# Infrastructure Solutions Architect, IBM GTS ASEAN

IBM Certified IT Architect, Certified ITIL Service Manager, Open Group Master Certified Architect Cloud Computing, SOA, J2EE, Business Intelligence tennis/futsal player, gamer, mountain trekker

# Cloud is a shift in the consumption and delivery of IT with the goal of simplifying to manage complexity more effectively.

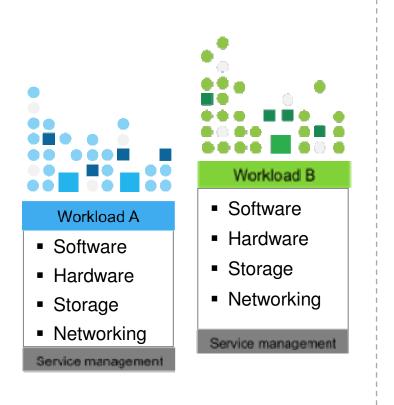

- Cloud is:
  - A new consumption and delivery model
- Cloud addresses:
  - Cost reduction
  - Scale
  - Utilization
  - Self-service
  - IT agility, flexibility and delivery of value
- Cloud represents:
  - The industrialization of delivery for IT supported services
- Cloud includes:
  - Deployment models: public, private, hybrid
  - Delivery models: Infrastructure as a Service (IaaS),
     Platform as a Service (PaaS), Software as a Service (SaaS) and Business Process as a Service
  - Focus on the End user self service delivery

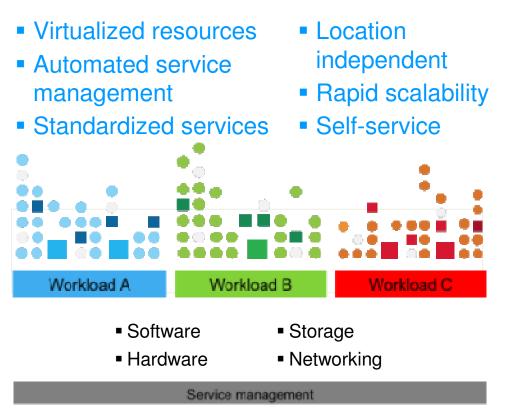

**IBM** Smarter Business and Technology Series

### What is different about cloud computing?

Without cloud computing

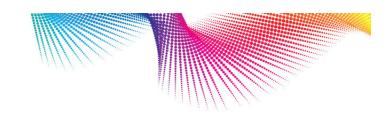

#### With cloud computing

Note: Elements of cloud computing taken from NIST, Gartner, Forrester and IDC cloud computing definitions

### IT benefits from cloud computing are real

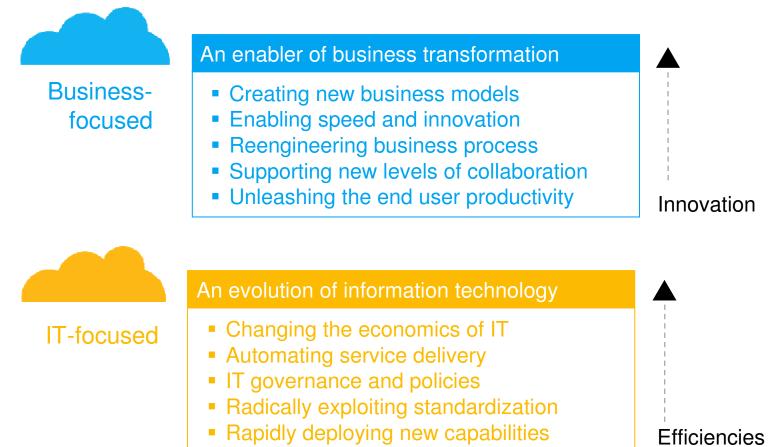

#### Results from IBM cloud computing engagements

Increasing speed and flexibility	Test provisioning	Weeks	Minutes
	Change management	Months	Days/hours
	Release management	Weeks	Minutes
	Service access	Administered	Self-service
	Standardization	Complex	Reuse/share
	Metering/billing	Fixed cost	Variable cost
Reducing costs	Server/storage utilization	10–20%	70–90%
	Payback period	Years	Months

SOURCE: Based on IBM and client experience.

