5. Easy and agile development and administration for cloud, analytics and mobile computing  
*Break (15 minutes)*
6. Building the business case for cloud, analytics and mobile computing

# Numerous studies show how businesses gain competitive advantage by using analytics

**#1**

Rank CIOs give to analytics for contributing to an organization's competitiveness<sup>1</sup>

**54%**

Number of CxOs who say customers influence them to a *large* extent<sup>5</sup>

Organizations that embrace analytics are more than **2x** more likely to outperform their peers<sup>2</sup>

Financial outperformers are **64%** more likely to use analytics to evaluate talent supply and demand on an ongoing basis<sup>3</sup>

Enterprises that apply advanced analytics have **33%** more revenue growth and **12x** more profit growth<sup>4</sup>

<sup>1</sup> IBM CIO Study 2009  
<sup>2</sup> IBM IBV/MIT Sloan Management Review Study 2011  
<sup>3</sup> IBM CHRO Study 2010  
<sup>4</sup> IBM CFO Study 2010  
<sup>5</sup> IBM Institute of Business Value, "The Customer-Activated Enterprise"

# Many leading businesses use IBM analytics systems and software to gain that edge

A Brazilian credit union realizes **200%** internet growth and **600%** overall growth, sustaining it over 2 million members

The logo for PETROL, consisting of the word "PETROL" in white, bold, capital letters on a red rectangular background.

**PETROL**

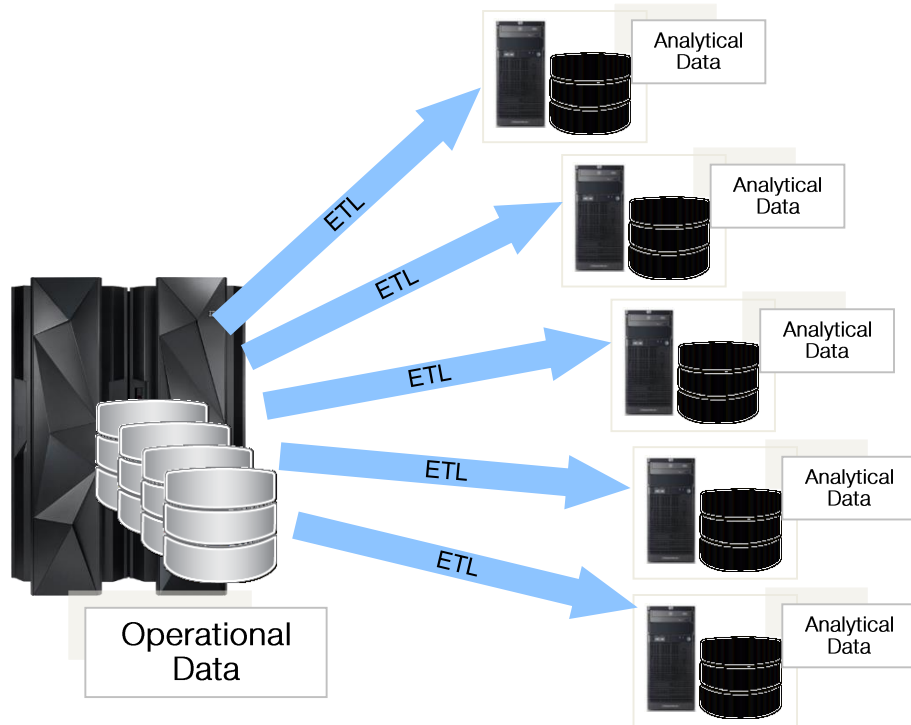

Slovenian automotive goods and services company implements smarter commerce – **suggest-selling at point-of-sale** – to significantly increase sales

US-base cancer research center realizes **100% payback in 3 months** through proactive identification of fraudulent activities, and optimizes financial compliance processes

The more a business uses analytics, the better it performs

# Running analytics off-platform doesn't pay for a mainframe-centric business...

## A large European bank:

- 120 database images created from bulk data transfers
- 1,000 applications on 750 cores with 14,000 software titles
- ETL consuming 28% of total distributed cores and 16% of total MIPS

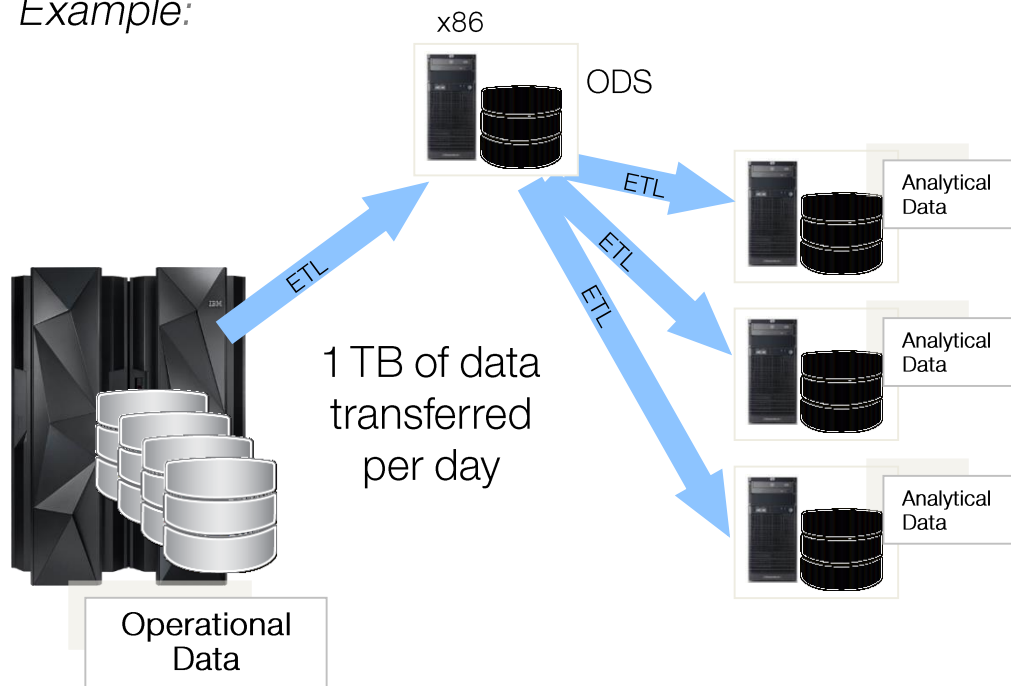

## A large Asian bank:

- One mainframe devoted exclusively to bulk data transfers
- ETL consuming 8% of total distributed core and 18% of total MIPS

