True Economics Lead to Accurate Visibility of IT Costs

Tell Me The Truth About My Data Center Costs

How do I get visibility into the true economics of my data center?

What is the true allocation of labor and power costs for all my system workloads?

What is the true cost for System z and distributed environments?

Typical Cost Allocation Uses False Economics

- Rough estimates are used rather than resource usage data to identify accurate costs for both System z and distributed environments
- Using linear costs rather than incremental costs for additional mainframe workloads
- Disproportionate allocation of data center (e.g. power, labor) to System z
- Server consolidation analysis does not take System z specialty processors into account

Hidden distributed costs must be exposed as the infrastructure grows

Source: IDC, *Virtualization 2.0: The Next Phase in Customer Adoption*, Doc #204904, Dec 2006

True Economics: Measuring IT Resource Use Leads to Cost Transparency

- Understanding the cost of delivering IT services
- Determine line of business, product and service profitability
- Identifying the business transactions that drive IT cost

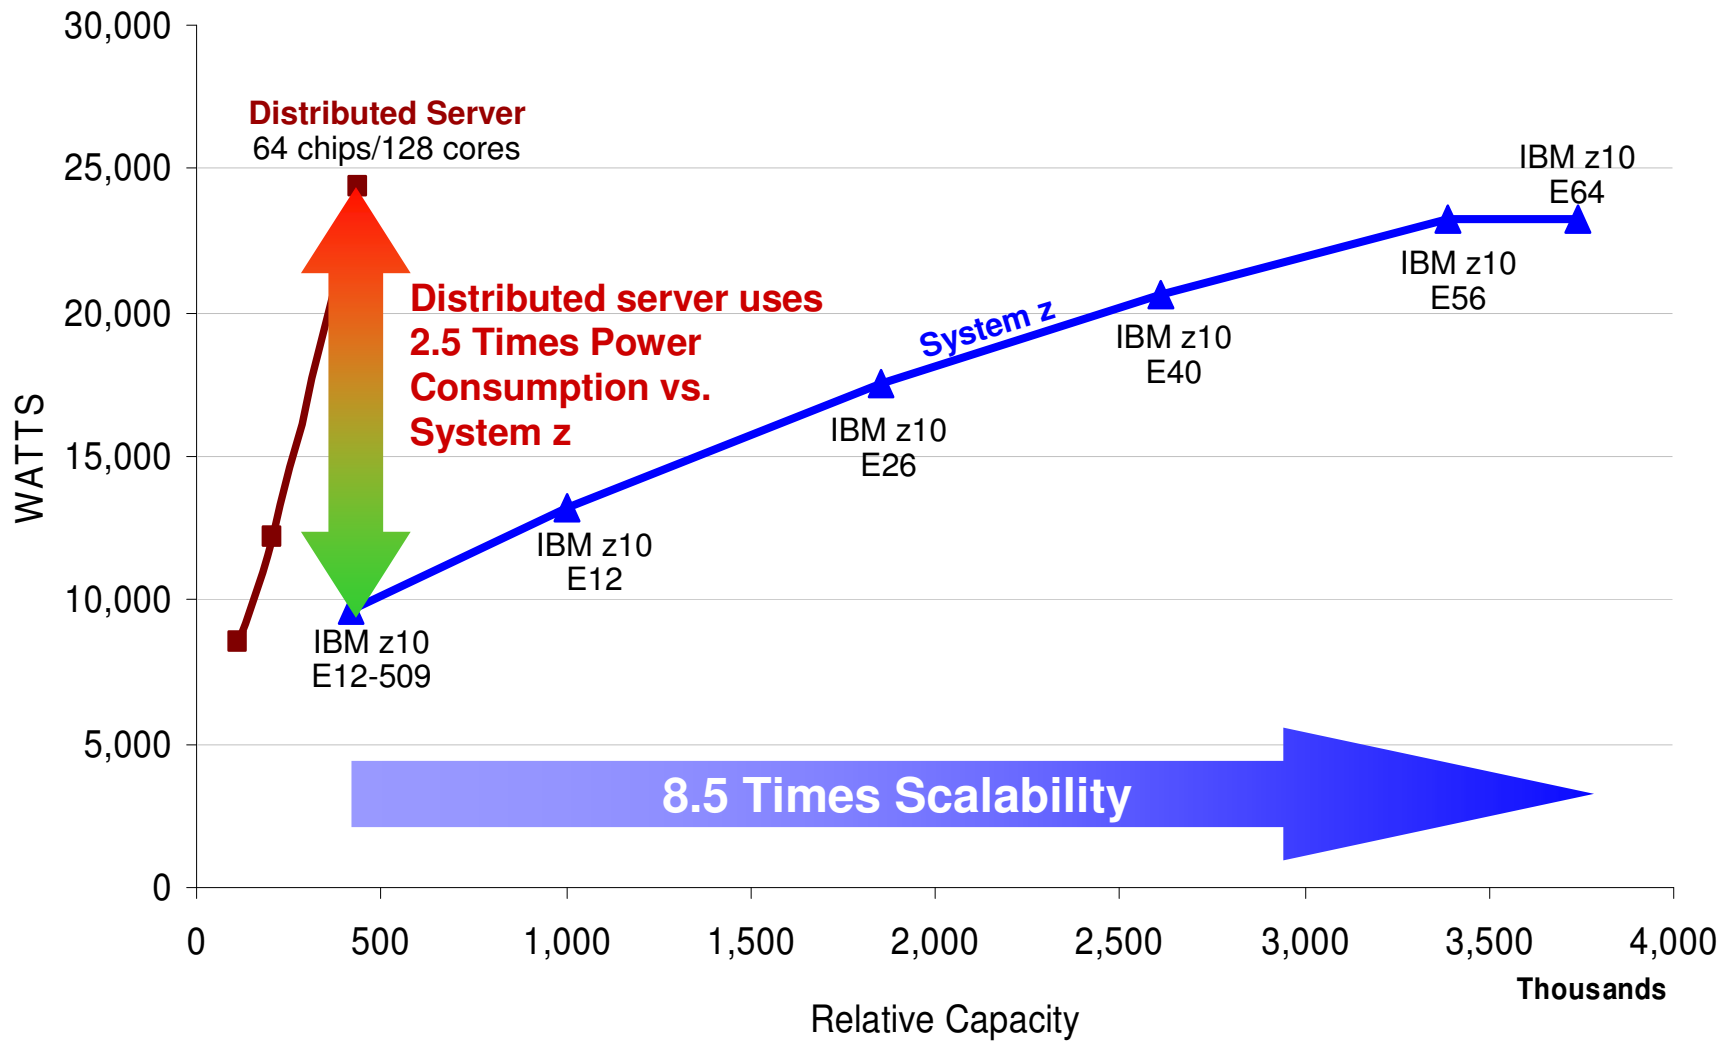

Last Months IT Usage by Department

True Economics: Mainframe Cost/Unit of Work Decreases as Workload Increases

True Economics: Real distributed power costs are hidden in typical cost allocations

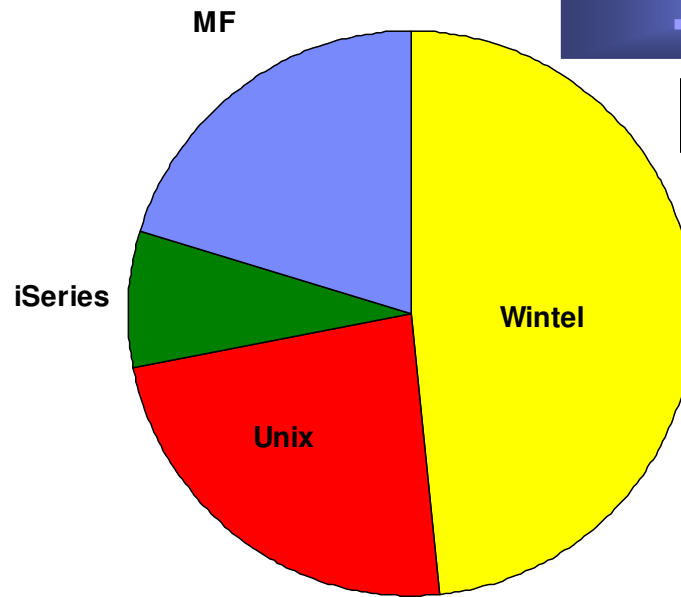

True Economics: Distributed systems require more headcount per Workload (capacity) than System z

Used Capacity

Dedicated Infrastructure Staff

- Customer Profile
 - 1800 servers, 1 location
 - New CIO, "get off the MF"
 - Focused on reducing cost

Capacity/ Labor Ratio

Used RIPS / FTE	
Wintel	552
Unix	578
iSeries	2198
MF	1937

IBM TCO study

Relative Internal Performance is a cross-architecture capacity metric used here. It is to be used only within the context of this study and cannot be compared to external benchmarks or other IBM performance ratings. Load or Used RIPS is the product of estimated utilization and RIP per instance for all 1800+ server instances.

