Manage Anything Java™

Wily On-Demand Integrator™

"The fastest, lowest-cost path to SecureWay On-Demand Server."

Introducing the On-Demand Integrator™, by Wily™ Technology, Inc. The On-Demand Integrator enables any Java™ applet to integrate directly with IBM SecureWay™ On-Demand Server with *Zero Impact* on the applet's developer, and *Zero Impact* on the professional who deploys that applet. With the On-Demand Integrator, IT professionals can manage all of their web applications from a single software package, the SecureWay On-Demand Server.

REDUCES DEVELOPMENT COSTS TO ZERO

IBM's SecureWay On-Demand Server introduces a new, powerful software management and distribution paradigm. Web applications can be centrally configured, licensed, traced, and managed from a unified, thin-client console, cutting software distribution, maintenance and management costs significantly. However in order to benefit from the majority of these services, Java applets must be re-authored by their developers to integrate into the management toolkit provided by SecureWay On-Demand Server.

On-Demand Integrator eliminates this often time-consuming and expensive task. Using Wily's patent-pending Java instrumentation technology, the On-Demand Integrator instantly integrates any Java applet into the SecureWay On-Demand Server framework.

SPEEDS DEPLOYMENT

Other application management systems can take months to implement and deploy. The protracted process can be technically challenging and expensive.

On-Demand Integrator instruments and deploys any applet in minutes.

e-business

IBM ® Business Partner

The On-Demand Integrator Architecture. This easy-to-use application presents the lowest-cost path to complete web application management.

*"From zero to e-business
in 60 seconds."*

Never before has it been possible to dramatically increase the manageability of mission-critical software so easily and quickly.

SIMPLIFIES AND CONSOLIDATES MANAGEMENT OF ALL JAVA CLIENT SOFTWARE

Administrators can now customize and monitor all Java applets from a single consolidated console. On-Demand Integrator extends these benefits to applets that are not already enabled for SecureWay On-Demand Server.

Similarly, the SecureWay On-Demand Server Applet Launcher can now host all your applets, providing your end users with a single, secure launch point for all of your web applications.

### INCREASES ROI ON EXISTING JAVA INVESTMENTS

On-Demand Integrator instantly strengthens previously developed and purchased applets by adding SecureWay On-Demand Server's user profile management, licensing facilities, exception tracing, and logging support. The result: improved access control, reduced downtime, and lowered administration costs for software you already own.

IMMEDIATE TIVOLI INTEGRATION

Automatic Tivoli-based event management of every applet in your enterprise can be yours immediately with no additional work or cost. For the first time, true enterprise scale management extends to the thin client. Wily provides you with the simplest Tivoli integration solution available anywhere.

REALIZE THE FULL POTENTIAL OF THE JAVA THIN CLIENT

IT Professionals have long been aware of the immense benefits Java can bring to an enterprise. Java promises to lower costs and securely extend your company's network to your business partners and customers. But until today, the industrial-strength management architecture for Java on the client has been out of reach.

The On-Demand Integrator's simple interface enables rapid, simple deployment and integration. No programming required!