***With this strategy, IT costs grow faster than business growth***

# ... Rather it leads to significant data transfer costs

Example:

Estimated 4 yr. cost summary

System costs  
= \$9,864,412

Labor costs  
= \$393,927

Total =  
\$10,258,339

Assuming 4 cores on z13 running at 85% utilization and 12 cores on x86 servers run at 45% utilization, transfer will burn **519 MIPS** and use **10 x86 cores per day**

# Today, z Systems are designed to run analytics, creating a first-class System of Insight

- **System of Record**
  - Accelerate operational analytics with a hybrid database management system
- **System of Insight**
  - Create 360° view of customers using Hadoop and descriptive analytics
  - Use predictive analytics and real-time in-transaction scoring
  - Leverage columnar analysis option

*Gain a competitive edge by co-locating analytics software with data and accelerators in the System of Record*

# z Systems complete solution – query acceleration, Big Data, BI, Predictive Analytics, and more

*Data Store*

DB2 for z/OS

*Big Data (Hadoop)*

InfoSphere BigInsights

*Business Intelligence and Reporting*

IBM Cognos Enterprise

*Predictive Analytics, Modeling, Scoring*

IBM SPSS

*BLU Acceleration*

DB2 LUW

IBM z Systems

DB2 Analytics Accelerator

Competitive Project Office

Green boxes denote Linux on z software.

Blue denotes z/OS software. Cognos runs on both.

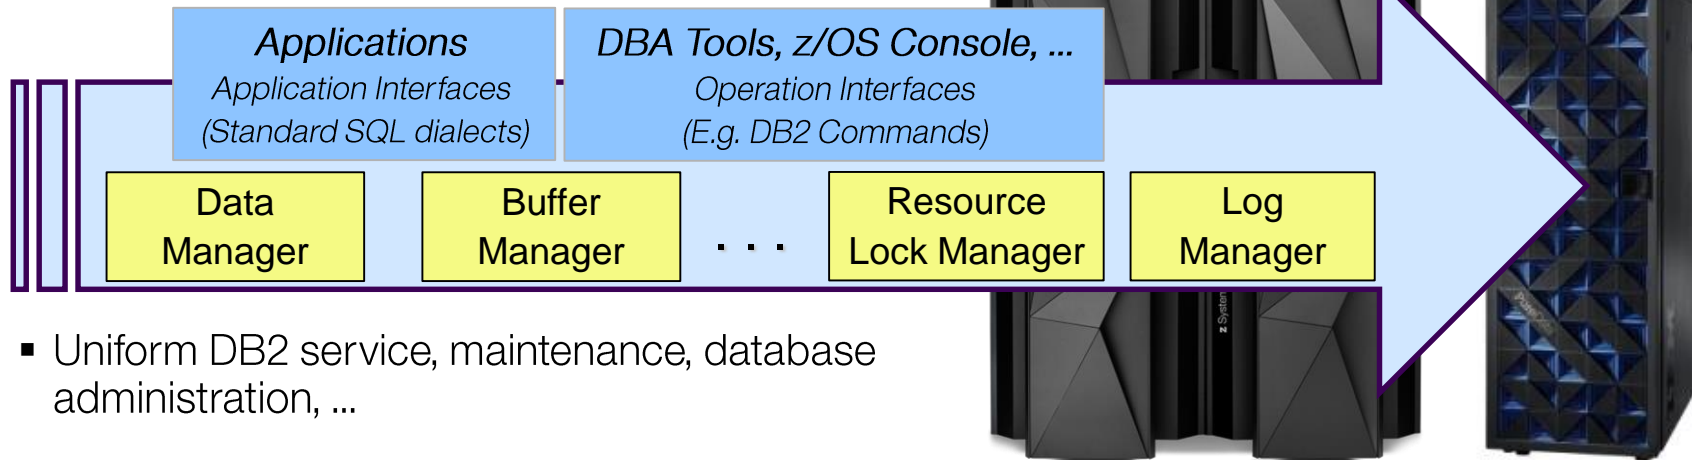

# DB2 for z/OS and the DB2 Analytics Accelerator create a hybrid database management system... ... to accelerate operational analytics

Data Store

DB2 for z/OS

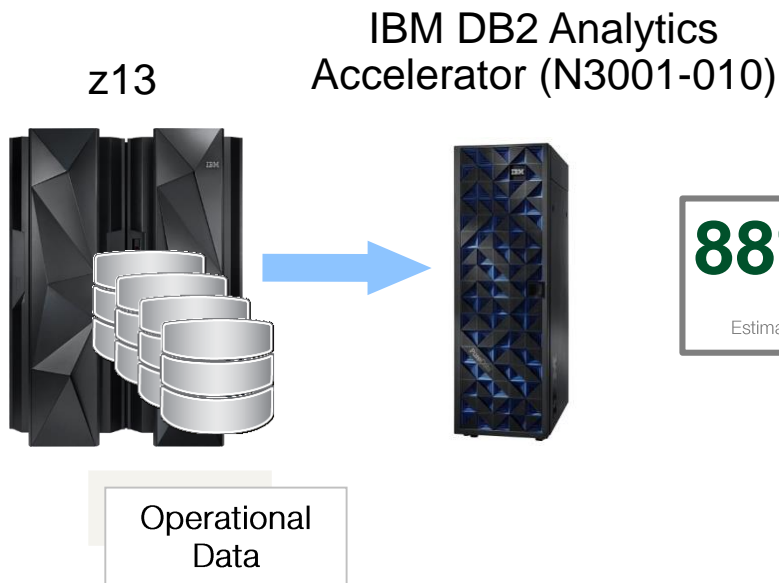

- Uniform and transparent access for transactional and analytical applications

- Uniform DB2 service, maintenance, database administration, ...

