source, transform it and load it into any other target. Interfacing with IBM MQSeries eliminates issues associated with moving data via file transfer. Now you can achieve rapid movement of all data without corruption. Unique features, such as restart and message delivery guarantee, are the result of ETIEXTRACT's ability to read and write to MQSeries queue managers. ETI's enterprise solution, combined with MQSeries' message-oriented middleware, offers end-to-end data transformation and movement capabilities.

**Extricity**

URL: <http://www.extricity.com/products.html>

Summary: Extricity Software, a leader in business-to-business integration, fundamentally improves the way businesses work together. Extricity enables companies to increase competitiveness and profitability by automating shared business interactions – such as vendor-managed inventory and collaborative planning – between the suppliers, distributors and customers that make up today's extended enterprise. Extricity's application, Alliance, leverages the Internet to allow multiple companies to work together as efficiently as a single entity. Alliance allows users to create, execute and manage mission-critical business processes among value chain partners. Alliance also integrates seamlessly with any enterprise system and supports real-time sharing of any type of data. Alliance allows applications that have been integrated with MQSeries inside a company to automatically communicate with value chain partners' systems outside the company.

**GemStone Systems, Inc.**URL: [http://www.gemstone.com/news\\_events/mq\\_series.html](http://www.gemstone.com/news_events/mq_series.html)

Summary: The integration of GemStone/J and MQSeries gives GemStone/J applications advanced program-to-program connectivity to a broad range of enterprise systems using MQSeries asynchronous messaging facilities. Java applications deployed on the GemStone/J server can issue calls and queries to MQSeries, allowing those applications to access mainframe and legacy applications over the network. Customers can be assured of unprecedented data access and integrity across their enterprise as they employ the GemStone/J server to create a whole new set of Web and Java-based applications. This integrated solution enables developers to focus on building applications and not on infrastructure.

**Hallamshire Software**URL: <http://www.hallamshire.com/hsbimf.html>

Available: Global

Summary: Hallamshire Software offers HallamshireBeans for MQSeries; a suite of Java packages containing Beans, Classes and Interfaces for use with MQSeries. The suite is designed to enable Java programs (applets, applications and servlets), which will access MQSeries, to be easily developed using GUI IDE tools, such as VisualAge for Java, as well as more traditional non-graphical methods. Version 1.1 added LiteBeans and support for the MQSeries Classes for Java. Although provided for all binding types, LiteBeans are aimed particularly at environments where object code size is a primary concern e.g. applets. Our employees include MQSeries-certified Developers and Specialists.

Summary: Message brokering has taken off as a top added value product for IBM MQSeries, and among the leaders at the launch is HUBLink's OM3 Message Broker. OM3 delivers complex message routing, merging, and transformation to MQSeries' message queues to make every segment of your organization run better. Quickly and easily deployed and managed, OM3 works seamlessly with IBM MQSeries – adding very refined message broker functionality to IBM's robust message queuing software. OM3's sophisticated simplicity makes it one of the premier message brokers for MQSeries users.

URL: <http://www.ibi.com/parlay>

Available: Worldwide

Summary: ParlayJB for IBM MQSeries serves as a special dispatcher for integrating IBM MQSeries messaging services with the Parlay application server as well as IBM WebSphere. The Parlay MQSeries JavaBean attaches to a message queue, where it processes messages and hands them off for appropriate processing. This insulates Java programmers from having to understand the complexities of MQSeries.

**Information Design, Inc.** Contact: Contact Kevin Phillips via

URL: <http://www.idi-middleware.com>

Available: North America, South America, Europe, Asia/Pacific

Summary: Information Design, Inc. (IDI) seeks to be the recognized leader for DECmessageQ-to-MQSeries or MSMQ-to-MQSeries migration services. IDI has actively promoted messaging middleware since 1983 and played a key role in the development of Digital's DECmessageQ product. IDI's certified MQSeries consultants are principal messaging engineers and have developed a cohesive set of products, API Conversion Services, training and consulting services that can migrate DECmessageQ (BEA MessageQ) or Microsoft MSMQ application environments to MQSeries with ease. IDI is also a lead source for MQSeries training and consulting on platforms such as Compaq's (Digital's) OpenVMS (OVMS) and all major UNIX variants.