# The emerging agenda: the impact of cloud computing is extending into driving business transformation

# Time to Market

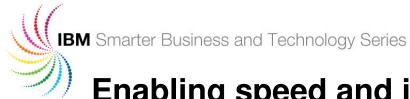

# Taking new capabilities to market faster

Enable new revenue streams Faster time to market Decreased barrier to entry of new services

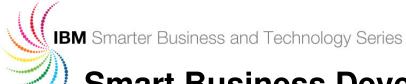

Enabling speed and innovation...

# **New Business Opportunities**

Created and delivered new cloud services Back up via secure high speed network Fully managed in the Cloud

### Smart Business Development & Test Cloud

# Taking new capabilities to market faster

Reduced labor and infrastructure need to develop and deploy new services

Decreased new application deployment time from 10 weeks to <1 week

Accelerating business transformation

**LotusLive Collaboration** 

# Improving collaboration in a 300,000 person team

# Panasonic

Achieved new levels of collaboration among 300,000 employees, vendors, and partners

Saving 30 minutes per day or 120hr per year per person

**IBM** Smarter Business and Technology Series

### **Smart Business Desktop Cloud**

# Empowering a 34,000 person workforce

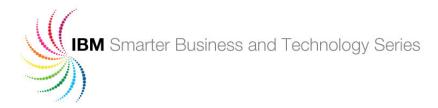

Bank of Tokyo-Mitsubishi UFJ

Empowered workers to anytime, anywhere access

Improved security with better data leakage control

Lowered cost of support and upgrade

# This new agenda presents opportunities and challenges for our Clients

Clients want understand how cloud computing can transform the way they do business

They want to maintain a level of security and privacy equal to or greater than their traditional IT

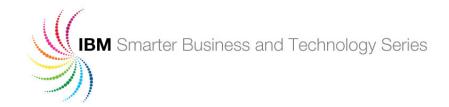

And they want to do it on a platform that allows them to deliver, consume and integrate new services

# Three major categories through which IBM is helping our clients to deliver business value from Cloud Computing

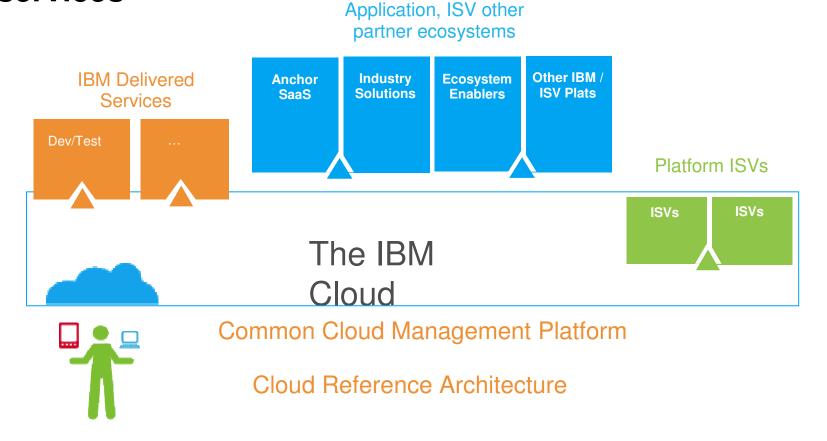

The IBM Cloud as a platform for Business	Managing Cloud Risk and Security	Transforming with Industry Clouds
Expanding IBM's cloud offerings and partner ecosystem to create a business platform for growth and innovation	Address security and risk management concerns with IBM's security experience, focus, software and frameworks	Drive business transformation, leveraging IBM's deep industry expertise, assets and cloud capabilities
movation		

