# Shopz access:
## We've put the master key in your hands

*New functionality provides enterprise-wide access controls*

Shopz is the online solution for ordering and delivery of System z® software products, used by customers worldwide to plan, purchase and track orders online, 24/7.

**Productivity, plus.** Now Shopz adds new functionality to its feature set with ***Roles Authorization Management (RAM)***, which provides flexible usage management controls for Shopz access for your organization. Using Shopz has always saved our clients time and money; with RAM, the potential productivity benefits increase — along with new levels of collaboration, security and auditability.

**Your rules, your roles, your way.** RAM empowers you to assign different levels of Shopz access within your organization, based on rules, roles and policies that you define. These enhanced access controls allow you to customize the ordering process, enabling you to:

- Boost productivity
- Speed ordering
- Improve transaction transparency
- Reduce maverick activity
- Improve cost control in usage of Shopz

**You asked, IBM delivers.** Customizable access management was the #1 request from Shopz customers. Delivering this capability demonstrates IBM's commitment to, and support of, our System z client community.

**Experience the new Shopz.** Whether you're new to Shopz or an established user, you can visit the Shopz site to learn more about the new RAM capabilities and experience them first-hand.