# DB2 Analytics Accelerator as analytics data store saves over 88% in ETL and transfer costs

Example:

Estimated 4 yr. cost summary

System costs  
= \$1,052,901

Labor costs  
= \$137,613

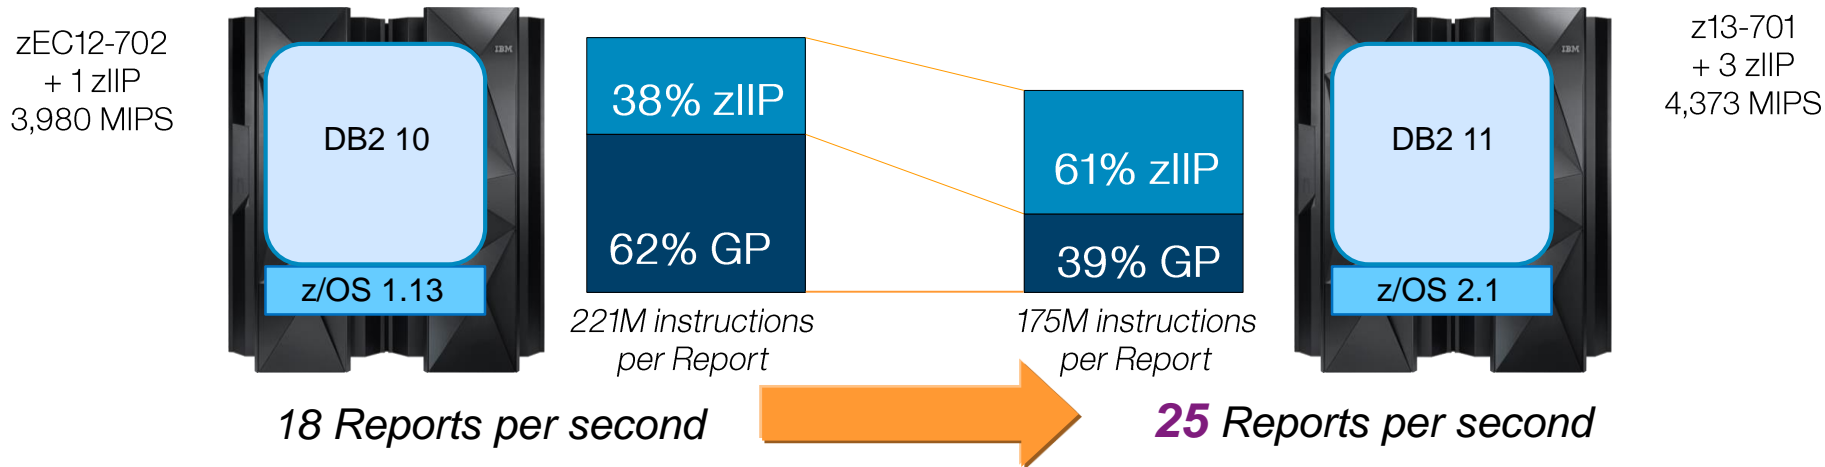

Total =  
\$1,190,513

**88%** Lower  
cost

Estimated for systems compared

Assuming 4 cores on z13 running at 85% utilization and 140 x86 cores on N3001-010 running at 45% utilization, transfer will burn **260 MIPS** and use **0.44 x86 core per day**