# Leveraging the IBM Cloud platform – an ecosystem of services

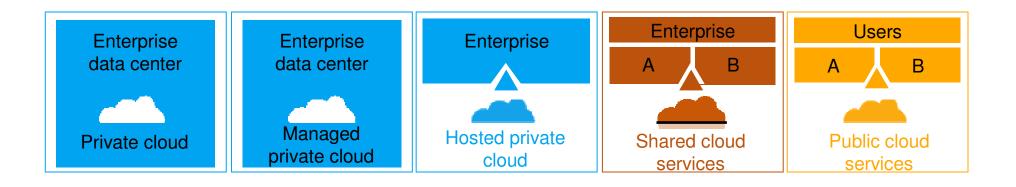

# Delivering the IBM Cloud platform through a spectrum of delivery models

#### **Private**

IT capabilities are provided "as a service," over an intranet, within the enterprise and behind the firewall

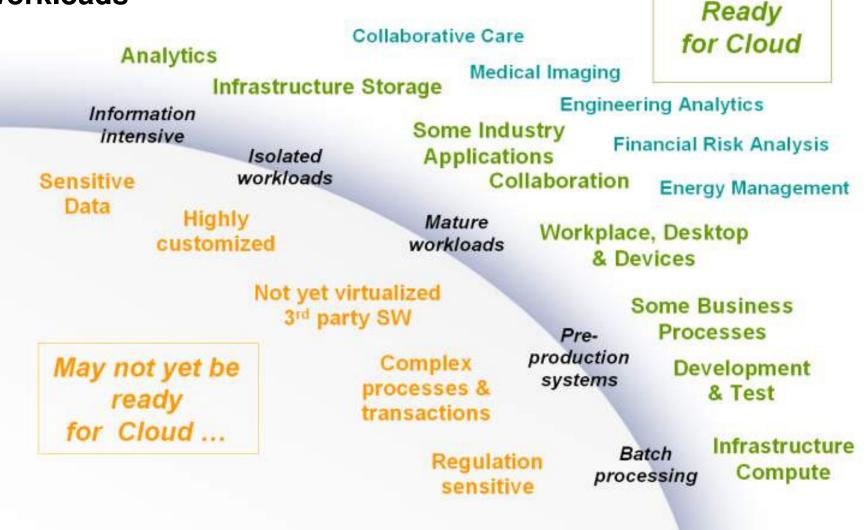

Public IT activities / functions are provided "as a service," over the Internet

**Hybrid** Internal and external service delivery methods are integrated

#### Clients are leveraging this cloud platform for different workloads

# A strategy is key in a thoughtfully mapping your journey to Cloud and the value it will drive

**Characteristics of Cloud Workloads** 

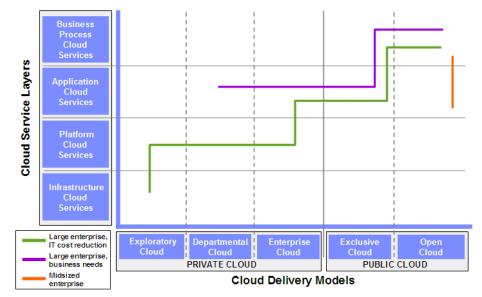

**Cloud Adoption Framework** 

Identify candidate workloads

Cloud Workload Analysis

Gap analysis of cloud capabilities

Cloud Assessment and Roadmap

# IBM Smart Business Cloud Services and Systems to help you build and/or manage a cloud computing deployment

## Managing Cloud Risk and Security - End to End

People and identity Mitigate the risks associated with user access to corporate resources

#### **Application and process**

Help keep applications secure, protected from malicious or fraudulent use, and hardened against failure

#### **Data and information**

Understand, deploy and properly test controls for access to and usage of sensitive data

#### Network, server and end point Optimize service availability by mitigating risks to network components

#### **Physical infrastructure**

Provide actionable intelligence on the desired state of physical infrastructure security and make improvements

# Cloud security assessment & roadmap

Provide a security best practices gap analysis of your cloud so

- Helps assess the maturity of your cloud solution's security controls and mechanisms
- Compares against best practices and your cloud security objectives
- Provides recommendations to strengthen the security posture of your cloud to help prevent security breaches
- Leverages IBM expertise to provide actionable recommendations for closing security gaps

n

## Hosted vulnerability management

Streamline security vulnerability management and manage compliance

- Helps manage compliance with security initiatives by scanning for and classifying vulnerabilities
- Provides remediation steps and data to assess and manage security risks to help reduce threat exposure
- Helps reduce cost and complexity of security maintenance through IBM cloud security services

