

# Enterprise Business Analytics

## Delivering Business Information for Optimized Performance

**Dave Jeffries**

**Director, Business Analytics on System z**

## Analytics for zEnterprise - Significant and Game Changing

Savings over 5yrs in **CPU** 87%  
in **Servers** 96%

30 – 45% **Performance Improvement** with zEC12 over z196

Meet SLAs & score **3000-5000+** transactions in **Real-time**

Run at **90%+** capacity without impacting **SLA**

80% **Less Capacity** needed for **Data Warehousing**

BA System Admin savings alone, **pays for the investment** in 5 Yrs

95% **Savings** in host disk space for historical data

Runs complex queries up to **2000x Faster**

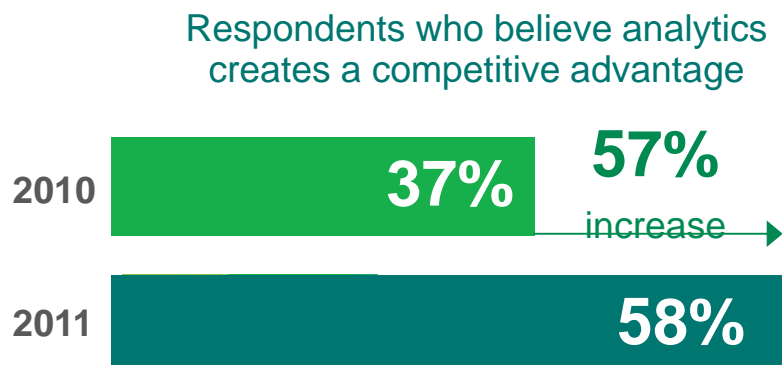

## Our Agenda for Understanding How..

- **The Changing Analytics Landscape**
- **New Requirements for Success**
- **Evaluate the Common Strategy for Analytics**
- **Next Generation Analytics with zEnterprise**
  - Why zEnterprise for Analytics
  - What Analytics for zEnterprise
- **What Customers are Saying**

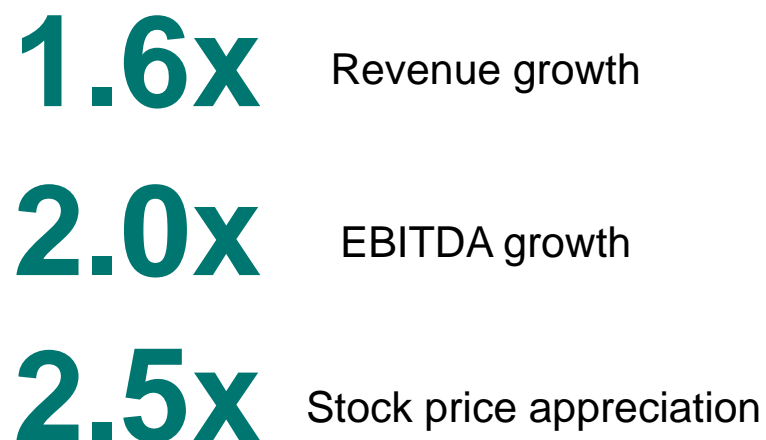

## Analytics have Evolved from a Business Initiative to a Business Imperative

More organization are using analytics to create a competitive advantage

Source: The New Intelligent Enterprise, a joint MIT Sloan Management Review and IBM Institute of Business Value analytics research partnership. Copyright © Massachusetts Institute of Technology 2011

And leaders are outperforming their competitors in key financial measures

Source: *Outperforming in a data-rich, hyper-connected world*, IBM Center for Applied Insights study conducted in cooperation with the Economist Intelligence Unit and the IBM Institute of Business Value. 2012

## ...focusing on high-value initiatives in core BUSINESS AREAS

### Examples

1

Customers

- Advanced client segmentation
- Leveraging customer sentiment analysis
- Reducing customer churn

2

Finance

- Enabling continuous planning and forecasting
- Automating financial and management reporting
- Improving visibility, insight and control

3

Risk

- Making risk-aware decisions
- Managing financial and operational risks
- Reducing the cost of compliance