412-232-3780

Available: USA

Summary: DECISIVE Advantage extends MQSeries Integrator to build, populate, and manage operational data marts for real-time analysis and decision-making. Unlike traditional decision support applications that analyze historical data for trend analysis and market segmentation, operational decision support requires near-real-time data integrated from multiple source systems to support Customer Relationship Management, E-Commerce, and manufacturing applications. Other technologies in the marketplace offer real-time ANALYSIS, but if they cannot acquire real-time DATA, their analysis is occurring real-time on old data! DECISIVE Advantage is tightly integrated with MQSeries Integrator, including complete centralized metadata synchronization and GUI interface.

Available: All IntelliCorp products and services are available in North and South America, Europe, Asia, Australia, and Africa.

Summary: Our LiveInterface product is the only application integration tool which operates completely within the SAP R/3 environment. This provides unparalleled access to the R/3 APIs, functions, database, and dictionary in your inbound and outbound interfaces. Our LiveInterface Adapter for MQSeries add-on product now offers the same ease of use and unequalled power for inbound and outbound MQSeries messaging. With it, even junior programmers can quickly develop robust MQSeries applications with point-and-click simplicity which utilize MQSeries' features such as logical messaging, reply reports, and more. From within R/3, you can control messaging operations and monitor messaging transmissions.

**INTERCOPE**

URL: <http://www.intercope.com>

Available: Worldwide

Summary: INTERCOPE's FaxPlus/Open production fax solution is sold by IBM to major customers worldwide. Many are MQSeries users. Fax integration requirements are met by interfacing to FaxPlus/Open in one of two methods. FaxPlus/Open has a standard MQSeries Integration Module. The approach favoured by some customers, however, is via the FaxPlus/Open File API to provide tightest integration with individual requirements. Not only does FaxPlus/Open send and receive faxes, but is also able to distribute reports via MQSeries on all faxes, whether originating from MQSeries-connected systems or not. FaxPlus/Open has standard integration for all popular systems (Notes, SAP, EDMSuite, etc.) and servers are available on OS/390, AIX, Windows NT and IBM OS/2.

URL: <http://www.isg-inc.com>

Available: ISG's services are available worldwide.

Summary: ISG is a Premier BesTeam member and is a full service consulting organization with extensive MQSeries experience and expertise. For end-user clients, ISG's major focus areas are:

- Integrating client/server and legacy applications
- Developing new applications using MQSeries and other relevant middleware
- Architecture and engineering of enterprise-wide middleware
- Technology assessment and evaluation (long and short term)
- Complex multi-tier application development
- Education and training in middleware and internet

ISG has a long history with MQSeries, including the integration of MQSeries with a leading Object Request Broker. For end users, ISG has provided planning, design, and implementation of business-critical applications and supporting infrastructures using MQSeries for leading airlines, insurance providers, and financial institutions.

Summary: JuxtaComm Technologies suite of products automate the capture, transformation, and delivery of data between MQSeries applications. Information is quickly captured from databases, flat files, MQSeries, or directly from an application using its API, manipulated using a basic-like rules language, and delivered to its targets. JuxtaComm maintains data structures, transformation rules, as well as capture and delivery specifications in a definition database that is accessed through an intuitive graphical user interface. These specifications are combined into a sequence of actions, called a script, which can be executed time and time again, even after the data sources and targets have changed.

Summary: Our Enterprise Application Integration (EAI) product eXconnect™ interoperates in realtime between disparate application systems at a transaction and data access level. Using the message management facilities of MQSeries and XML for transaction mapping and translation, eXconnect operates on all the main system platforms from Windows 95 to MVS. Designed for Mission Critical Applications:

- Uses IBM MQSeries' proven high volume transaction capability
- Designed for many-to-many location interactions using hub and spoke logical design
- Full logging and recovery capability for transactions
- Compression using a modified Lepel-Ziv (LZO)
- Supports all ODBC compliant database management systems

eXconnect license is currently offered under a contract for installation and maintenance services from LogiSys.