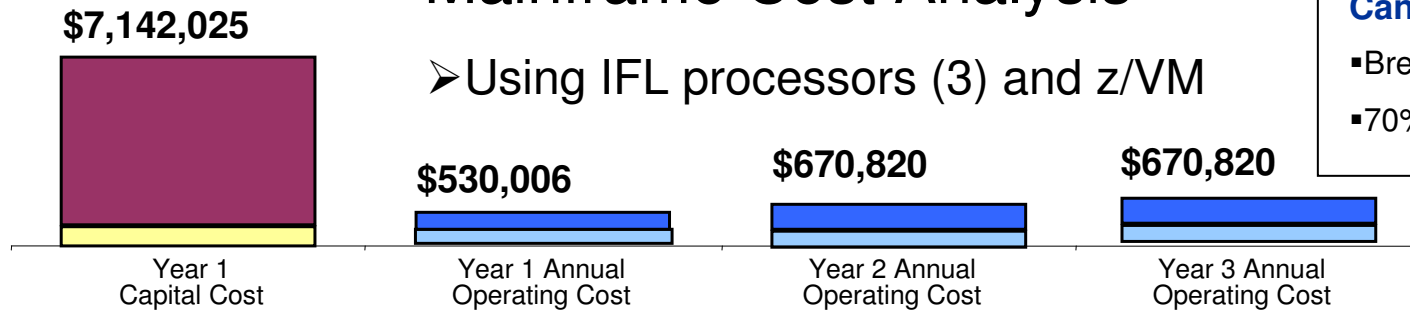

True Economics: Consolidate on System z Using IFLs

Mainframe Cost Analysis

➤ Using IFL processors (3) and z/VM

**IBM TCO Case Study:
Canada Government Agency**

- Breakeven year 1
- 70% Cost reduction over 3 years

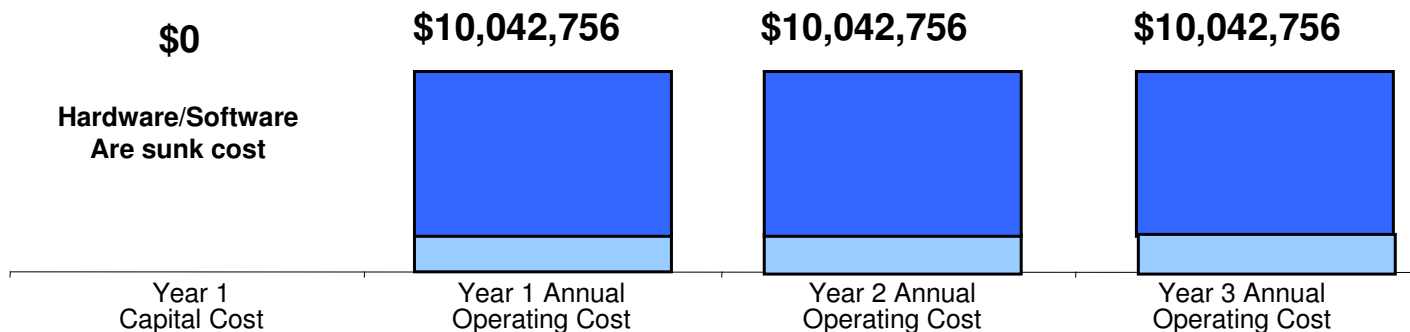

Total cost = **\$9,013,671**

**3 IFLs
vs
292 servers**

Distributed Cost Analysis

➤ Keeping dedicated servers (292)

