## IBM eNetwork Communications Server for Windows NT 5.0 and MQSeries have received "Designed for Microsoft BackOffice" logo certification

Somers, NY, June 2, 1997: IBM today announced that its eNetwork Communications Server for Windows NT 5.0 and MQSeries<sup>(R)</sup> have received "Designed for Microsoft

BackOffice" logo certification.

IBM's continued focus on achieving the Designed for Microsoft BackOffice<sup>TM</sup> logo certification demonstrates the company's commitment to provide software that integrates smoothly in an NT environment. The logo will appear on future eNetwork Communications Server for Windows NT and MQSeries packaging and marketing collateral. IBM's DB2 for Windows NT received "Designed for Microsoft BackOffice" certification last year.

The IBM eNetwork Communications Server for Windows NT is an integral part of IBM's eNetwork software family that provides host and Internet access, multi-protocol integration, and end-to-end connectivity solutions to interconnect people to the information they need with enterprise-class dependability and network computing support for e-business. Communications Server is an industrial

strength communications solution supporting all major platforms including AIX, OS/2, OS/390, Windows NT and NetWare, and is fully interoperable with OS/400 environments. SNA applications running on familiar LAN-attached desktop environments can communicate across both SNA and TCP/IP to host-based SNA applications.

MQSeries is IBM's award-winning advanced software that provides the reliable transfer of information between applications regardless of the type of computer or network utilized. MQSeries runs on more than two dozen leading business computing platforms, including IBM, HP, Digital, SUN, Windows and Windows NT.

IBM is the largest independent software vendor in providing solutions on Windows NT.

For additional information, customers can contact their IBM representative. Internet users can find additional information on the IBM eNetwork Communications Server for Windows NT at <http://www.networking.ibm.com/eNetwork> and on MQSeries at <http://www.hursley.ibm.com/mqseries>.