Available: Worldwide

Summary: Lotus Development Corp. has several products which integrate MQSeries and Lotus Domino, including:

- MQSeries and CICS Connections for Domino 1.0 consisting of
  - MQEI – a combination of LotusScript classes and Notes databases for rapid application development for both MQSeries and CICS integration
  - MQLSX 1.3.2 – MQSeries API wrapped as LotusScript classes
- MQSeries Trigger Monitor for Notes: This monitors a designated queue and when a message is received, a Domino agent is executed.

We are developing a Connector for MQSeries, which enables developers to integrate MQSeries and Notes applications using visual mapping with no programming. The Connector can be used with Domino, Lotus Enterprise Integrator or also with programming in LotusScript or Java.

Summary: Financial institutions today find themselves having to manage message communication and flow in dynamically changing internal and external environments. The ongoing race to achieve complete EAI, higher STP rates, reduce settlement cycle time and effectively connect the front, middle and back offices can be won with the MINT and MQSeries combination – the MQ/IQ. This comprehensive solution for content sensitive rule based routing, data transformation and information flow control provides the financial institution with a state of the art tool to communicate between distributed and disparate networks and systems. Valuable development time and effort are saved by the MQ/IQ flexible, modular and scalable architecture.

Summary: MQSoftware is a leading developer and supplier of MQSeries software tools, consulting services, and training. It is a premier-level business partner of IBM.

- Its QPasa! product offers complete configuration, performance monitoring, and analysis for MQSeries, MQSeries Integrator, and MQSeries Workflow.
- PFBridge for MQSeries automatically links plant floor systems with ERP and other business applications.
- SQLBridge for MQSeries dramatically reduces application development time.
- Fathom offers file transfer and remote job entry using MQSeries.
- Consulting services and training classes are offered in North America and worldwide.

Summary: MQConnect is a software product that provides Unisys A-Series applications the ability to fully participate in the message driven processing world of IBM MQSeries. The MQSeries products implement a common application program interface (the message queue interface, MQI) on all supported platforms. MQConnect supports the MQI on A-Series and enables connection to other members of the MQSeries family.

URL: <http://www.muscato.com>

Available: Worldwide

Summary: Muscato Corporation offers expertise in solving complex integration and interoperability challenges. With success in many fast-growing industries, Muscato can help you solidify an IBM solution encompassing both the hardware and software aspects. Muscato's ENGIN, an enterprise integration enabler, facilitates the exchange of information between systems in a format and context that each understands without requiring changes to the applications and without API programming. ENGIN, using its MQ connector, makes communication possible between MQSeries-enabled and non-MQSeries-enabled applications. ENGIN works hand-in-hand with MQSeries to achieve end-to-end guaranteed message delivery. Muscato provides a full training program for its ENGIN product suite.

**Nanoteq (Pty) Ltd,  
(member of PQ International)**

URL: <http://www.nanoteq.com/product>

Available: Internationally

Summary: The Nanoteq MAP (Message Authentication Processor) product was designed to deliver application messages securely and reliably between a central computer and number of subsidiary computers, using MQSeries middleware as a transport mechanism. MAPs are responsible for both the security/privacy and authentication of messages in real-time electronic communications, but operate as "black boxes" in that the en-route message processing is transparent to the user. MAP devices are tamper resistant and provide alert messages of attempts to tamper with traffic. The MAP can be attached as a host system co-processor for general data security, application session security, or used as a link level, in-line encryptor.

**NovaDatum Limited**URL: <http://www.novadatum.co.uk/prodmqmon.htm>

Available: Worldwide

Summary: EmCueMon is a tool for monitoring the status of MQSeries objects (Queue Managers, Queues, Channels etc) across different hardware platforms. EmCueMon runs on Windows 95 or NT systems and uses TCP/IP as the communications medium between the EmCueAgent programs running on the various MQSeries platforms, such as Unix, OS/2, NT and MVS. This ensures that the unavailability of MQSeries on a particular system will not prevent EmCueMon from reporting the correct status.