■ Hardware OTC
■ Software OTC
■ Subscription
■ Maintenance

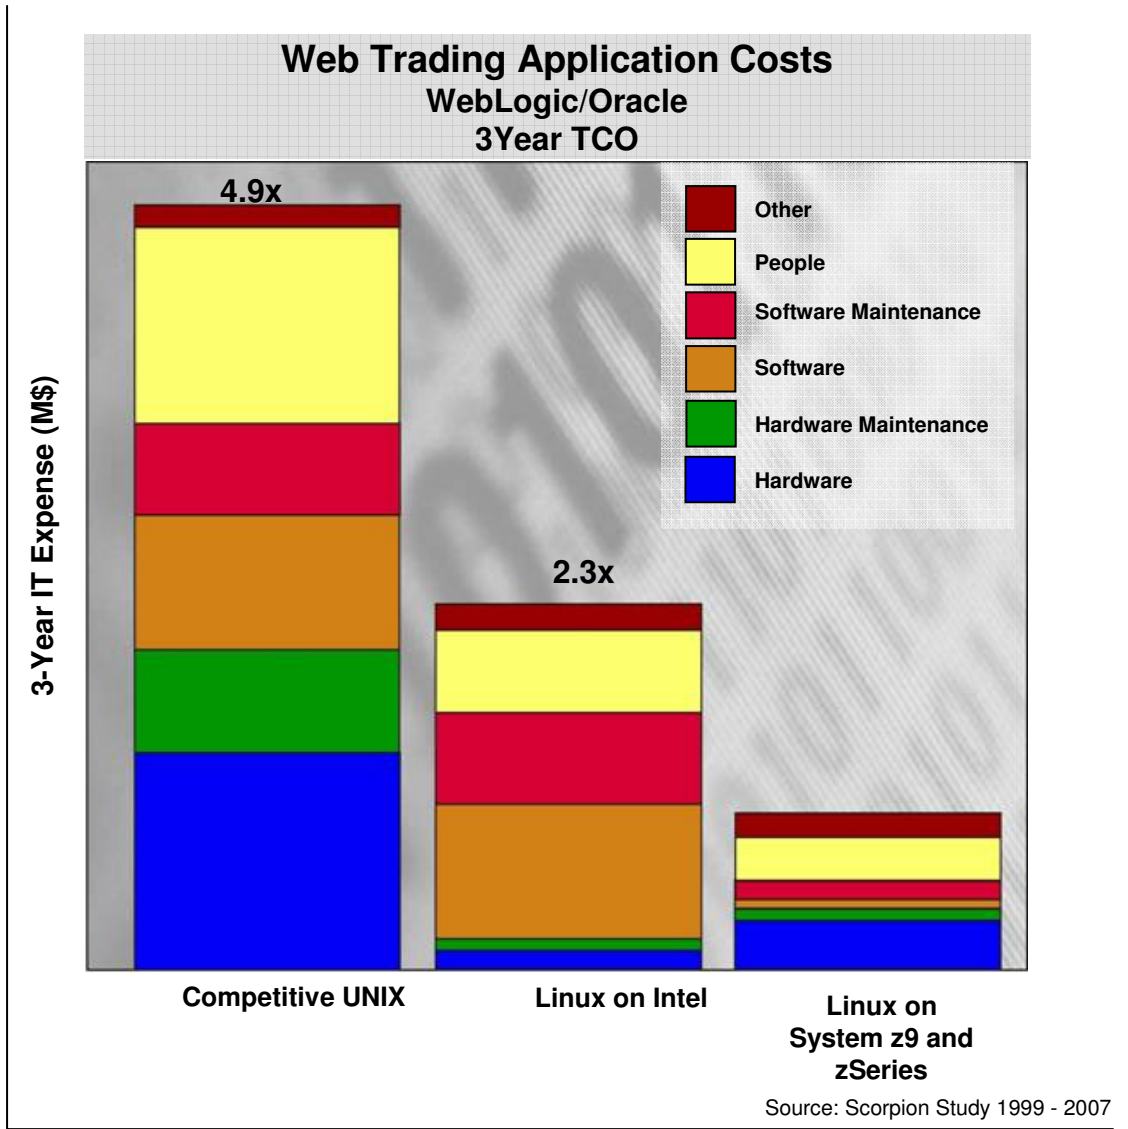

IBM TCO study

Total cost = **\$30,128,268**