4

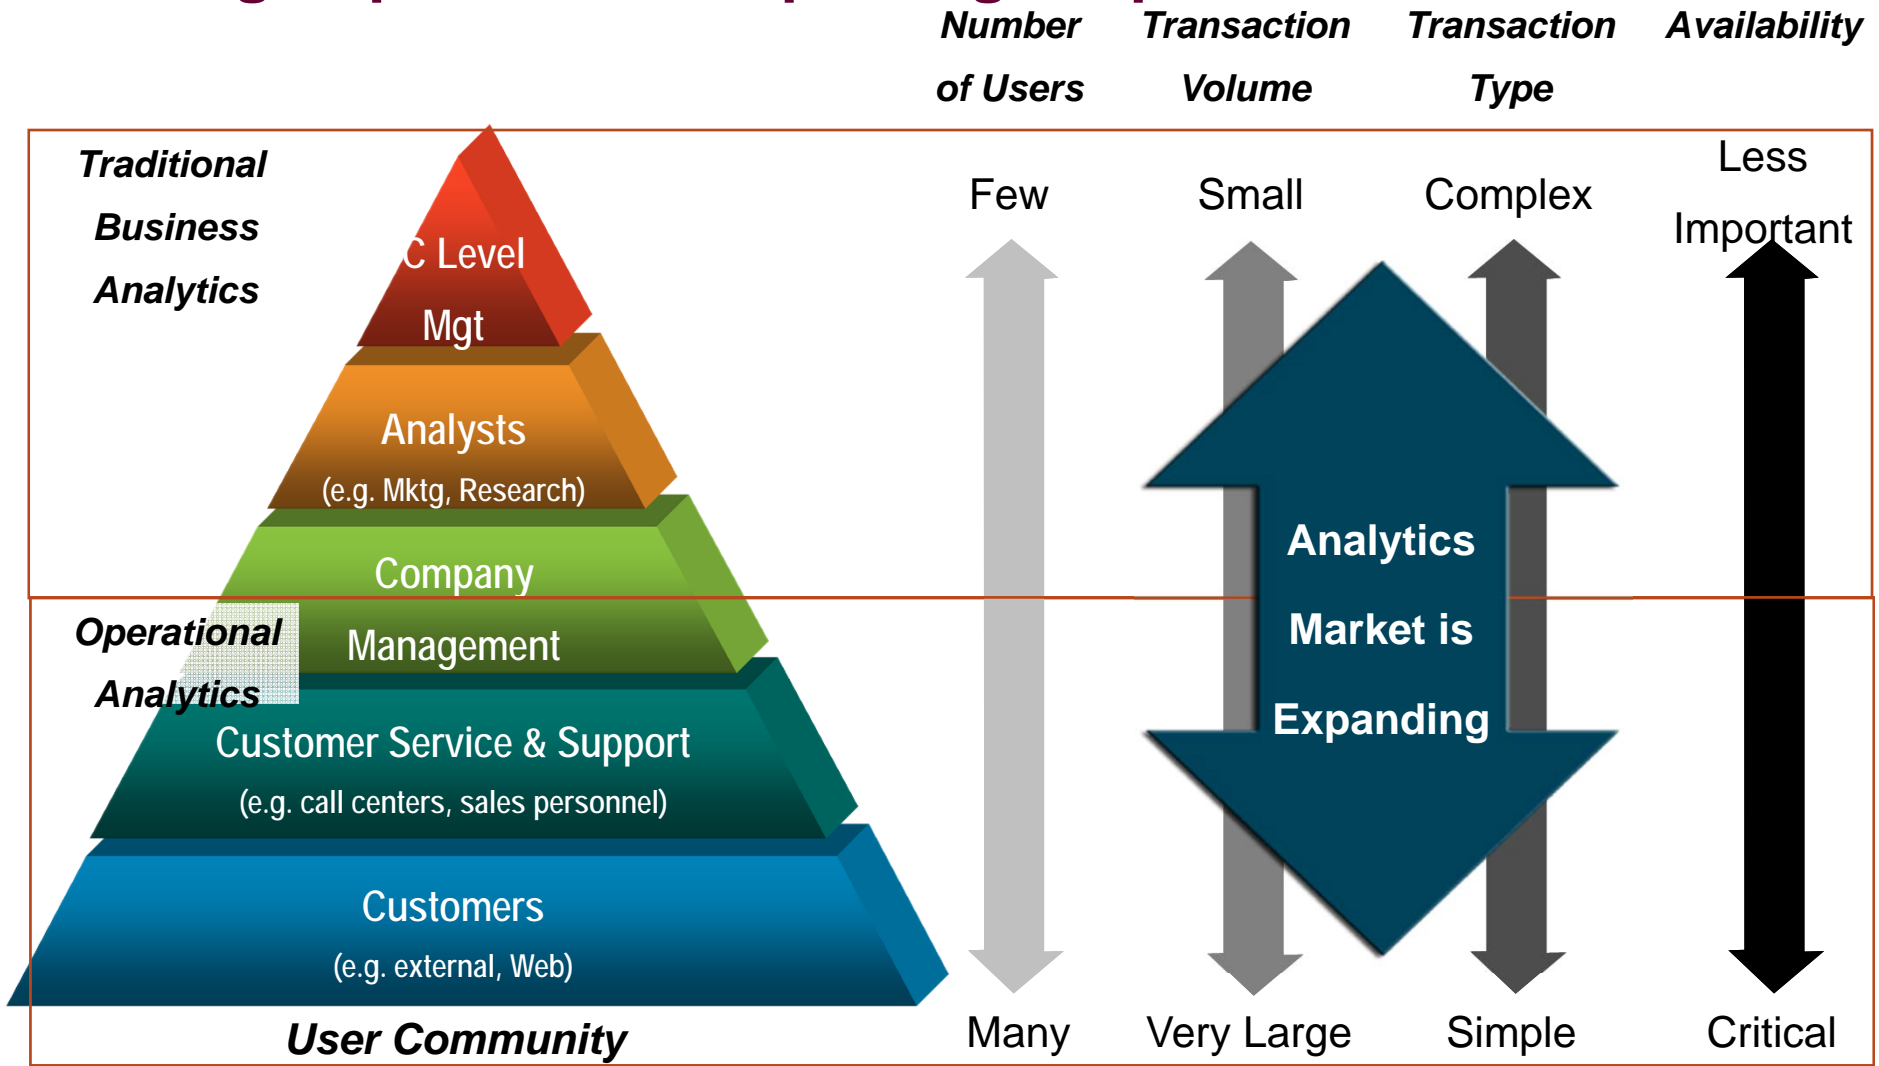

Operations

- Optimizing the supply chain
- Deploying predictive maintenance capabilities
- Transform threat & fraud identification processes

# Shifting Expectations Impacting Requirements

## Proven Business Value Driving Change

	1997	2012	Adapting Infrastructure Strategy to Ensure Success
<b>eMail</b> 	<ul style="list-style-type: none"> <li>▪ Telephone primary communication tool</li> <li>▪ Outages expected</li> <li>▪ Staff centrally located</li> <li>▪ No governance</li> </ul>	<ul style="list-style-type: none"> <li>▪ Mission critical</li> <li>▪ High Volume</li> <li>▪ Near real-time</li> <li>▪ Corporate regulatory compliance</li> <li>▪ Global</li> </ul>	<ul style="list-style-type: none"> <li>▪ Archiving</li> <li>▪ High Availability</li> <li>▪ Reporting</li> <li>▪ Mass storage</li> </ul>
<b>Instant Messaging</b> 	<ul style="list-style-type: none"> <li>▪ Desktop application</li> <li>▪ No governance</li> <li>▪ Text based</li> </ul>	<ul style="list-style-type: none"> <li>▪ Server based</li> <li>▪ Video sharing</li> <li>▪ Telephony integration</li> </ul>	<ul style="list-style-type: none"> <li>▪ Enterprise model</li> <li>▪ Availability</li> <li>▪ Governance</li> <li>▪ Bandwidth</li> </ul>
<b>Business Analytics &amp; Data Warehousing</b> 	<ul style="list-style-type: none"> <li>▪ Departmentally defined</li> <li>▪ Ad hoc Query</li> <li>▪ Capability based products</li> <li>▪ Desktop application</li> <li>▪ IT not involved</li> </ul>	<ul style="list-style-type: none"> <li>▪ More volume, real-time</li> <li>▪ More types of users, and mobile devices</li> <li>▪ Corporate regulatory compliance</li> <li>▪ Environmental concerns</li> </ul>	<ul style="list-style-type: none"> <li>▪ Enterprise BA: Standardization / Consolidation</li> <li>▪ Modernization</li> <li>▪ Data Governance</li> <li>▪ Cloud Computing</li> <li>▪ Big Data</li> </ul>