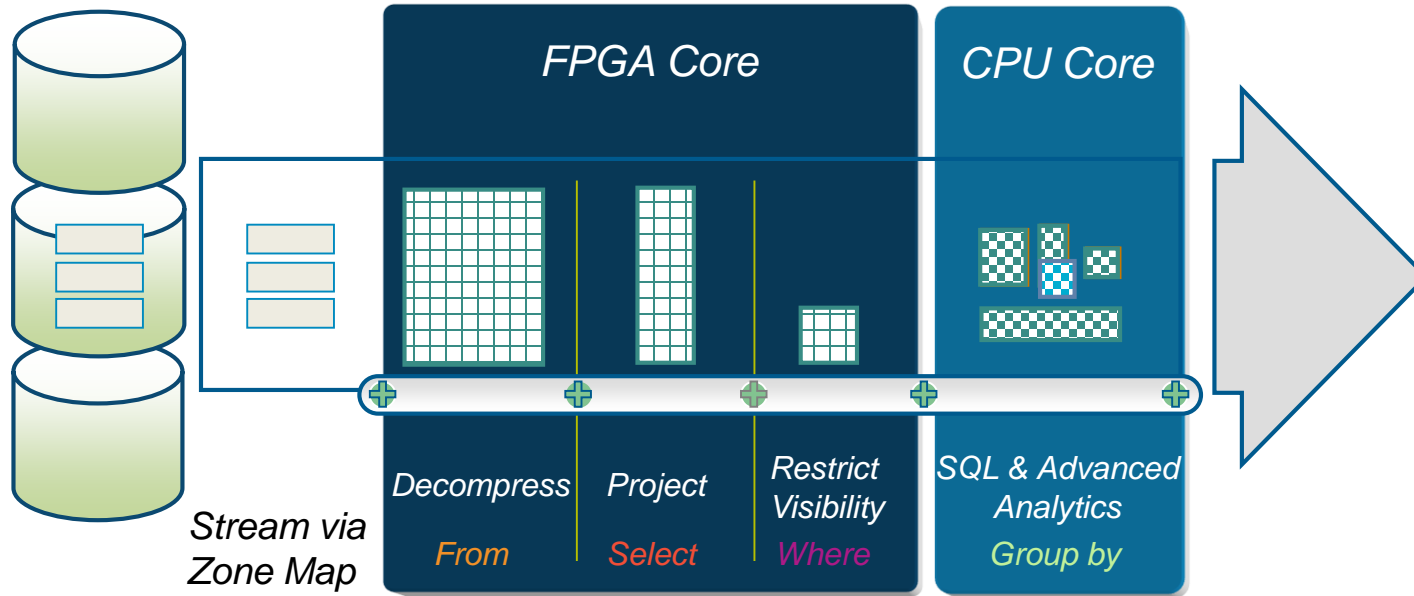

# Maintaining hardware and software currency of z Systems and DB2 will improve performance

- **Over 60% zIIP offload** – from newest generation of specialty processors with SMT – yields **better price performance**
- **21% shorter path length** – resulting from DB2 for z/OS upgrade – **reduces CPU usage**
- **39% higher throughput** – from combined effects of software and hardware upgrade – **reduces elapsed time** to execute operational reports

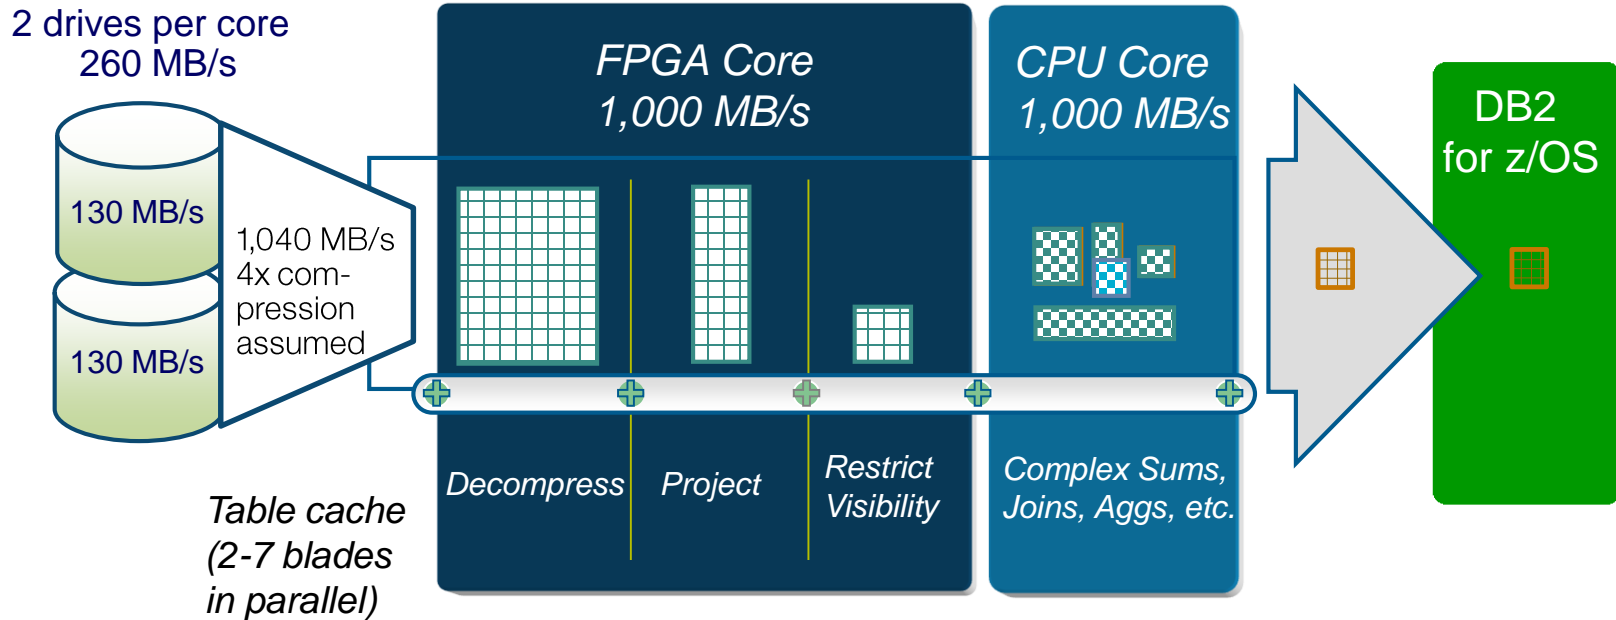

Results are for this workload. Your results may vary.