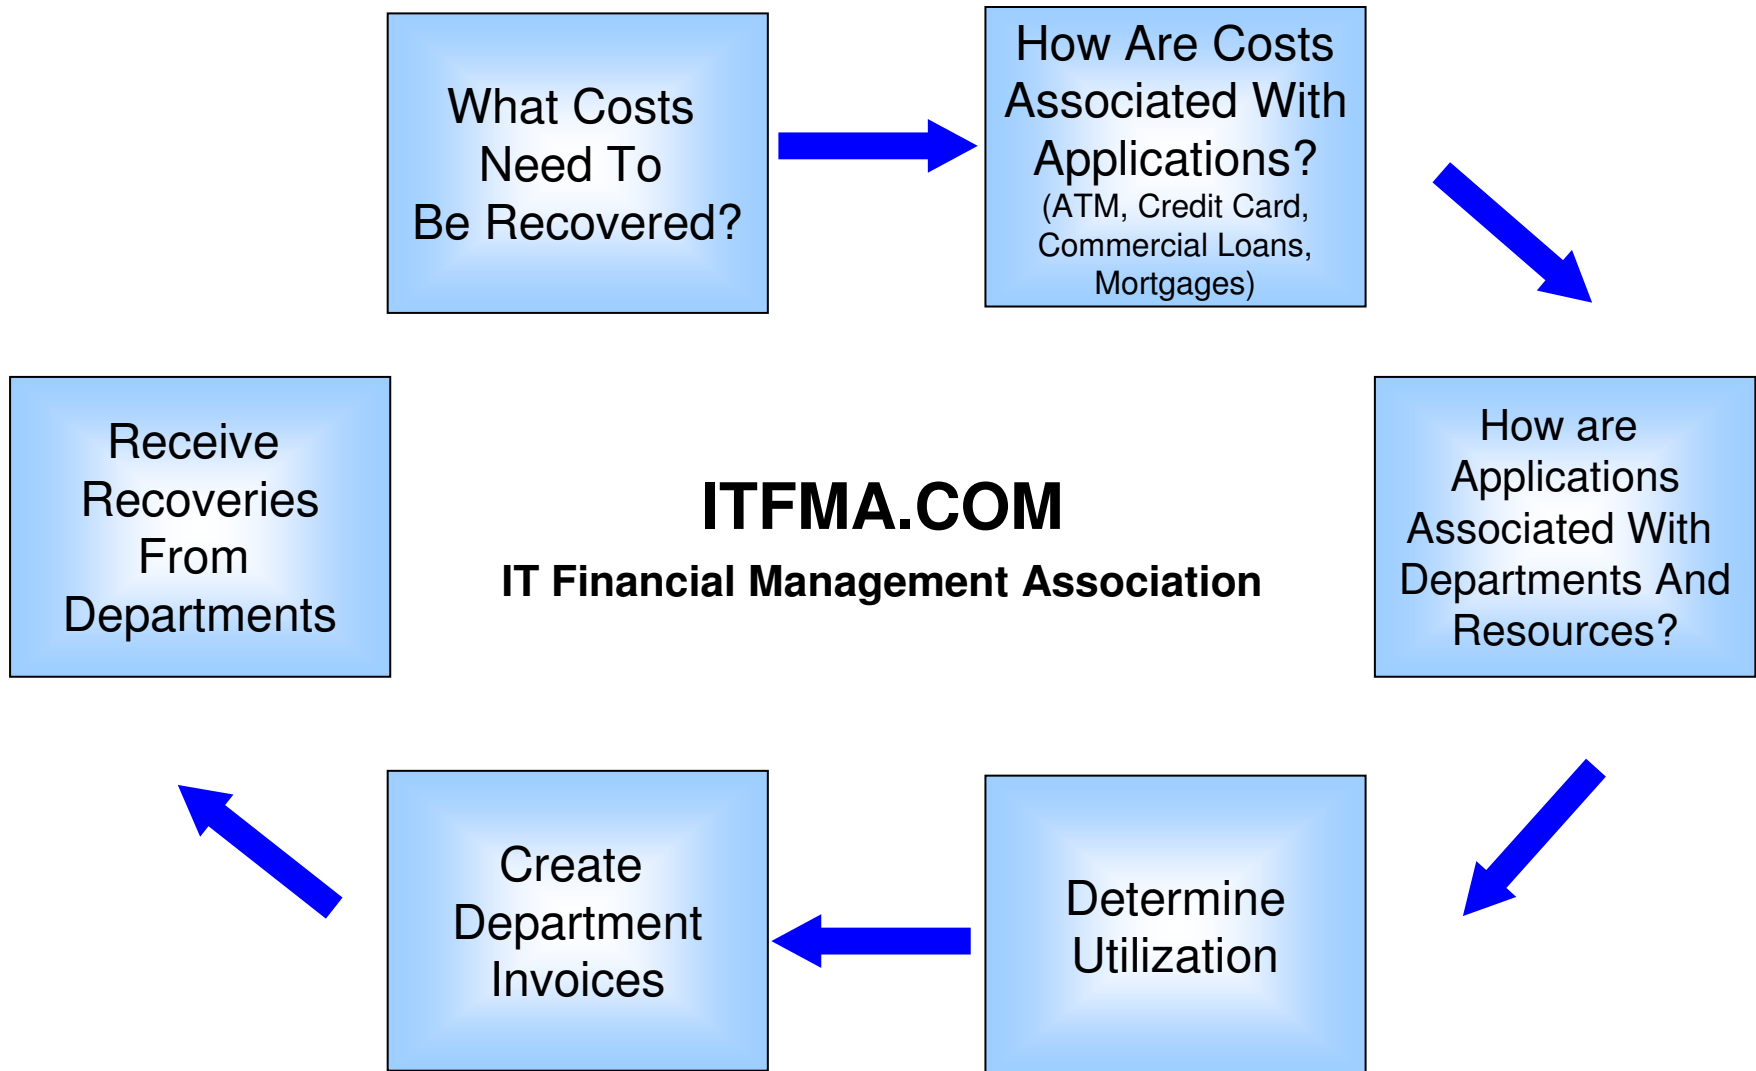

3.3 times as expensive

TCO Study - Impact of Linux on System z Consolidations