## The Solution Debate: 'Freedom' vs. 'Control'

**Business Users Want  
Ease of Use,  
Flexibility**

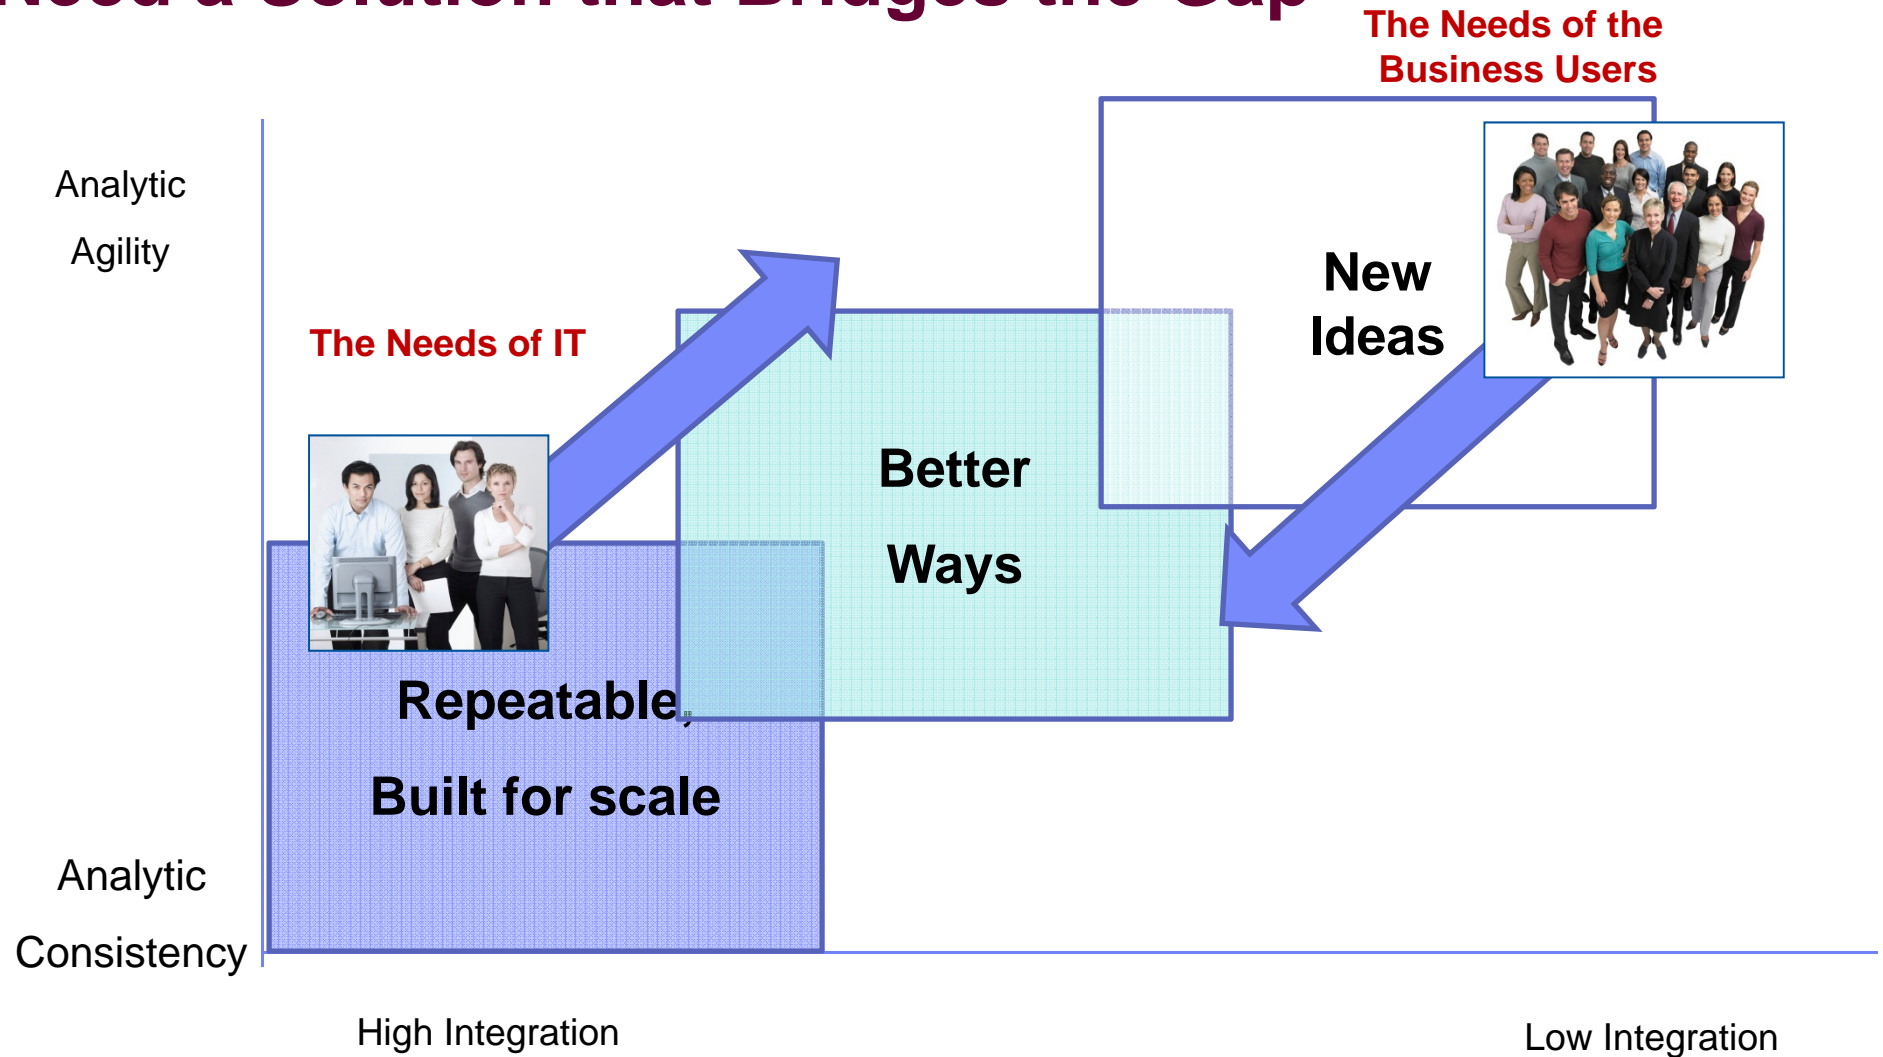

**IT Wants  
Functionality,  
Standards**

# Need a Solution that Bridges the Gap

## Data must be brought back under control in order to meet their key analytics objectives

*What are the 3 largest problems with your firm's BI/analytics?*

*Please rate the importance of the following with regard to your informational needs*

57%

Our data is **scattered** in too many places (top response)

89%

Above all else, our data must be **secure** (tied for top response)

89%

When we access data it should appear as a **single source** of the truth (tied for top response)

## Solution must Address Analytics Priorities

Select the top 3 improvements you would make to your current business intelligence and analytics strategy in order of importance. (Select up to three)

# Executives recognize that the historic multi-platform approach towards analytics is an impediment to moving forward

Please evaluate each of the following statements with regard to your analytics platform:

We are looking to cloud as a way to provide greater agility in meeting analytic requirements

Having different technical environments for transactional systems and analytic systems increases cost

Data sharing across platform silos makes it difficult to get an enterprise view

Data sharing across platform silos is excessively expensive

5 = Strongly Agree      4 = Agree

# The Common Approach to Analytics

# A Look at the Core Elements for an Analytics Solution

## Customer Interaction

### Data In

#### Transactional Data:

- DB2 for z/OS
- IMS
- VSAM
- Non-IBM

### Data Movement & Cleansing

#### ETL:

- Integrate, cleanse, transform, & load production data to Data Warehousing solution

