

IBM On-Premise Digital Analytics Roadmap and Strategy

Mike Lu

Product Manager, Digital Marketing & Analytics EMM

Agenda

- Strategic Direction
- Digital Analytics Accelerator
- Impact to NetInsight Customers
- Roadmap

DIRECTION

- Two web analytics solution under IBM EMM portfolio in Coremetrics and NetInsight
- Increasing trend of customers with lesser data requirements migrating to SaaS solutions (Coremetrics) and adoption of Netezza
- Re-invest in on-premise web analytics market leveraging NetInsight platform and PureData Systems for Analytics database (Netezza) focused on scalability and performance
- GOALS

➢ Reduce development overhead

Increase import and report generation performance to handle high volumes

➢ Robustify architecture for high scalability

CUSTOMER PAIN POINTS TODAY WITH NETINSIGHT

- Data is updated once a day to avoid competing with application server and database resources
- Update cycles need to be scripted by customer so updates are either serial or unknowingly contending for resources causing undesirable time delays
- Update cycles run over so users are trying to run ad-hoc reports and competing for resources
- As a result, can't leverage the pre-generated reports so rely on ad-hoc-but it is a vicious circle

STRATEGY

- PureData (Netezza) central to next generation on-premise web analytics strategy
- Re-architecture of NetInsight backend
- Release end-to-end on-premise web analytics solution that will be easier to deploy, manage and troubleshoot with high scalability and performance

IBM. 🍯

IBM Digital Analytics Accelerator: highly scalable solution for organizations that prefer to deploy web analytics on premises

- Use a one-stop-shop offering, incl.:
 - Digital analytics software
 - Clustered application servers infrastructure
 - High performance database appliance
- Single, integrated solution offering combining components from EMM, PureData and XSeries

Spend less time & resources on data management issues, more time for analytics and marketing

IBM PureData System for Analytics:

Optimized exclusively for analytic data workloads

PureData System for Analytics

Delivering data services for analytics

Speed

- 10-100x faster than traditional custom systems*
- Patented MPP hardware acceleration (Massively Parallel Processing)

Simplicity

- Data load ready in hours
- No database indexes
- No tuning
- No storage administration

Scalability

Peta-scale data capacity

Smart

- Designed to runs complex analytics in minutes, not hours
- Richest set of in-database analytics

* Based on IBM customers' reported results. "Traditional custom systems" refers to systems that are not professionally pre-built, pre-tested and optimized. Individual results may vary.

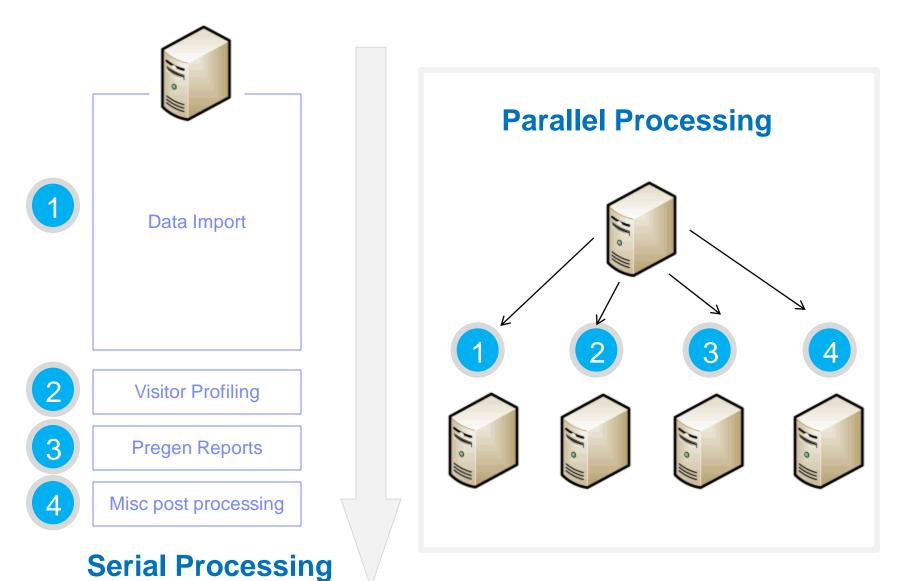

Digital Analytics for On Premises (DAOP)