**OnDisplay**

URL: <http://www.ondisplay.com/news/pressreleases/ibm.html>

Available: Worldwide

Summary: By integrating CenterStage with IBM MQSeries, companies will be able to expand their enterprise beyond traditional ERP and legacy systems to include trading partner transactions. OnDisplay's ability to rapidly automate and format data from multiple sources and formats including XML, flat files, EDI and HTML provides businesses with seamless integration between external sources and internal, existing back office systems. Combining the two technologies helps users cost-effectively engage and transact between their legacy systems and outside sources and makes information available for re-use in countless e-business applications. Together OnDisplay and IBM help customers realize the potential of a fully integrated electronic commerce or e-business portal site, improve speed-to-market and anticipate IT changes as their business changes.

**Pegasystems Inc.**

URL: <http://www.pegasystems.com/products/pcomponents/index.html>

Available: Worldwide

Summary: Pegasystems' PegaCONNECT provides a facility to send messages between a Pegasystems solution and IBM MQSeries. Using this facility, you can create and send messages to a target queue on a remote system. Once a message arrives on a target queue, a process can be triggered. This triggered process can then perform any desired processing and place any of the resulting output on the reply queue that exists on the originating system. Pegasystems' standard interface to MQSeries allows users to invoke these messages without writing any code.

URL: <http://www.precise-conn.com>

Available: U.S./CANADA/EUROPE, for other countries call us or send an Email.

Summary: Q/BoosterIntroduction:

- Productivity tool for MQSeries, supports 23 platforms.
- Reduces memory load on MQSeries host by 50%-80% compared to direct attachment to MQSeries. Achieved using our new technology SuperAgent.

Services Provided: Send&Reply, Send&Forget, SubScribe&BroadCastWithReply, SubScribe&BroadCastWithoutReply.

- Send message asynchronously and get a reply (if needed) asynchronously.
- Broadcast message asynchronously and get a reply (if needed) from each server asynchronously.
- Direct access to MQSeries. Allows applications using Q/Booster to interface with existing applications that read/write MQSeries messages.

Subscribing Services:

- Providing subscriber-security (illegal users are rejected).
- Providing message-distributing control: criteria are set, controlling the sending of each particular message to each subscriber.

**Prime Associates, Inc.**

URL: <http://WWW.PRIMEASSOCIATES.COM>

Available: Worldwide

Summary: Prime Associates Inc is a leading provider of enterprise middleware solutions. PEMS (The Prime Enterprise Messaging System) enables EAI and Transaction Transformation. The key capability is to allow financial institutions to intelligently automate workflow, which will allow increased transactions without increasing resources and lowering margin. MQSeries is a critical element in terms of connectivity. Also, Prime is a leading provider of Enterprise OFAC solutions (Office of Foreign Asset Control) which filter at-risk transactions against the SDN enhanced database. Again MQSeries provides a pathway for this integration.

Available: The SAS System Software and MQSeries Interface is available globally. Visit SAS Institute at [www.sas.com](http://www.sas.com) to locate the office nearest you.

Summary: The SAS MQSeries Interface allows SAS Software to process data delivered by MQSeries from disparate applications. The processing can include updating a data warehouse with the data received from MQSeries or analyzing the data with the SAS decision support tools. The results from the decision support processing can be distributed using MQSeries queues. SAS Institute is the industry leader in data warehousing and decision support solutions. A commitment to customer-driven research and development, coupled with strategic alliances with leading technology vendors such as IBM, ensures that SAS Institute's customers reap maximum benefit from their investment in SAS software.

**SofTouch Systems, Inc.**URL: <http://www.softouch.com/mqseries.html>

Available: North America, Puerto Rico, Canada. CrossPlex is available to European users via Reed Software.

Summary: CrossPlex was developed in cooperation with IBM S/390 and MQSeries teams and is an IBM recommended solution for OS/390, MQSeries applications, Flowmark Application Interface Feature (AIF) for MVS, Network Computing and many other services. CrossPlex provides automatic Web enablement in HTML and JAVA formats of 3270-based applications from OLTP systems operating in CICS, IMS, or other VTAM environments, with no changes to the legacy programs. Users can specify CrossPlex to create generic HTML pages, use pre-defined HTML templates, or develop sophisticated Web applications with the powerful scripting language available with CrossPlex. Platform-to-platform communication using TCP/IP, APPC, MQSeries, SNA, and virtually any other connection method means that CrossPlex delivers data from 3270 applications independent of the front end device.