### Data Warehousing

- Data Warehouse
- Operational Data Store
- Data Mart

### Data Analysis

#### Business Analytics:

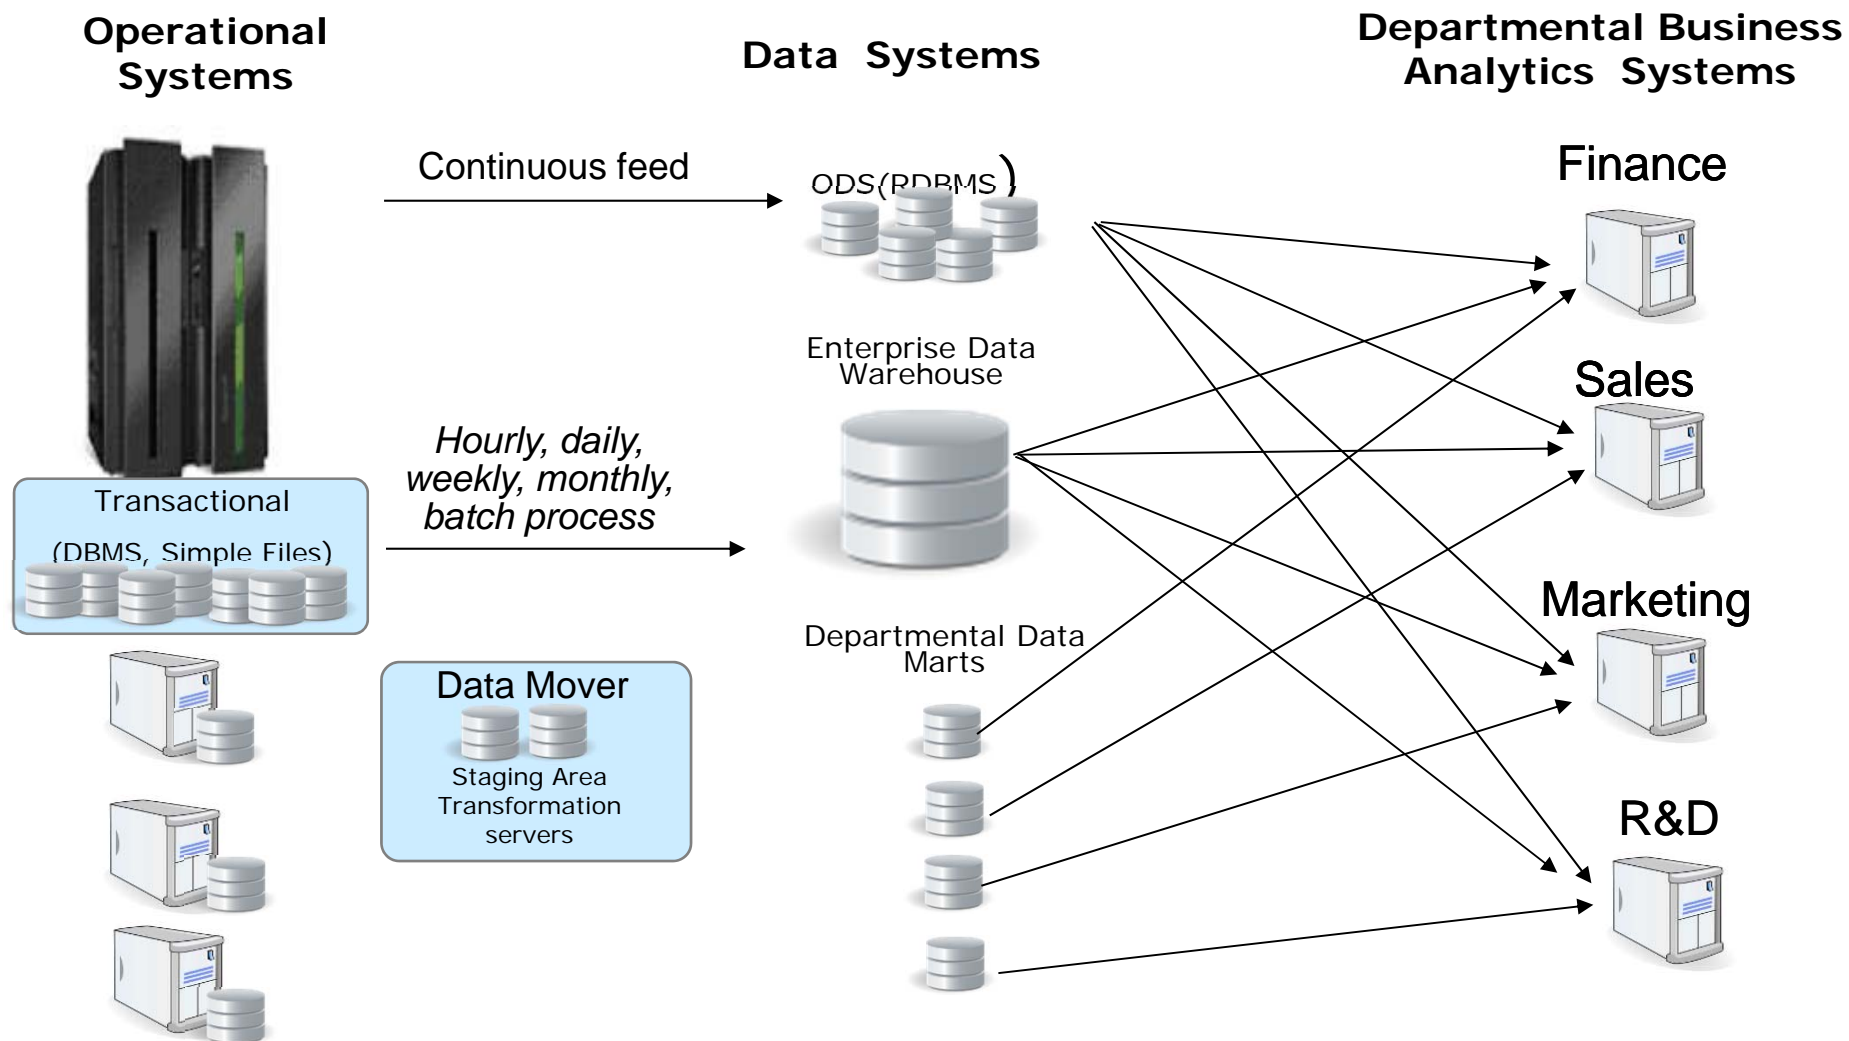

- Business Intelligence
- Predictive Analytics

## Analytics Out

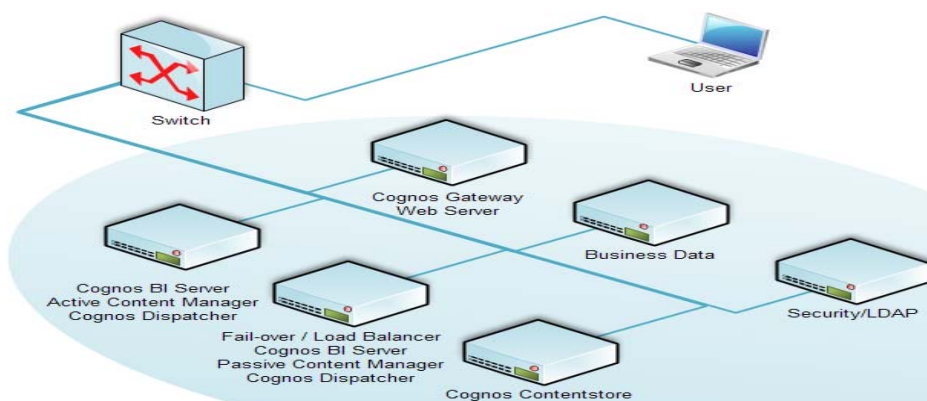

# A Look at an Analytics Architecture across the Enterprise Today

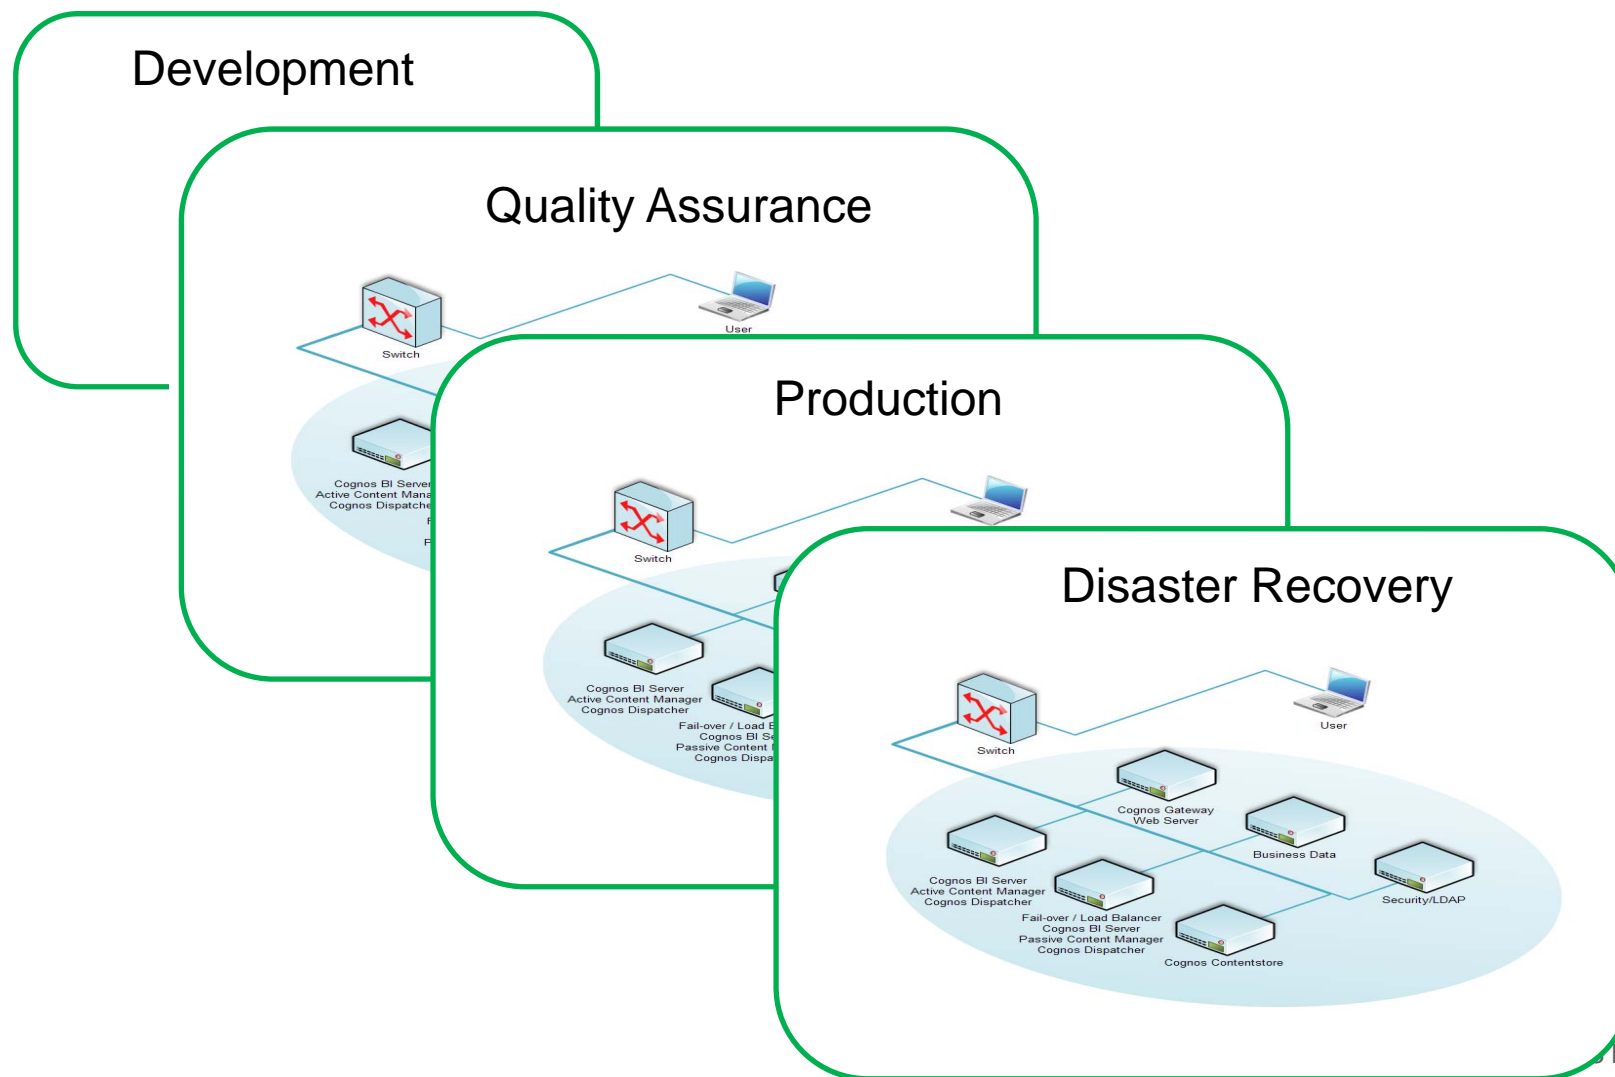

## Break that Down to the Individual Application Level

50 Concurrent Users

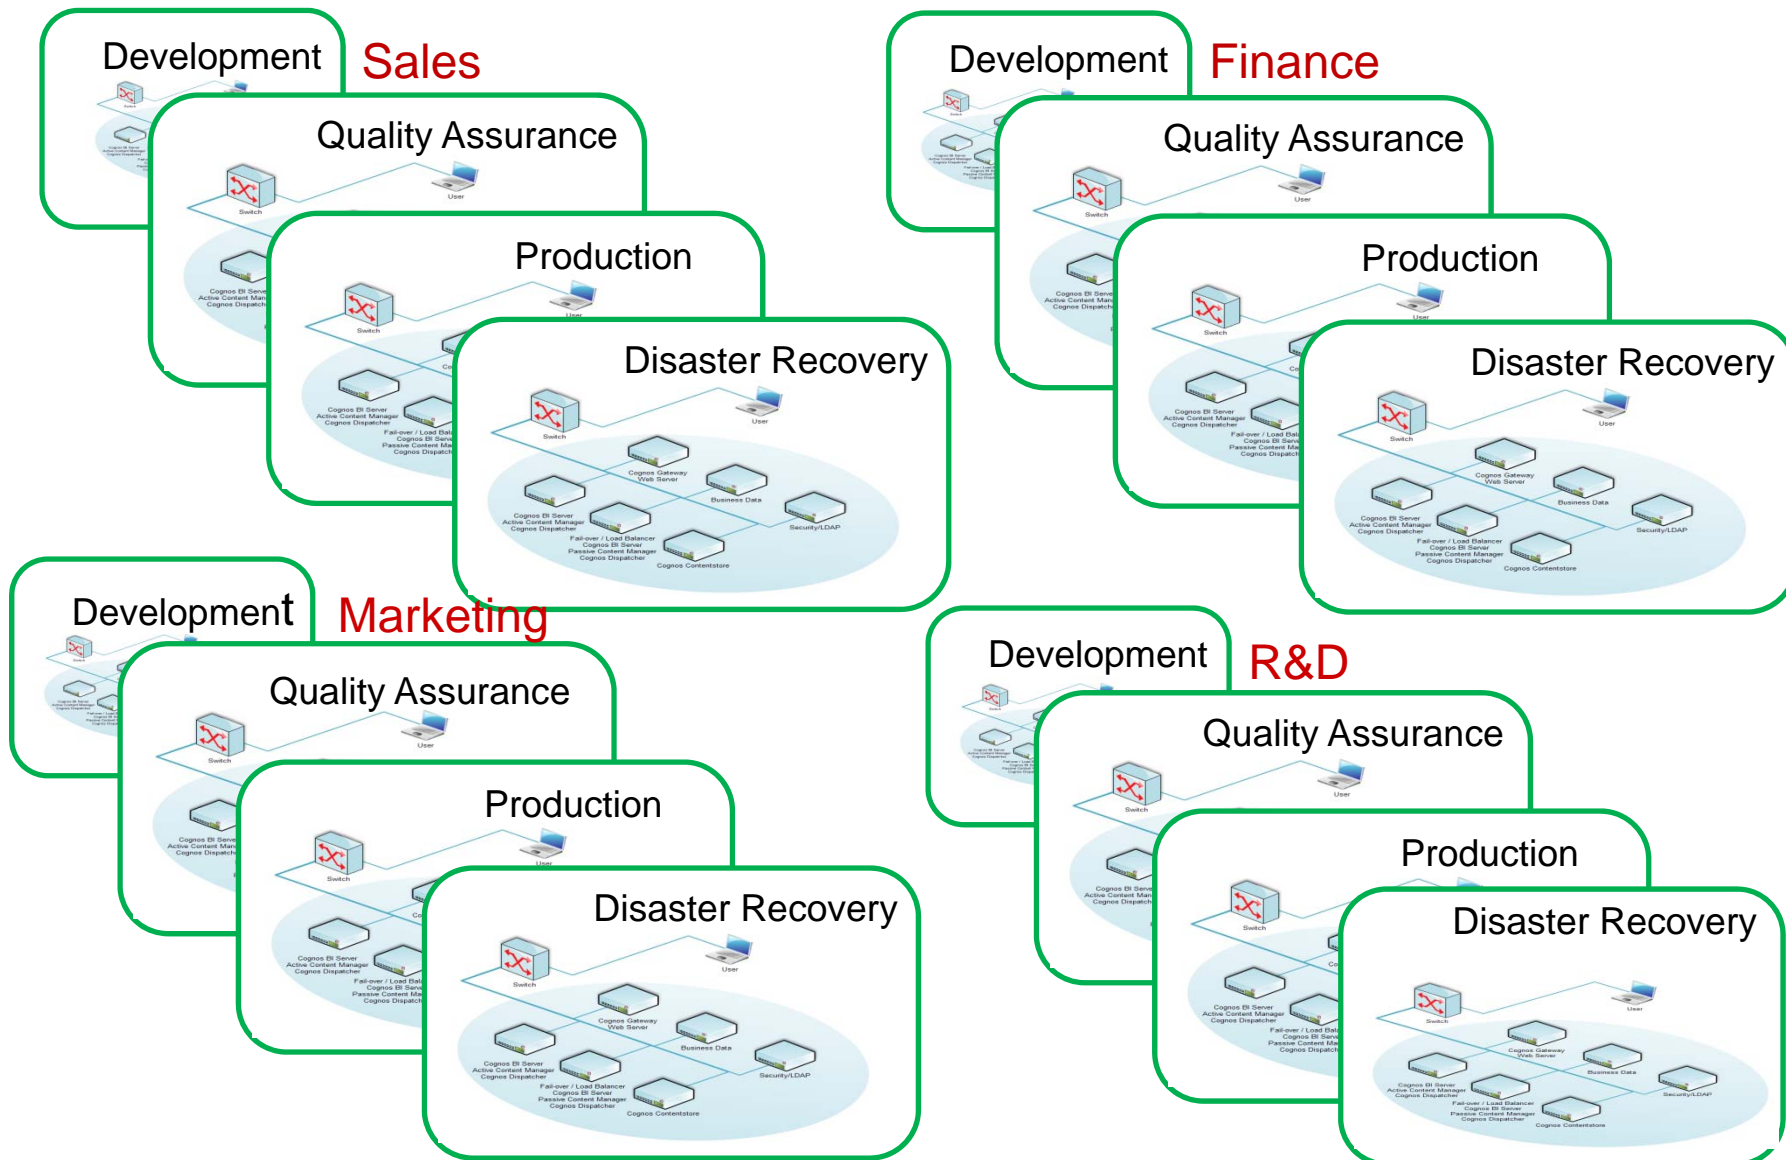

This architecture uses the loadbalancing and failover features that are built into the Cognos BI software architecture.

# Multiply that Across each Environment

# Multiply that Across each Department

# Potential Issues Which May Limit Analytics ROI

Growth = re-engineering

Each depart. needs to finance & acquire the HW, SW admin, facilities, training & support to meet demand