- "New" web analytics software (successor to Netinsight)
- DAOP leverages NetInsight reporting engine and UI with new backend architecture for high scalability and to robustify import and report generation performance
- Supplemental software: DB2 and LSF
- Open source software package (RedHat and Apache)
- Operational Dashboard

NetInsight Rearchitecture Overview

IBM Xseries Business Servers

Configured and optimized for DAOP and PureData Systems for Analytics

- IBM x3550M4
- Intel XEON E5-2680 processors (16 total cores)
- GOOGB 10K SAS Drives (4 Disk RAID 1) 2 Disk for adjunct nodes
- ■64GB RAM
- 10GB Ethernet Ports

Software stack overview

- NetInsight \rightarrow Digital Analytics for On Premises 1.0
 - New product line "successor" to NetInsight (leverages UI and reporting engine to support new architecture for parallel processing)
- Platform Computing LSF (stands for Load Sharing Facility)
 - Process scheduler installed on the master controller that will farm out jobs to adjunct servers
 - Will enable real-time reporting in future releases
 - Will enable native email scheduling in future releases
- DB2 Workgroup (Metadata)
 - Utilized to consolidate all configuration files in NetInsight
 - Will enable easier profile management in future releases
- Operational Dashboard
 - Developed by EMM to help customers monitor system health and troubleshooting
- Open Source
 - Apache
 - RHEL6.2 OS

IBM. 🗑

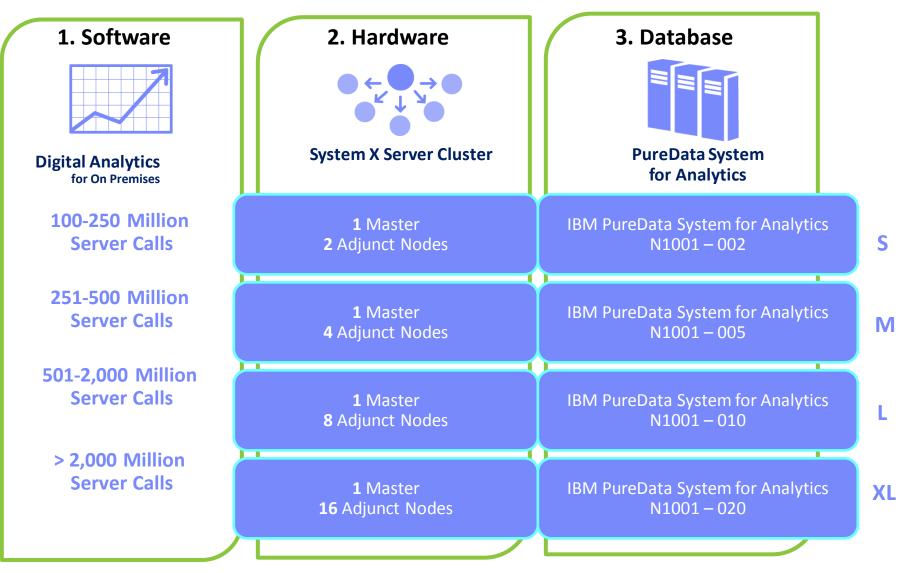

Digital Analytics Accelerator solution components

Customer provides page tag data collection servers and external SAN for log file storage

IBM. Ö

Configure the solution to scale with your web traffic volumes

How is Customer Support provided?

- Single Point of Entry Model
- Staffed by EMM
 - Trained (high level) in PureData and Systems X
- Triaged at entry with PureData and Systems X issues routed to appropriate Support resources

End of market for Unica NetInsight On Premises

End of market

- Given the trend to using SaaS based web analytics in the lower-end of the market, the NetInsight product will be declared "end-of-market"
- All NetInsight versions with support for Windows, Oracle, SQL Server etc. will not be sold post EOM
- Existing NetInsight customers
 - will continue to receive support IBM 5+3 support model
 - Continued phone support, Severity 1 fixes via patch and maintenance releases
 - No major releases (e.g. x.0, x.x, x.x.x)
- Existing NetInsight and Netezza customers
 - Migration path available
 - Customer's responsibility to procure required application servers
 - Can contract with EMM Lab Services to perform the migration

Digital Analytics Accelerator Roadmaps