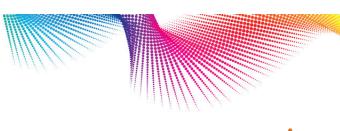

## Protecting mission critical workloads...

- •Vulnerability managed service from the IBM Cloud
- •Deep scanning across infrastructure
- •Protect network devices, servers, data bases and web aps
- Advanced remediation guidance
- •Comprehensive reporting through self service portal

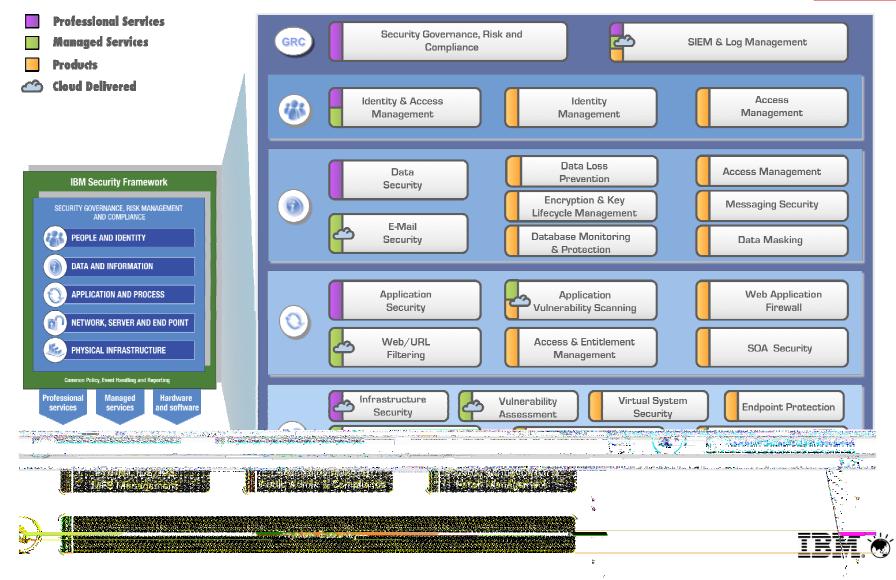

IBM Smarter Business and Technology Series

#### IBM security portfolio... solutions to meet clients' needs

#### Industry Transformation – enabled by Cloud Computing

#### Industry Vertical Portfolio of Cloud Offerings and Services

Industry Vertical Business Services Designed and delivered with clients and partners	Applications and Services	Applications and Services	Applications and Services
Workload Optimized Industry Cloud Platforms	Industry Cloud Platform	Industry Cloud Platform	Industry Cloud Platform
On a platform of robust			

infrastructure services and products Enterprise

**Cloud Infrastructure** Enterprise-class infrastructure services and products

IBM Smarter Business and Technology Series

# Moving Communication Service Providers to Cloud delivery providers

CREATE	MANAGE	MONETIZE
Rapidly Launch Partner Enabled Apps/ServicesInfuse Creativity Into the Service PortfolioMarket White Labeled IBM Cloud Services	Exploit Advanced Automation Rely on Carrier Grade Performance and Unmatched Scalability Deliver Highly Secure, Quality Assured Services	Maximize Effectiveness of Sales Channels Leverage Intelligence for Differentiation Optimize Self-Service Web Portals
Ignite Innovation and Differentiate the Service Portfolio	Leverage Integrated Service Management	Energize Cloud Sales & Optimize the Customer Experience

## Federal Community Cloud...

- Cloud services delivered out of • IBM's FISMA compliant Data Centers
- Infrastructure as a Service (laaS) ٠ virtual images
- Platform as a Service (PaaS) virtual ٠ images
- Monthly subscription based pricing ٠