Insufficient processing power to support large or complex queries

Duplicate environments needed for development, test, production, high availability are multiplied over applications and lines of business

Servers are run at sub-capacity

Data transfer is limited to off peak times

Complexity of multiple infrastructures is impacting effectiveness of DR, admin., audit ability, compliance, etc.,

Multiple copies of the data are being created

Inconsistency of security controls across duplicated data

# IBM zEnterprise Information Hub

End-to-end, integrated foundation for modern analytics

## Bring your analytics to your data:

- 70% of the data used for analytics originates on zEnterprise

## Easily delivers on modern analytics requirements for:

- Timely, accurate and secure
- Superior availability, scalability and performance
- Rapid deployment and expansion
- Reduced cost and complexity

## Evolves with your business:

- Start where you want and grow without re-architecting

## What Sets zEnterprise Apart for Analytics?

- A large % of the data that is accessed for analytics resides or originates on IBM zEnterprise
  - 2/3 of business transactions for U.S. retail banks
- 80% of world' s corporate data
- Businesses that run on zEnterprise
  - 25 of the top 25 worldwide banks
  - 23 of the top 25 U.S. retailers
  - 9 of the top 10 global life/health insurance providers
  - 64% of Fortune 500
  - 45% of Fortune 1000
  - 71% of Fortune Global 500
- The System z mainframe can run over a thousand virtual Linux images on a single frame the size of a refrigerator
- 1,300+ ISVs run zEnterprise today, with more than 275 of these selling over 800 applications on Linux
- The downtime of an application running on System z equates to approximately 5 minutes per year