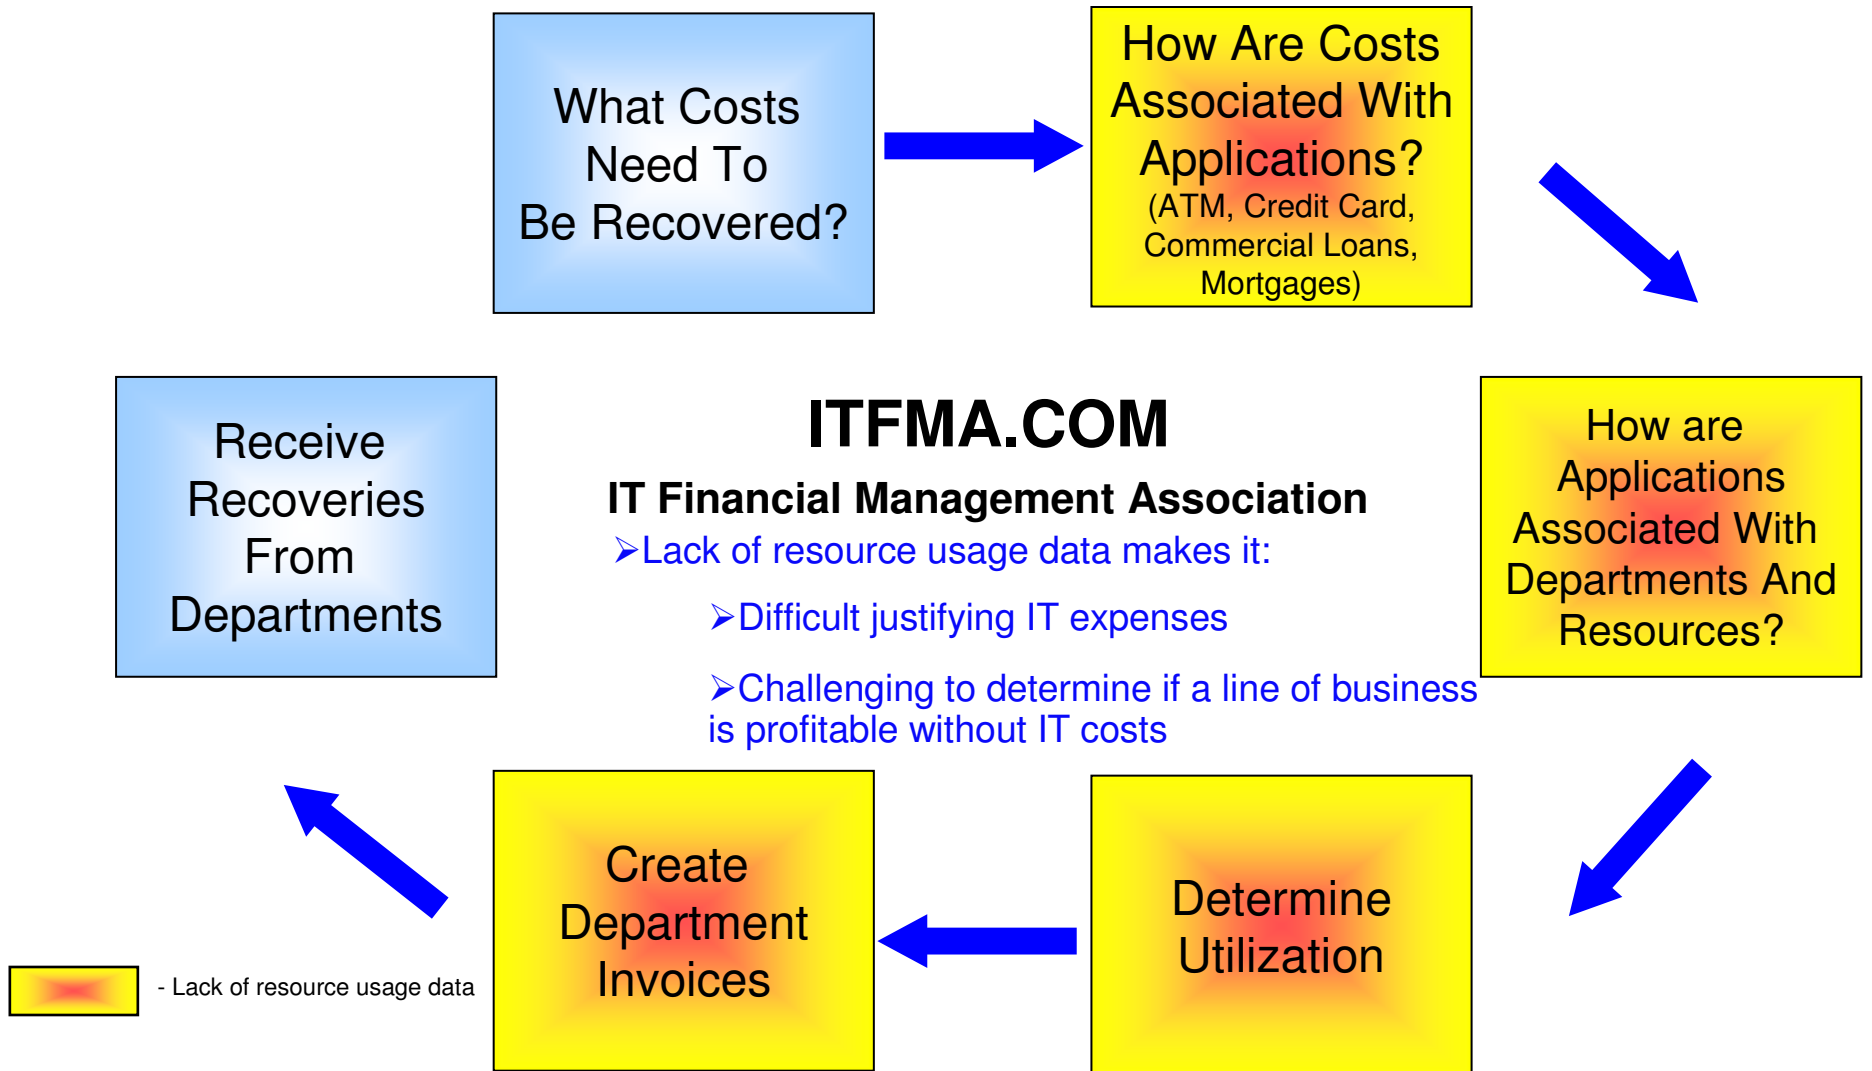

Workload consolidation using Linux on a System z can result in significant TCO savings