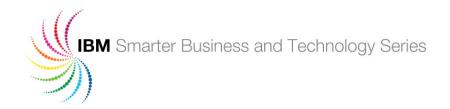

**Private & Pre-Configured Cloud Offerings** 

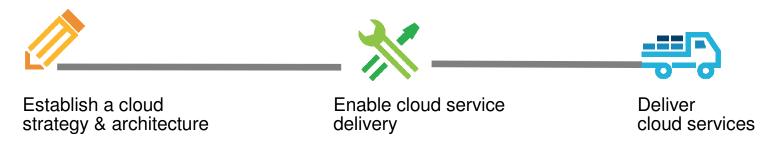

# These three themes – and the related client challenges – span the full cloud plan-build-deliver capabilities

Expanding IBM's cloud offerings and partner ecosystem

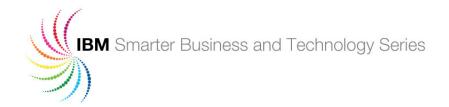

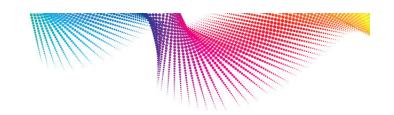

Address security and risk management concerns with IBM's security experience, focus, software and frameworks

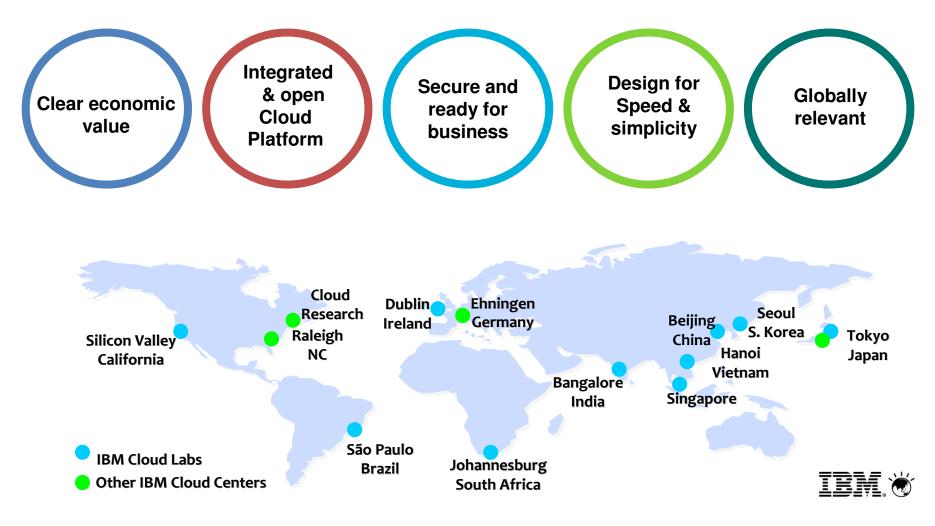

Drive business transformation, leveraging IBM's deep industry expertise, assets and capabilities

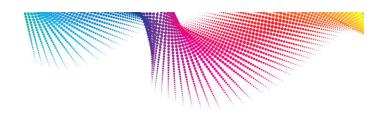

### Enterprise-level cloud solutions require enterpriselevel capabilities

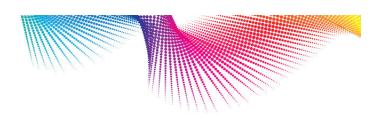

# For more information, please visit: <a href="http://www.ibm.com/cloud">http://www.ibm.com/cloud</a>

Creating new business models...

- •New end user service delivery
- •Enable new revenue streams
- •Faster time to market
- Decreased barrier to entry of new services
- •Enhance current customers' experience

# Enabling speed and innovation...

Created and delivered new cloud services
Offsite data protection at onsite speeds
Back up via secure high speed network
Integrates into companies existing network
Fully managed in the Cloud

### **Re-engineering business processes...**

- •Developers request resources through a portal.
- •Development and Testing processes standardized
- •Environments are provisioned in minutes
- •Software configurations are consistently deployed every time
- •Utilizes standardized, stored workflows.

## Supporting new levels of collaboration...

- Adopting LotusLive globally
- •Global email and collaboration platform
- •Workforce can collaborate more effectively
- •Allows for collaboration across the value chain
- •Did not want to compromise security and privacy

## Unleashing end user productivity...

- •Private desktop cloud
- •Greater remote flexibility
- •No sacrifice of control
- Scalable for extensions
- •Supports business continuity and disaster recovery