Available: North America, Asia &amp; Australasia

Summary: TXDeveloper delivers numerous benefits for developers working with MQSeries, reducing the time for design, testing and deployment of MQSeries applications while greatly simplifying the entire development process.

TXDeveloper:

- Provides an integrated graphical Workbench for design input, server development and application deployment;
- Automatically configures the application for the MQSeries environment, eg. creating and managing queues, registering programs, security principals, etc.;
- Builds applications servers, generating the interface layer between the business logic and MQSeries API;
- Provides significant out-of-the-box infrastructure for security, auditing and monitoring under MQSeries;
- Generates database access servers;
- Provides access to core MQSeries environment administration commands, logfiles, etc.;
- Accelerates the use of MQSeries for application mining, enterprise application integration or e-commerce enablement.

Contact: For further detail, white papers etc, please contact by e-mail: [regprods@ssa.co.uk](mailto:regprods@ssa.co.uk)

Summary: BPCS Exchange is an interface product which facilitates easy use of SSA's Semantic Message Gateways (SMGs) to create interfaces between BPCS and third party, legacy and "best of breed" systems. BPCS Exchange can retrieve data from a variety of streams (e.g. files, message queues, memory etc.) including MQSeries. It uses adapters to process data in a number of formats to pass to SMGs in order to process BPCS Client/Server transactions. It can also retrieve data from BPCS Client/Server (via SMGs) and pass this data to any of the adapters and streams. The MQSeries offering is available on both the AS/400 and HP/UX platforms, for all versions of BPCS Client/Server from 6.0.02 onwards.

**Sterling Software**Contact: [coolinfo@sterling.com](mailto:coolinfo@sterling.com)URL: <http://www.sterling.com/cool>

Available: Worldwide: North America 1.877.SSW.COOL; Outside North America +44.(0)1932.587000

Summary: COOL:Gen is the proven environment for delivering e-business applications, integrating legacy software with new systems, and producing components, all by means of flexible methods for developing business objects and models from which to generate internet, mainframe, and robust client/server applications. From the application model COOL:Gen generates and builds applications which interact via IBM MQSeries. COOL:Gen generates the procedure logic in C for the distributed platforms and in COBOL for the IBM mainframe. The IBM mainframe applications execute as CICS or IMS transactions. Included in the product are MQSeries-specific runtime modules required to build the application. Generated clients may be browser-based via COM/Java proxies, custom via a C proxy, or GUI applications.

**Sybase, Inc.**

URL: <http://sybase.com/products/eventbroker/index.html>

Contact: 6475 Christie Ave Emeryville  
CA 94608 Tel. 510 922 3500

Available: Worldwide

Summary: Sybase Enterprise Event Broker "event enables" corporate database applications for event and information delivery without requiring changes to existing application code. Enterprise Event Broker Captures, Transforms and Delivers business events across the enterprise enabling custom and standalone applications to transmit information to other applications. It automates the capture and delivery of business events across the enterprise while giving customers the flexibility to define their own transforms. The events are transported over the messaging infrastructures of IBM MQSeries and TIBCO TIB/Rendezvous. Enterprise Event Broker enables a two way link between messaging infrastructure and databases without having to write code. In addition it is database independent, with support for Sybase, DB2 on MVS, Oracle and Informix.

**Systek Information Technology Ltd.**

URL: <http://www.systekit.com>

Available: Offices located at Hong Kong, Singapore, Shanghai (China).

Summary: MQSeries has played an important role in a number of projects carried out by Systek Information Technology Ltd. (SYSTEK) on behalf of its clients in the International Banking and Finance sector. Various aspects of the deployment of MQSeries, including messaging system architecture, analysis, and implementation, are covered in these projects.

Currently, SYSTEK is working towards "XML enabling" of applications through the use of MQSeries as the underlying enterprise messaging facility. It serves as a demonstration of a way of integrating XML with MQSeries.