# DB2 Analytics Accelerator uses FPGA technology for industry unique data stream processing...

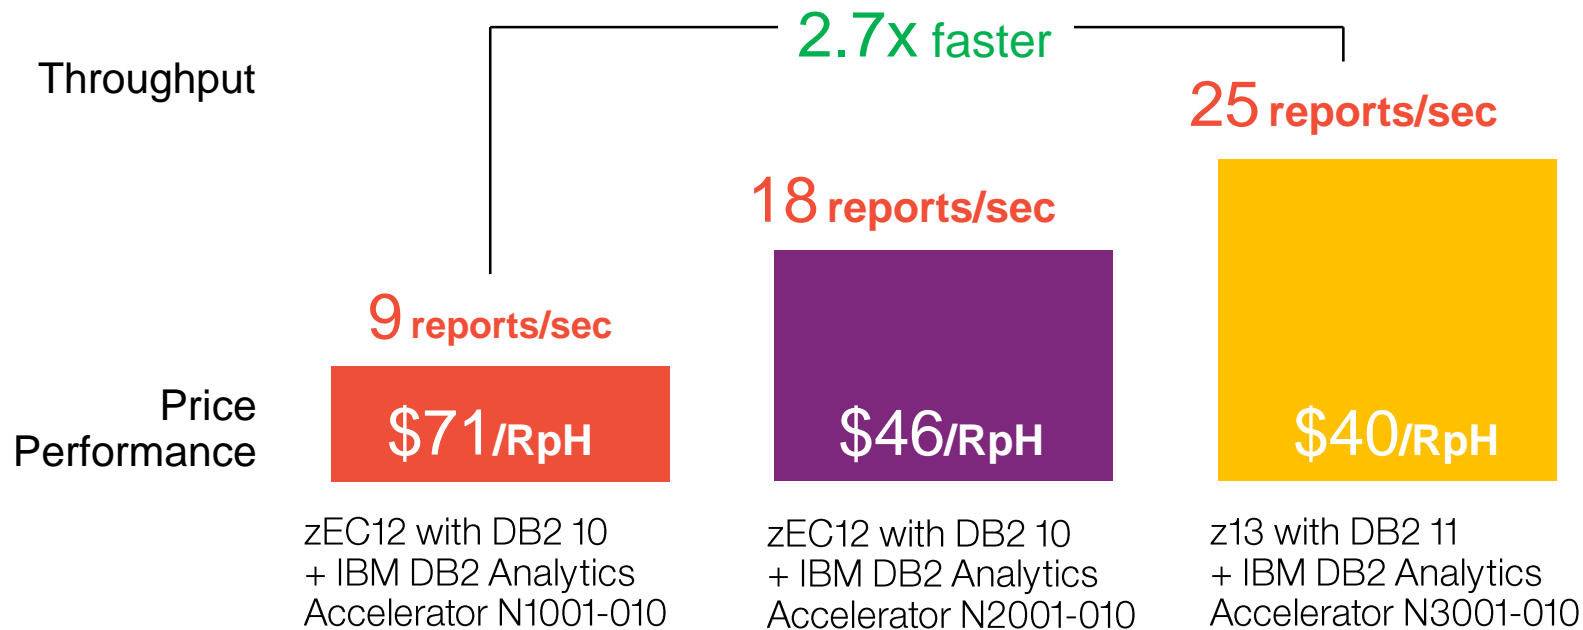

```
Select State, Age, Gender, count(*) From MultiBillionRowCustomerTable Where BirthDate < < '01/01/1960' And State in ("FL", "GA", "SC", "NC") Group by State, Age, Gender
```

# ...which drives blazing speed through balanced design

# Continuous platform optimizations improve throughput and price performance

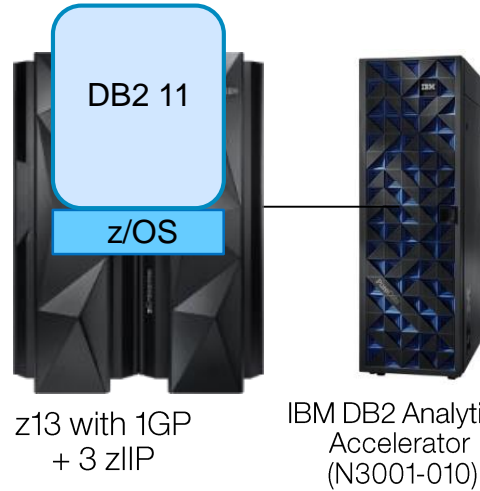

# DB2 and the Analytics Accelerator score a big win over the competition

Standalone  
Pre-integrated  
Competitor V4

Full Unit

**\$151**  
per Report per Hour  
(3yr TCA at discount)  
  
(75% on software,  
50% on hardware)

IBM z Systems

**\$40**

per Report per Hour  
(3yr TCA at no discount)

**2x** Better performance  
**3.8x** Better price performance

Estimated for systems compared

|   |             |
|---|-------------|
| Estimated Workload Time*                                      | 226 mins    |
| Reports per Hour  | 42,787      |
| Competitor Full Unit (HW+SW+Storage) using discounted pricing | \$6,451,161 |

|  |             |
|--|-------------|
| Workload Time  | 105 mins    |
| Reports per Hour   | 92,095      |
| z13 (1 GP + 3 zIIP, HW+SW+ Storage) + Accelerator V4.1 with PDA N3001-010 hardware | \$3,652,131 |

\* Competitor Full Unit workload time estimated from Eighth Unit measurements assuming perfect linearity. Actual results will vary. Comparing test results of an IBM zEnterprise Analytics System 9700 with an estimated performance on competitor full unit configuration (version available as of 12/31/2014), for a materially identical 10 TB BIDAD "Fixed Execution" workload in a controlled laboratory environment. BIDAD "Fixed Execution" workload measures elapsed time for executing 161,166 concurrent reports using 80 concurrent users. Intermediate and complex reports are automatically redirected to IBM DB2 Analytics Accelerator for z/OS (powered by N3001-010 hardware or Mako). Price comparison of 3YR Total Cost of Acquisition (TCA) based on U.S. prices current as of December 31, 2014, including hardware, software, and maintenance. Used discounted pricing for competitor with 50% hardware discount and 75% software discount. Compared prices exclude applicable taxes, and are subject to change without notice. Competitor configuration: Full Unit including competitor recommended software options and features. IBM configuration: z13 platform with 1CP and 3 zIIPs with 128GB memory and DB2 Analytics Accelerator Full Rack (N3001-10) with 7 S-blades (140 Intel E5-2680v2 2.8GHz cores and 128GB RAM), 2 Hosts (1 active=1 passive) with 20 Intel E5-4650v2 2.4GHz cores each and 12 disk enclosures, each with 24 600GB SAS drives. Results may not be typical and will vary based on actual workload, configuration, applications, queries and other variables in a production environment. Users of this document should verify the applicable data for their specific environment.

Blue denotes z/OS software. Cognos runs on both.

