IBM

# IBM Migration Utility for z/OS Version 3.1

Highlights

- **Preserve investment in CA-EasyTrieve® Plus programming skills:** Users can continue to write new and maintain existing programs using EasyTrieve Plus language

- **Enhance productivity with included utilities:**
  - **Discovery Utility:** Find out what programs are currently written using EasyTrieve Plus language
  - **Batch Conversion Utility:** Send groups of programs to Migration Utility instead of one-by-one
  - **Parallel Testing and Electronic Output Comparison Utility:** Significantly reduce the time spent on testing and verifying output after migrating applications

The IBM Migration Utility for z/OS® Version 3.1 can be used in several ways:

• Existing and new EasyTrieve Plus programs using EasyTrieve Plus language can be processed by the Migration Utility product. The source code remains in the original library.

• Programs written using EasyTrieve Plus language can be processed by the Migration Utility product. The source code remains in the original library.

• The IBM Migration Utility for z/OS Version 3.1 creates IBM standard COBOL syntax from EasyTrieve Plus language statements, without having to have the EasyTrieve Plus product installed. The IBM Migration Utility runs in place of the EasyTrieve Plus interpreter. Source code, written in EasyTrieve Plus language, can continue to be maintained.

Recent Updates

- **Support for CA- Easytrieve language:** Support for the predecessor of the CA-Easytrieve Plus® language.

- **Create reports in HTML:** New or existing Easytrieve or Easytrieve Plus programs can now easily create reports in HTML and automatically deploy them to the web server, avoiding expensive and error-prone processes.

- **Create Character Separated Values (.csv) output files:** New or existing Easytrieve programs can automatically generate Character Separated Values output files for easy use with office applications like spreadsheets, without cumbersome cut-and-paste or export/import processes.

- **Create HTML "Drill Down" reports:** Create linked HTML "Drill Down" reports and automatically deploy them to the web server, creating multiple reporting levels (linked to one another in one step, potentially eliminating the need for multiple separate reports.

- **Analysis of Program Abends:** Identify original failing program statements.

Migration Utility - Overview/Objectives

®
business

Hardware Requirements

• An IBM eServer zSeries machine capable of running the required software

Software Requirements

• One of the following operating systems:
  • OS/390 V2R10 (5657-A01), or later
  • z/OS V1R2 (5694-A01), or later

Services

IBM services can help you to educate your staff, get your organization started with conversion, and help keep the learning curve to a minimum. IBM offers several packages with a range of services including:

• Basic and test tool education (including getting an organization started with program conversion)
• On call support

Customized services can also be developed when your requirements are more extensive. Contact your IBM sales representative or one of the following for more information:

Bruce Villard, Migration Utility Services Coordinator: brucev@us.ibm.com

Bob Teter, Migration Utility Product Manager: teterb@us.ibm.com