# What Sets zEnterprise Apart for Analytics?

**zEnterprise: An end-to-end, integrated, rock-solid foundation for business analytics**

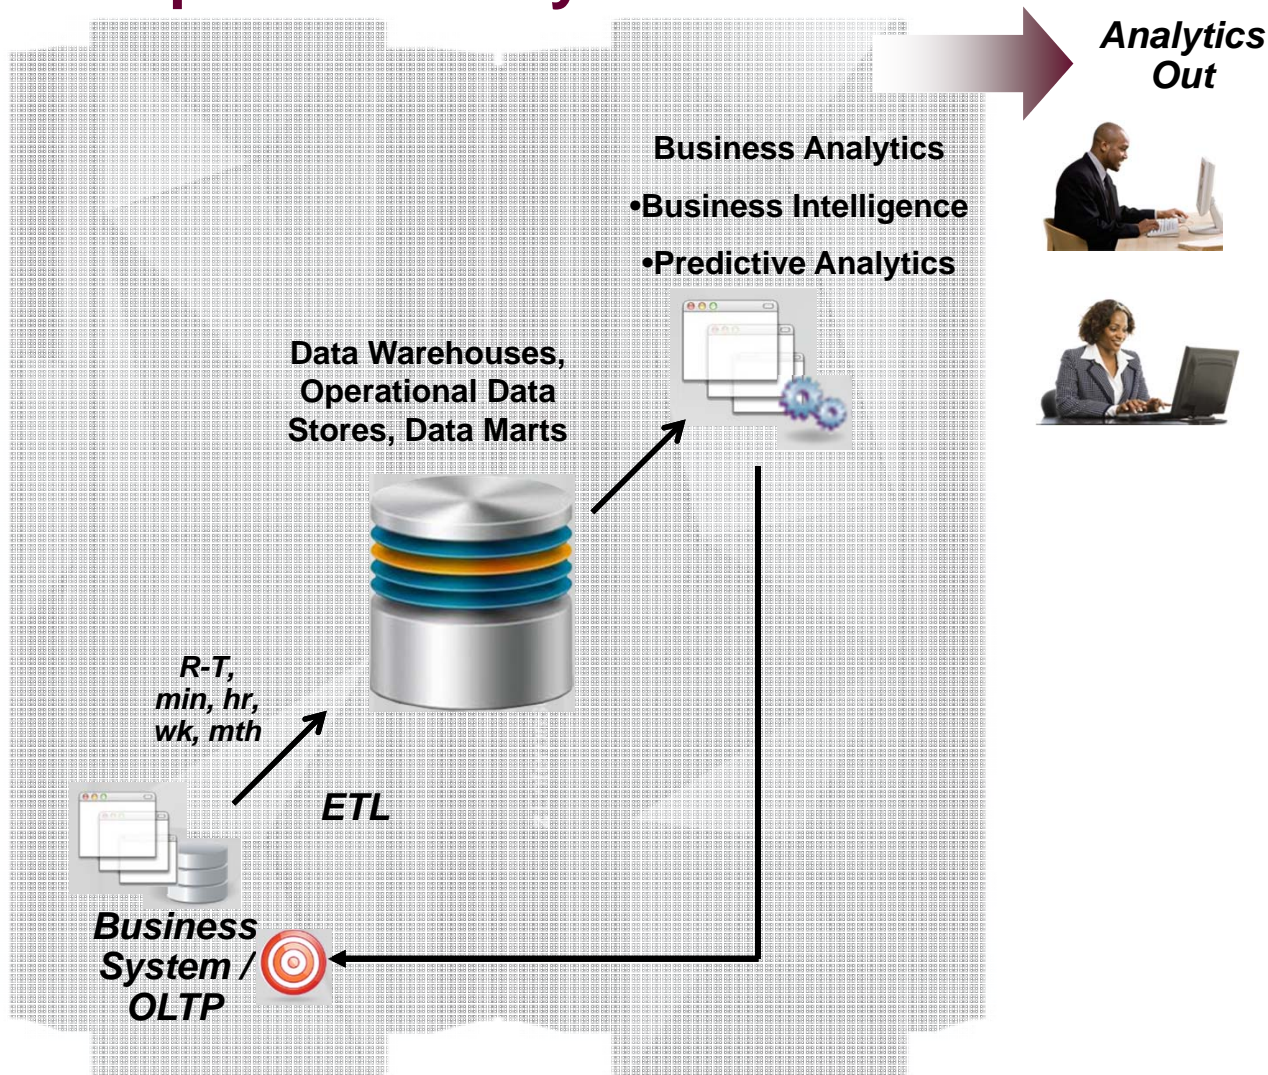

**Customer Interaction**

**Data In**

**Real-Time Score/ Decision Out**

## What Sets zEnterprise Apart for Analytics?

**zEnterprise: Makes the technical challenges the easy part!**

**Timely, accurate and secure information**

**Superior availability, scalability and performance**

- **Co-location** of data warehousing, business analytics, transactional data
- **Reduced data movement**
- **Lower latency and near real time data**
- **Rapid acceleration** of complex queries
- High **security** (EAL5+)
- High **availability** (99.999% )
- Performs at **100% capacity**
- **Prioritization** of critical queries & workloads
- Integrated **disaster recovery**
- **Processors, disk, memory added dynamically** without outage
- **Pre-install then activate** as needed
- **Flexible deployment options**
- **Centralized, scalable infrastructure**
- **Virtualization**
- Start with your **final architecture**

**Reduced costs and complexity**

**Rapid deployment and expansion**

# What Sets zEnterprise Apart for Analytics?

**zEnterprise: Start with your most critical business issue and quickly realize business value -- all with the flexibility to expand and grow without the need to re-architect**

# Predictive Analytics for Linux on zEnterprise

<p><b>IBM SPSS Statistics for Linux on System z</b></p> <ul style="list-style-type: none"> <li>Apply math to decision making and research for commercial, government, and academic users</li> </ul>	<p><b>IBM SPSS Modeler for Linux on System z</b></p> <ul style="list-style-type: none"> <li>Data mining tool used for generating hypotheses and scoring</li> <li>Text analysis for unstructured data to model consumer behavior</li> <li><b>In-Transaction Scoring with DB2 z/OS: Embeds the Scoring Algorithm Directly within the Transactional Application</b></li> </ul>
<p><b>SPSS Decision Management for Linux on System z</b></p> <ul style="list-style-type: none"> <li>Employs both predictive models and business rules to automatically generate recommended actions</li> </ul>	<p><b>SPSS Collaboration and Deployment Services for Linux on System z</b></p> <ul style="list-style-type: none"> <li>Provides role-based models and security for in scoring, job scheduling, repository services, and integration</li> </ul>

## Collaboration and Deployment Services

## Real time scoring on the zEnterprise platform...

- Helps **improve the success rate of up sell / cross sell opportunities, fraud detection customer service** by using the most current transactional data to gain a more accurate view of the “next best action” to take.
- **Increases the speed and accuracy of scoring in real time** by imbedding the scoring algorithm in DB2 and running it directly within the transactional application resulting in:
  - **Reduced costs and complexity associated with network traffic** by bringing the analytics to the data on zEnterprise
  - Ability to **meet and exceed SLAs** associated with delivery of real time analytics by offering the **same service level as the OLTP applications**

## Sample Real-time Scoring Use Cases

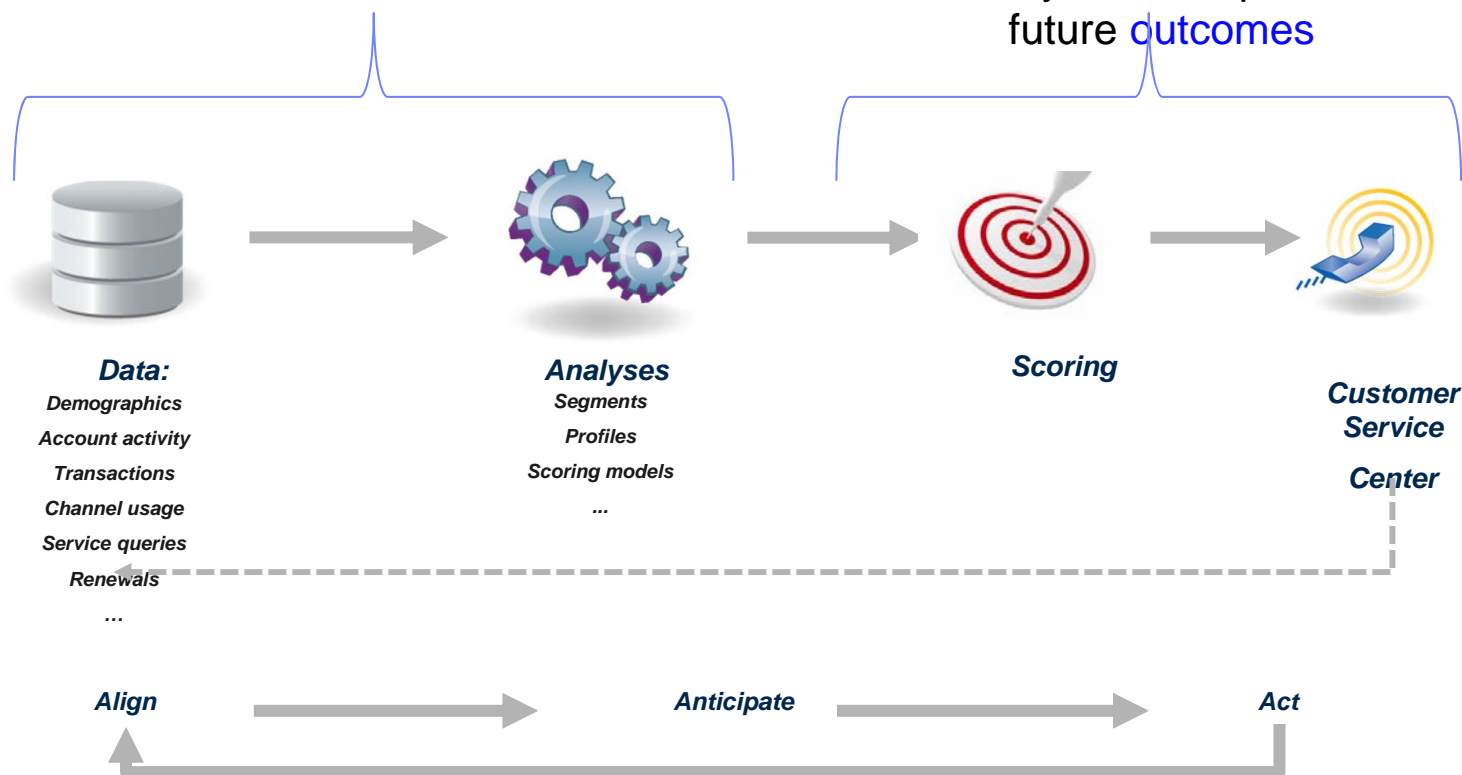

### By Industry

Healthcare	Reduce fraud and waste, assist with best course of treatment
Banking	Monitor credit card usage in real-time to proactively detect/prevent
Insurance	Score claims in real-time to immediately identify fraudulent claims and identify up-sell opportunities
Government	Combine the details of a current crimes in progress with lessons learnt from past crimes to determine the safest course of action for the officer
Retail	Combine today's purchase details, with current market information and historical purchase patterns to determine the best upsell opportunity when they are ready to spend money.
Telco	Combine today's complaint with the current account status and previous behavior to determine best upsell