# Hadoop, plus descriptive analytics, gives businesses a 360° view of their customers

## Hadoop:

- A framework for “distributed” storage and processing of very large data sets across clusters of Linux on z guests
- Takes advantage of massively parallel processing
- Uses simple programming models based on MapReduce

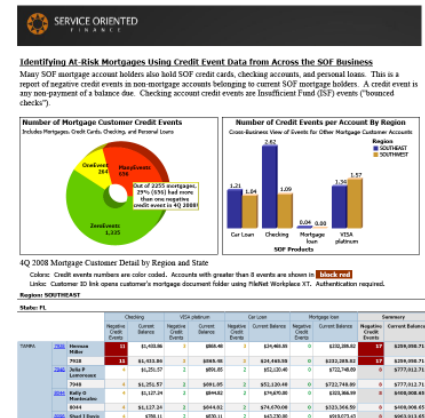

IBM  
BigInsights

## Descriptive Analytics:

- Insight into what has happened
- Provides reports/dashboards
  - Aggregate and drill-down on data using different dimensional attributes such as by date, geography, demographics, etc.
- Visualize data using interactive charts, graphs, maps and other objects
- Runs on Linux on z and z/OS

IBM Cognos  
Enterprise

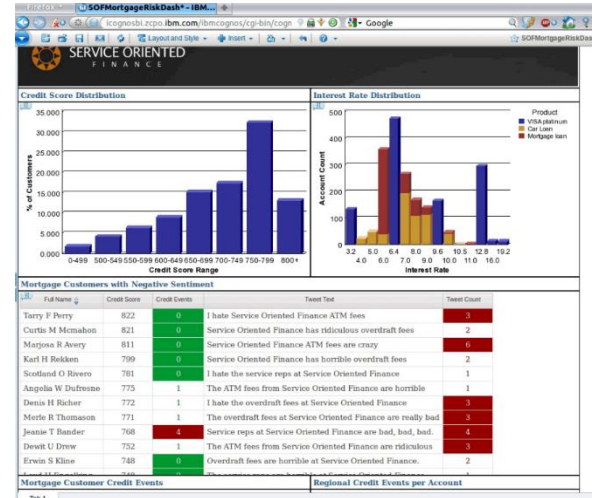

# DEMO: 360° view, from sentiment analysis plus traditional customer data, is an important first step

- Use IBM BigInsights to identify good customers who have made complaints on Twitter
- Combine that Twitter data with mortgage data in the data warehouse
- Build a report with IBM Cognos Report Studio to show complete customer profile

*Many businesses view this as important functionality, before getting deeper into analytics*

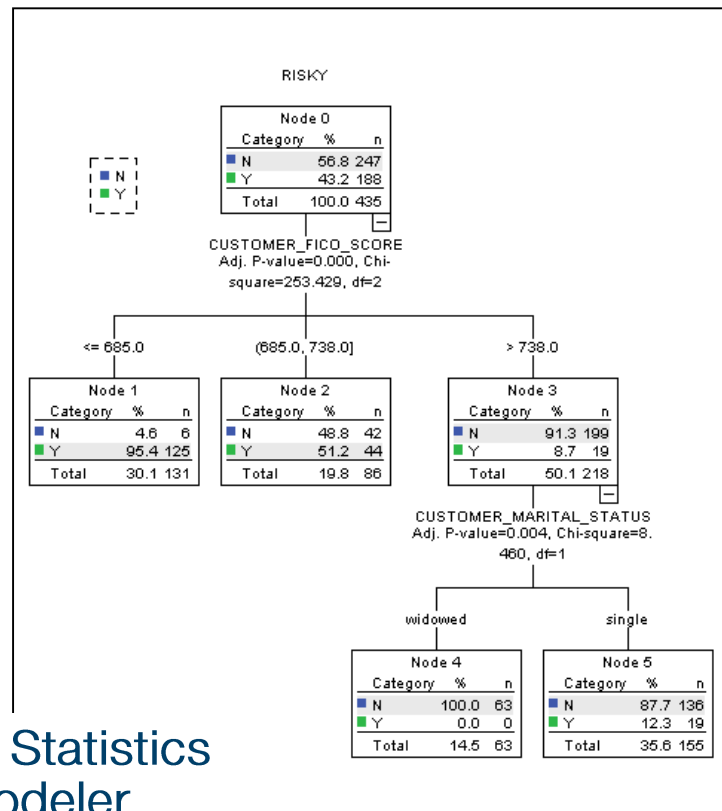

# Predictive analytics truly opens up avenues for fast business insight

## Predictive Analytics:

- Predicts what might happen
- Provides scores that helps in optimized decision support
  - Build models using historical data and mathematical algorithms such as clustering or classification
- Some models provide rules that can be integrated into business processes
- Runs on Linux on z