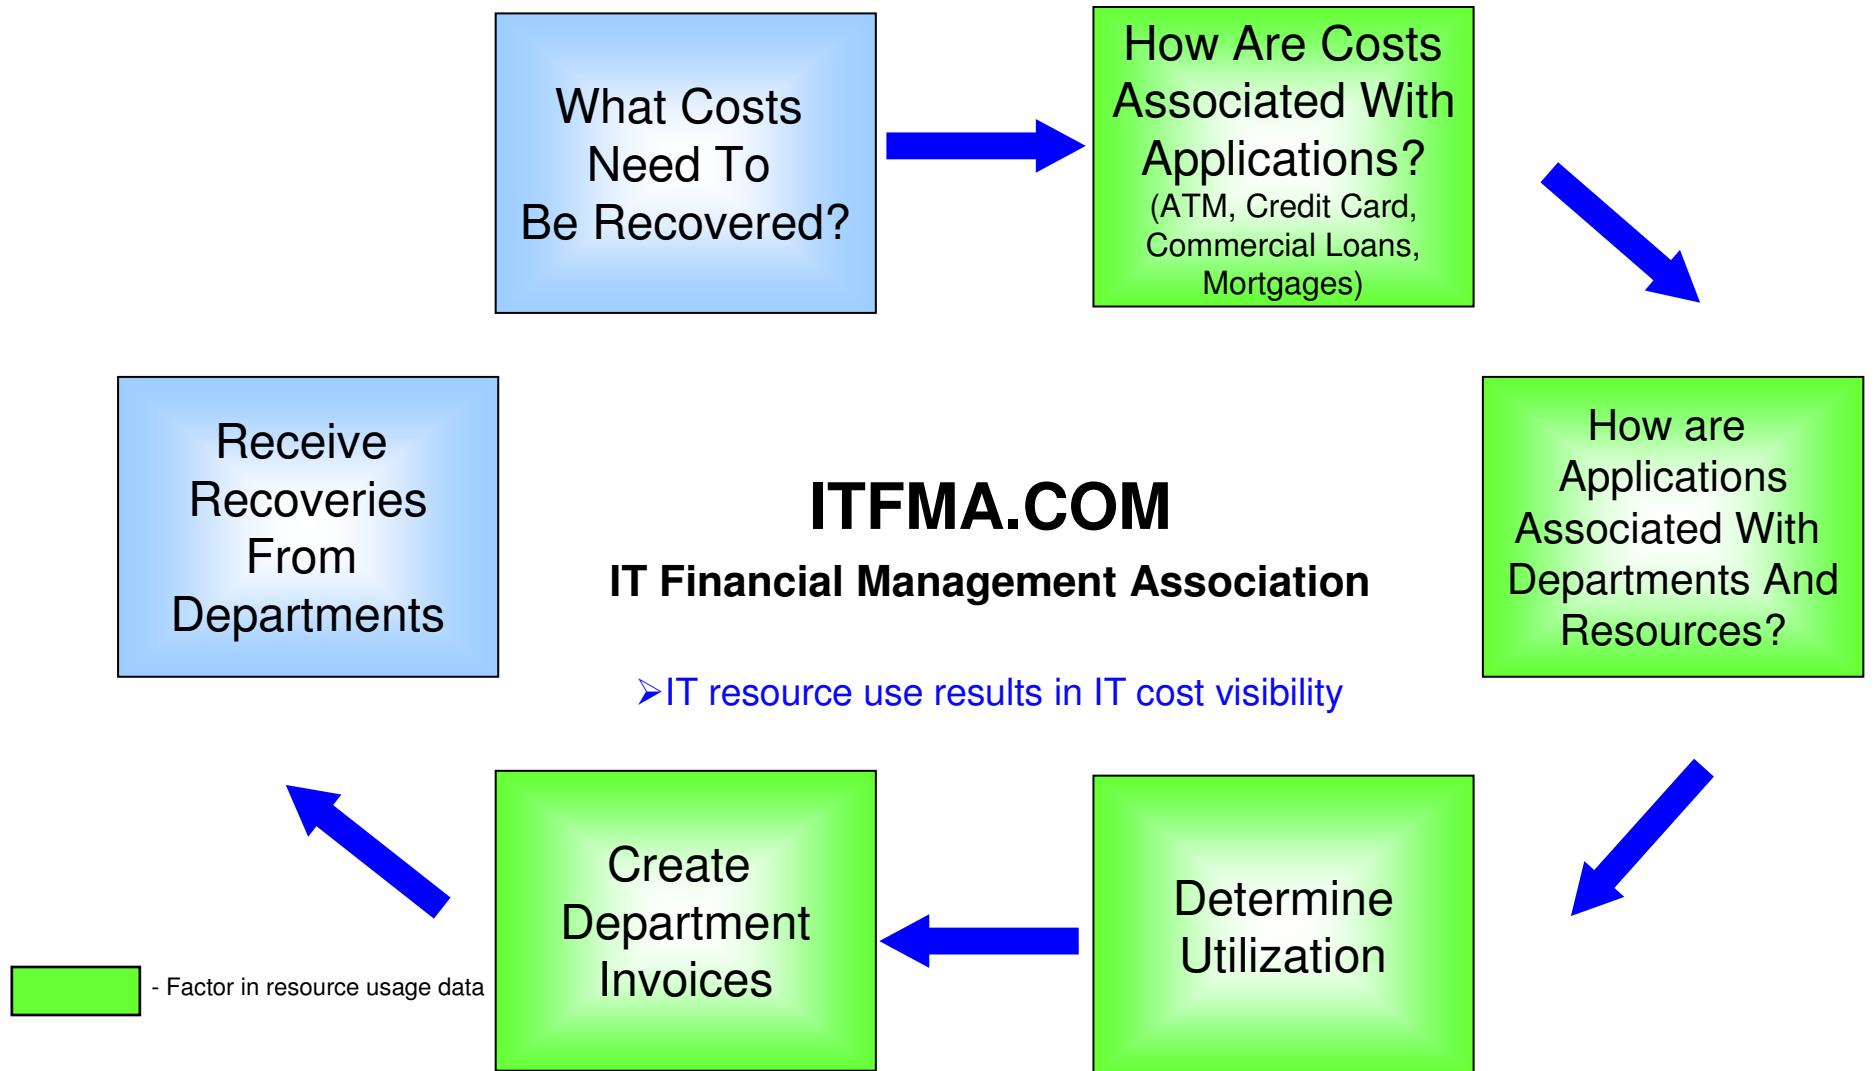

Data Center Cost Recovery Model

Failure to Accurately Allocate Distributed Costs can Lead to False Economics

Data Center Cost Recovery Using True Economics

Tivoli Usage and Accounting Manager

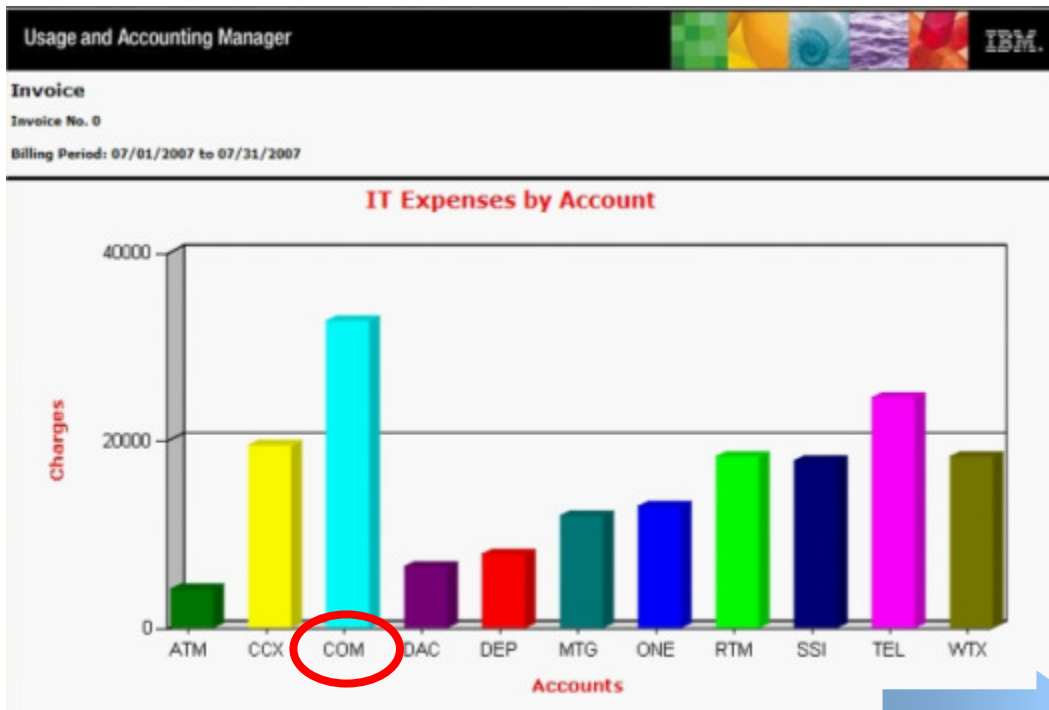

Resource Accounting and Chargeback

Tivoli Usage and Accounting Manager provides a comprehensive view of IT consumer costs. It shows who is utilizing shared resources, what resources exactly and how much of these resources they are using. It also provides a means to do chargeback based on this usage.

Highlights

- ✓ Aligns IT spending with business objectives
- ✓ Provide visibility of IT Costs to determine line of business, product and service profitability
- ✓ Helps organizations reduce IT infrastructure costs by showing accurate System z vs. distributed costs
- ✓ Integrates with **IBM Tivoli Decision Support for z/OS** to collect System z resource usage data

Get Financial Control with Tivoli Usage and Accounting Manager

IBM Tivoli

**Usage & Accounting Manager
Decision Support for z/OS**

Enabling IT operations to establish appropriate allocation methodologies to measure and manage IT cost and provide granular reporting and invoicing capabilities

Usage and Accounting Manager

Application View

Resource Group	Platform	Charges
COM Database		
COM Database	Mainframe	3,639.90
COM Database	Unix	1,395.66
COM Database	Windows	3,271.03