# The “how” of Predictive Scoring

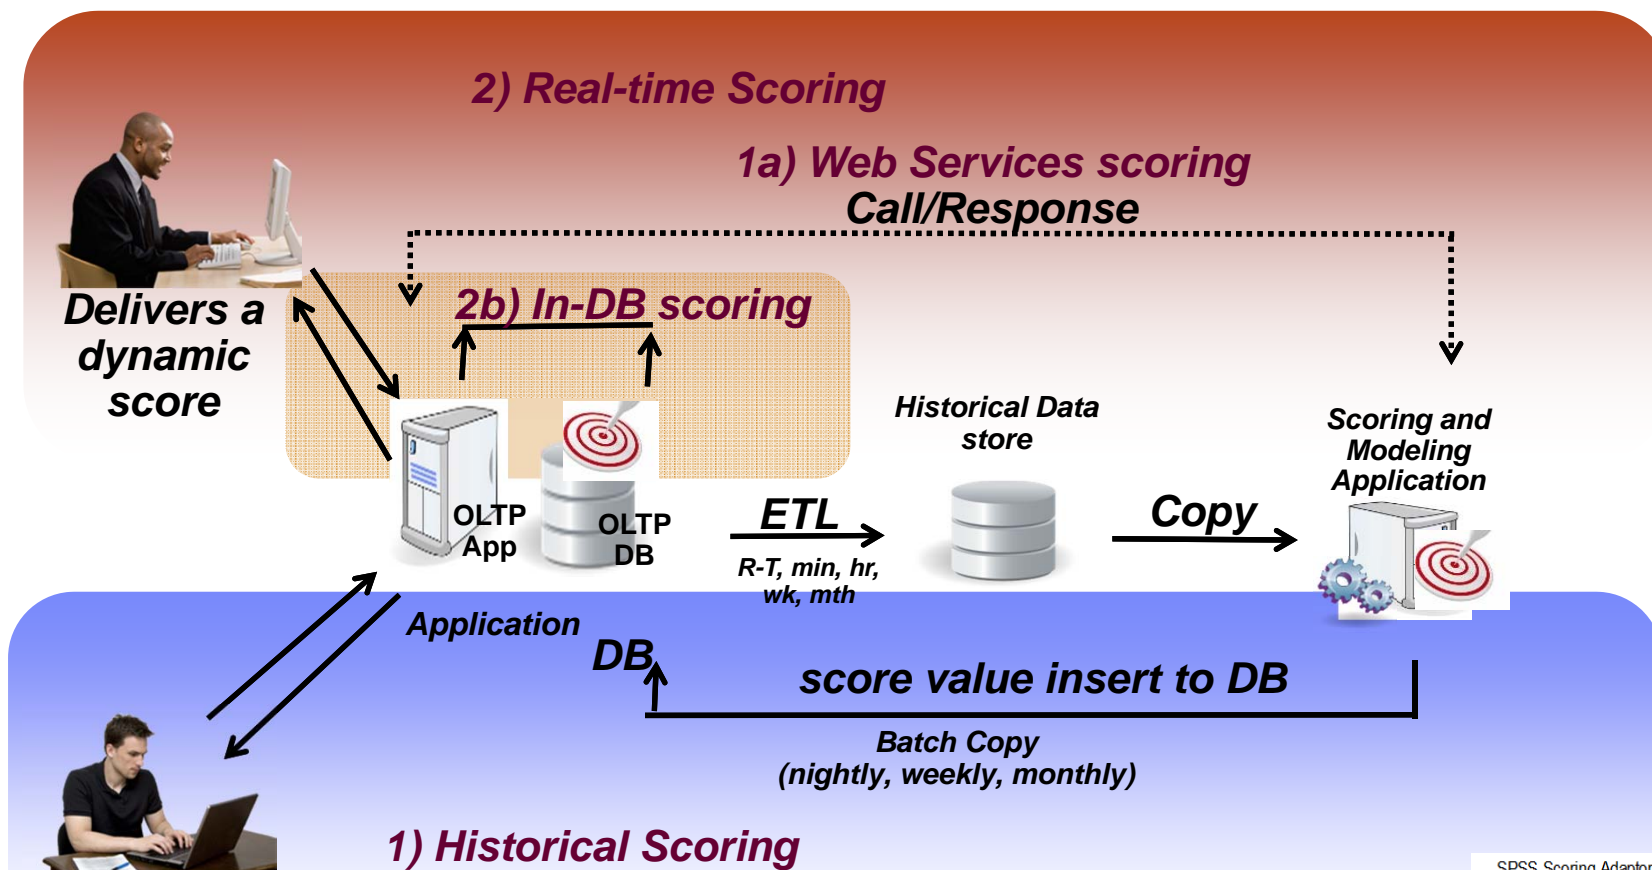

Identify predictive models/patterns found in historical data

Use those predictive models with variables to score transactions & identify the best possible future **outcomes**

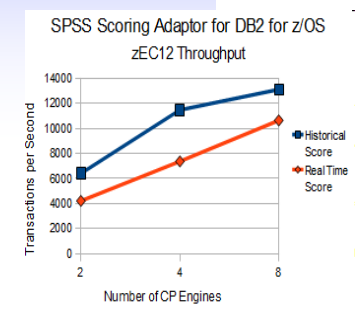

# Scoring Options with an OLTP Application

- ✓ **Meets most demanding workload**
  - 3K to 5K transactions per second requested

## **DB2 10 for z/OS**

*A highly tuned database for OLTP & Analytics*

- CPU reductions for transactions, queries, and batch
- Scales with less complexity and cost
- Improved operational efficiencies and lower administration cost
- Even better performance

➤ ***64 bit Evolution  
Virtual Storage  
Relief***

➤ ***Temporal Data***

➤ ***Integrated XML  
Support***

➤ ***Query Processing  
Enhancements***

➤ ***Business Security  
& Compliance***

➤ ***Better  
Productivity***

## IBM DB2 Analytics Accelerator

*Blends zEnterprise and Netezza technologies to deliver, mixed workload performance for complex analytic needs*

### Fast

Complex queries run up to 2000x faster while retaining single record lookup speed

### Cost Saving

Eliminate costly query tuning while offloading complex query processing

### Appliance

No applications to change, just plug it in, load the data, and gain the value

## Reduces the Cost of High Speed Analytics

- Choice of historical data location – High Performance Storage Saver
- Real time analytics – Incremental Update
- Faster data refresh – Unload Lite
- New capacity – Full range of Netezza models supported
- New queries

# IBM zEnterprise Analytics System 9700/9710

*Mixed Workloads for Next Generation Business Analytics*

The next generation of System z analytics; an integrated solution of hardware, software and services that enables customers to rapidly deploy cost effective game changing analytics across their business.

## Preselected

All the necessary components are identified and integrated into an end-to-end solution

## Pretested

Over 20 different customer typical configurations are presized and tested

## Solution Priced

Aggressively priced for a cost-effective add-on or new deployment for customers with critical data operations

## zEnterprise for Analytics Makes a Difference to our Customers

“Unlike a distributed approach to analytics, with zEnterprise we can **easily bring new projects on board and scale up to meet the needs of more users**. So the **business gets excellent performance and near-total availability**, and can regard **analytics as an always-on, real-time service**.”

Larry Yarter,  
Chief Architect at IBM BACC

“In just two years, Blue Insight has grown to support nearly **200,000 users** and more than **390 different projects**. Drawing information from **over 250 sources**, generating more than **30,000 reports every day**.”

“So **instead of spending \$250,000** for each business unit ... we really deliver the analytics to that business unit at **around \$13,000 annually**, and they are boarded within minutes.”

James Correa, Senior Manager, IBM Business Analytics  
Competency Center (BACC)

“System z provides such **huge advantages over a distributed** server landscape, you can create a new Linux system very quickly, **without worrying about whether it will affect the performance or stability** of your existing systems.”

Jose Eskert, Senior System Programmer at Miami-Dade County.

**Thank You**