IBM SPSS Statistics  
and Modeler

# Scoring is used to determine how closely a new pattern matches a previously known pattern

## Banking

**Card:** Use scoring to determine transaction risk based on spending history

**Money laundering risk:** Based on money wiring to multiple accounts keeping amount below threshold

## Retail

**Sales opportunity:** Real-time scoring for target marketing

## Government

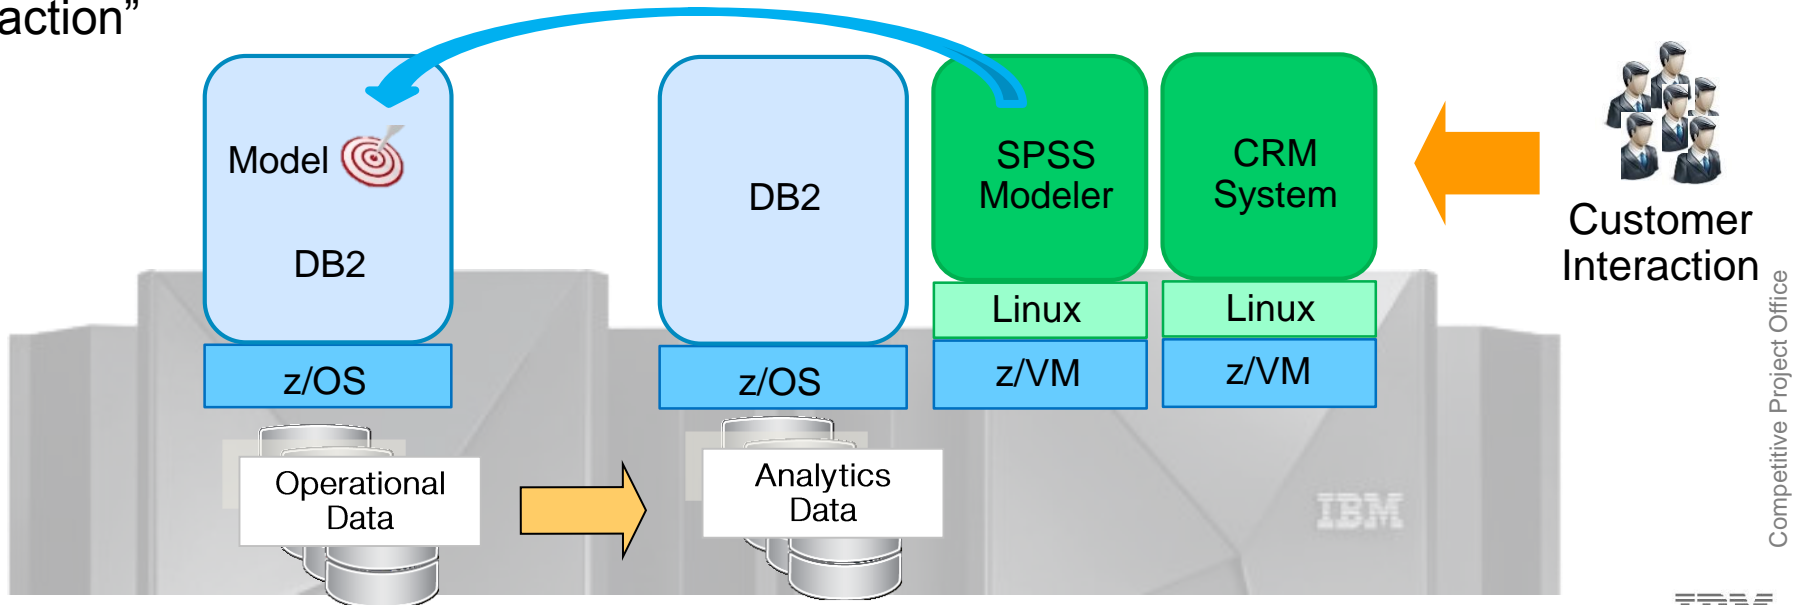

**Compliance:** Score to detect non-compliant behavior and tax evasion

**Social Services:** Assess likelihood that individual will need multiple agency support to proactively engage various agencies to create best outcome and manage costs

# Predictive analytics feeds into in-transaction scoring to improve business outcomes

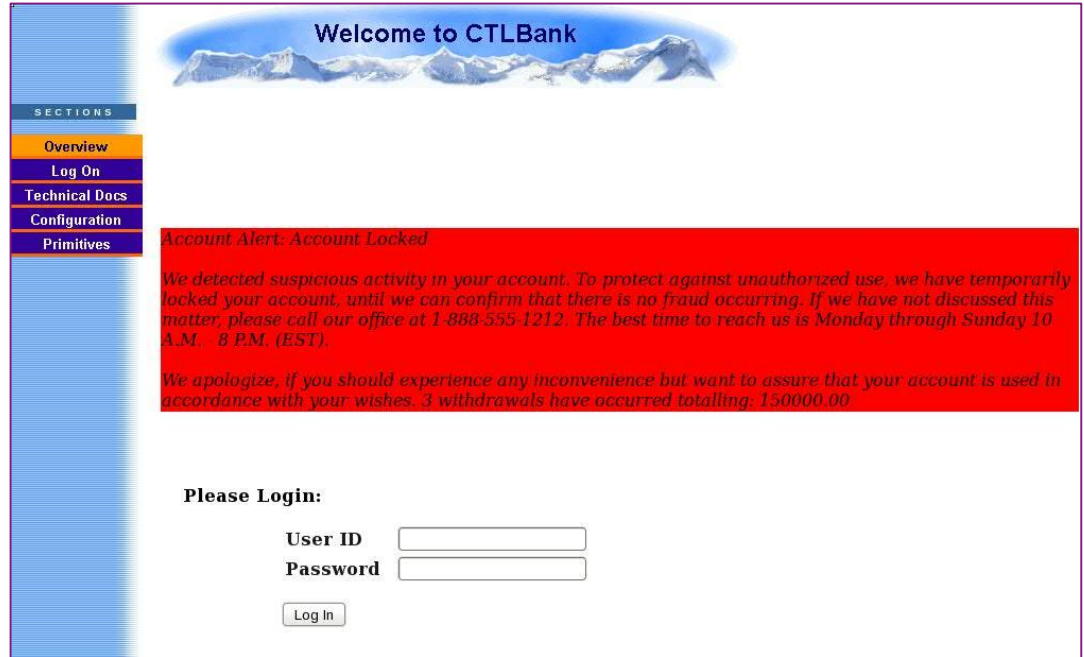

- Instantaneous and accurate decision based on real-time information or events
- Reduce risk by putting high risk customers on “watch”
- Increase satisfaction of valued customers by providing offers using “next-best action”