**Themis, Inc.**

URL: <http://www.themisinc.com>

Available: Worldwide

Summary: Themis has provided MQSeries education since early 1997. The courses provide application programmers and designers with the knowledge to implement MQSeries applications on many different platforms. Our consultants can offer implementation assistance, problem resolution and performance management for MQSeries on Windows NT, OS/2, MVS/ESA and OS/390. We are also involved with a project employing MQSeries on UNIX. Rounding out our education offerings, Themis staff also have extensive experience in CICS and DB2, producing a robust set of classes in each of these topics. In future, Themis will offer MQSeries software aimed at application development as well as courseware related to software products (like MQSeries Integrator) based on MQSeries.

Summary: Tivoli Manager for MQSeries is an enterprise management solution for IBM MQSeries commercial messaging software. It is the only MQSeries management product that addresses the life-cycle of MQSeries networks by deploying software components, configuring MQSeries objects, monitoring processes, managing events, and automating routine tasks. It is also one of the only MQSeries management product that manages the entire application stack, from low-level network and operating system resources up through the applications which use MQSeries for messaging. Built on the proven scalability of Tivoli's open Tivoli Management Framework, the Tivoli Manager for MQSeries provides centralized management for distributed MQSeries networks that span geographic distances and heterogeneous systems.

**Tolima Informatic**

URL: <http://www.tolima.com>

Available: Switzerland (Europe)

Summary:

- We employ Certified MQSeries Engineers and have experts for MQSeries Design and Implementation
- Broad experience of developing complex MQSeries Application on various platforms including but not limited to OS/390, AS/400, AIX, OS/2, Windows and Solaris.
- Specialists for using MQSeries with PL/I and Visual Basic
- Involved in developing several mission-critical MQSeries Application within the financial industry
- Availability of Modules, which provide a higher level API to MQSeries. This code makes using MQSeries as easy as reading or writing to a file

**Ultima Inc.**

URL: <http://www.ultima.com.tr>

Available: Europe

Summary: Ultima is a leading message oriented middleware solutions provider in the global technology industry, offering total IT solutions along with an array of innovative services that help our customers to build integrated distributed computing environments.

Ultima is an enabler for building network-ready applications and for integrating discrete applications to run in a networked environment. It is message queuing middleware (MQSeries) that allows disparate applications or different modules of a distributed application to communicate via a bulletproof message delivery mechanism. Ultima solutions and MQSeries certified Ultima team ensure reliable, once and only once delivery of data between applications or application modules, even over unreliable networks

Contact: James Martin

[jmartin@vertexindustries.com](mailto:jmartin@vertexindustries.com)

973-777-3500 ex. 294

Available: North America through Vertex Industries, Europe, Asia and Australia through authorized distributors

Summary: Vertex Industries provides middleware and e-commerce tools that allows data to be exchanged between legacy systems and distributed computing environments. The 'evolve' suite of middleware products leverages the ability of XML to create self-describing messages and Enterprise Java Beans to transport those messages across heterogeneous systems. Evolve has been integrated with IBM MQSeries and other middleware products for e-commerce and knowledge management applications. The 'evolve' suite provides transport, translation and data transformation to complete a cross platform transaction. Support for many popular legacy platforms and workstation operation system include IBM, HP Unix, Tandem, Windows NT/9x and Linux.

**Viewlocity**

URL: <http://www.viewlocity.com>

Available: Americas, EMEA, Asia-Pacific

Summary: Viewlocity provides the e-infrastructure for online trading communities and supply chains. Like MQSeries, Viewlocity's solutions take a neutral position from which it can deal with complex realities of e-Business. By implementing a message broker, such as Viewlocity, combined with the robust message delivery capabilities of MQSeries, companies have an independent intermediary, reliably brokering the exchange of information between different applications. The combination of Viewlocity and MQSeries enables companies to create a flexible, standard interface, which effectively 'brokers' data between any platform, application, network, systems and people, both within the enterprise and with multiple trading partners. Using the two products together provides customers with a solid foundation for e-business, underpinning business-to-business e-commerce via a real-time, many-to-many message integration engine and a powerful transaction matching infrastructure