COM Database		8,306.59

COM Database	Unix roxie	0.00
COM Database Unix		1,395.66

- View costs by line of business, product, application or service
- Drill-down to view mainframe and distributed resource usage and costs

IT Cost Accounting Assessment

- **No charge one day event**
- **Objective is to establish a solution for :**
 - Improved IT cost transparency and communication of business contribution
 - Enhanced IT cost efficiency
- **Participants with your sponsorship**
 - Customer:
 - IT finance
 - IT data center management - both distributed and system z
 - Optionally, lines-of-business representatives
 - IBM financial management specialist
- **Follow with a formal recommendation document**

WebSphere Business Case for Large U.S. Insurance Company

3 Year Cost of Ownership

IBM eServer™ zSeries® w/ zAAPs savings 37% / 3 year TCO

Source: Scorpion Study 1999 - 2007

A Recent IBM TCO Study for a Client

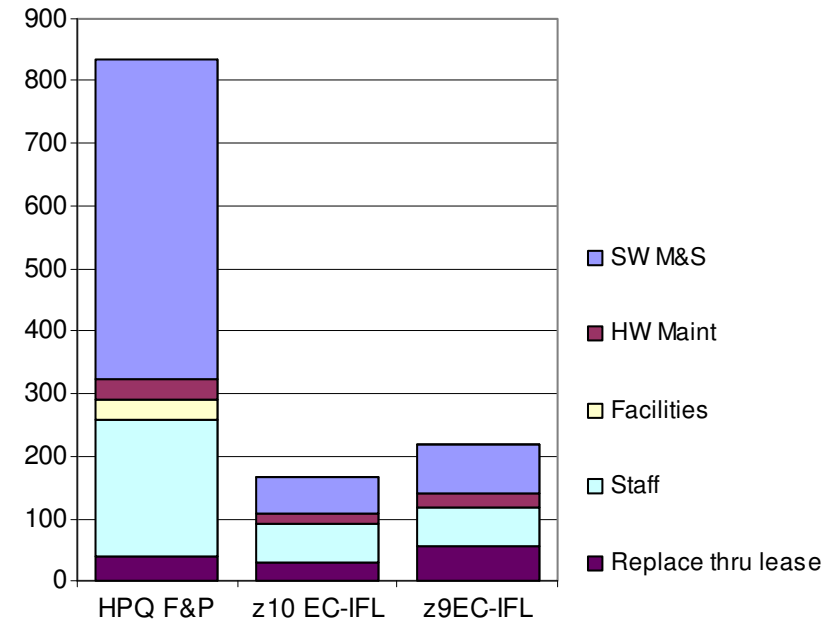

- Potential for dramatic reductions in software expense
- Reductions in power and cooling
 - No additional Energy Costs on z by activating 1 IFL
 - No additional floor space by activating 1 IFL
- Potential for dramatic improvement in service and disaster recovery
- Increased processor utilization
- A true “utility” solution

Insurance Company IT Costs

File & Print Servers

5-Year Total IT Cost Analysis

\$600-700K Savings

...and the savings will improve over time with z.