# DEMO: Score online banking transactions for Next Best Action and Fraud Detection

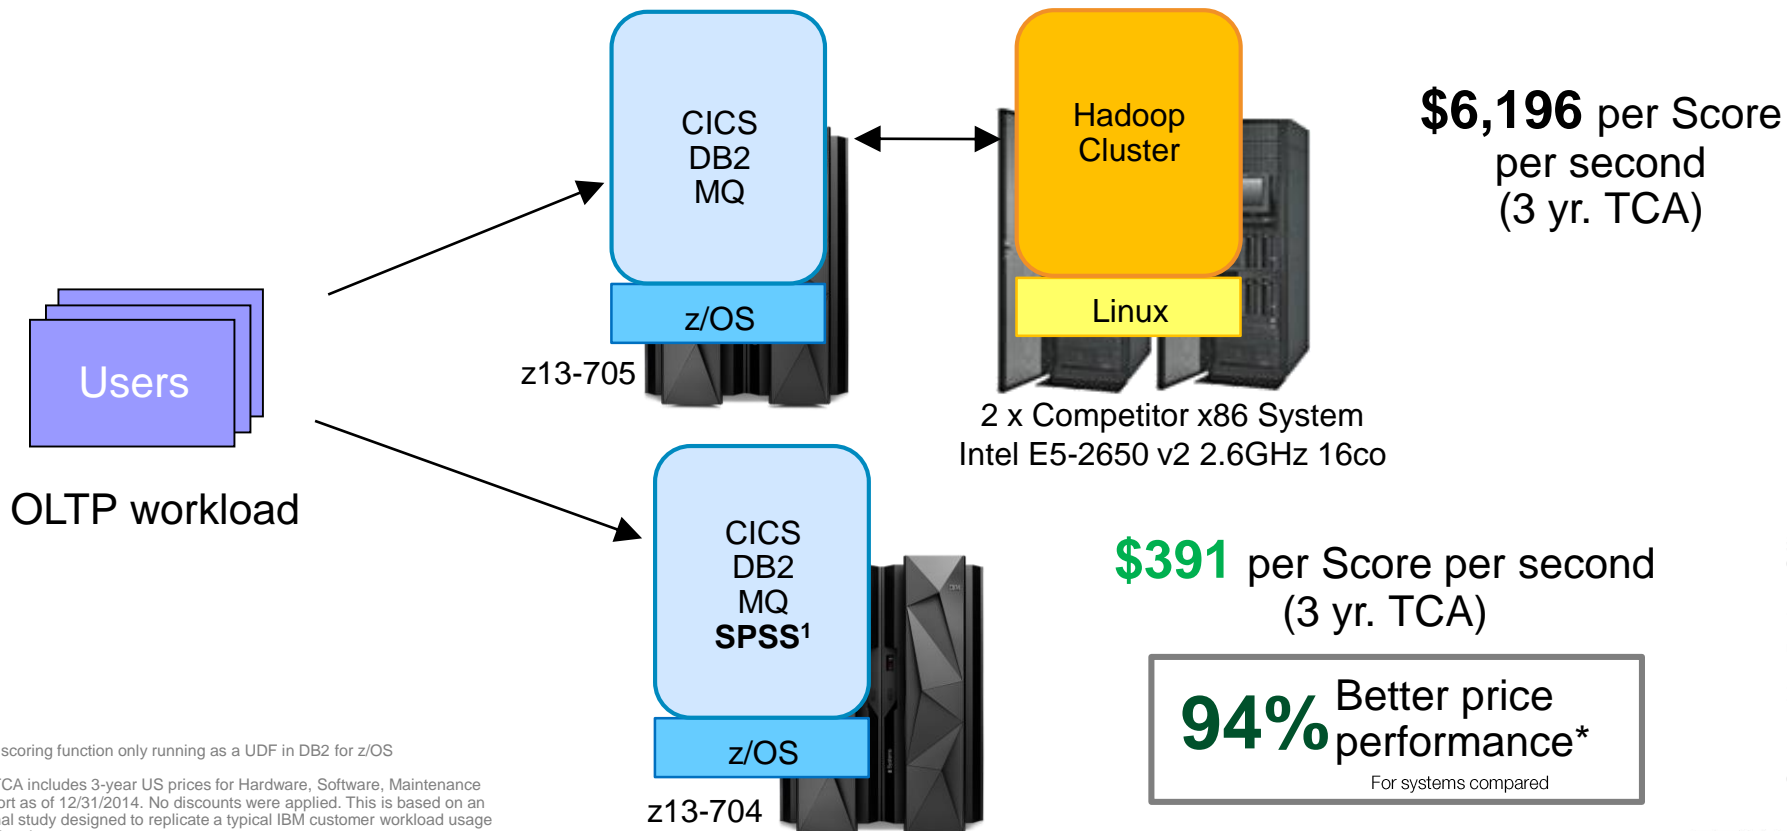

## In-transaction scoring using SPSS Modeler and CICS/DB2 core banking workload

1. High value deposits with net balance between \$100-\$500K initiate wealth management service recommendation on welcome page
2. Multiple withdrawals within short period of time trigger fraud alert and lock the account

The screenshot shows the CTLBank website interface. At the top, it says "Welcome to CTLBank" with a mountain range image. On the left, there is a navigation menu with "SECTIONS" and options: "Overview", "Log On", "Technical Docs", "Configuration", and "Primitives". The main content area features a red alert box with the following text: "Account Alert: Account Locked", "We detected suspicious activity in your account. To protect against unauthorized use, we have temporarily locked your account, until we can confirm that there is no fraud occurring. If we have not discussed this matter, please call our office at 1-888-555-1212. The best time to reach us is Monday through Sunday 10 A.M. - 8 P.M. (EST).", and "We apologize, if you should experience any inconvenience but want to assure that your account is used in accordance with your wishes. 3 withdrawals have occurred totalling: 150000.00". Below the alert, there is a "Please Login:" section with input fields for "User ID" and "Password", and a "Log In" button.

# On-platform scoring achieves 94% better price performance

<sup>1</sup> Modeler scoring function only running as a UDF in DB2 for z/OS

\* 3-Year TCA includes 3-year US prices for Hardware, Software, Maintenance and Support as of 12/31/2014. No discounts were applied. This is based on an IBM internal study designed to replicate a typical IBM customer workload usage in the marketplace.

# When running Linux on z, accelerate data analysis with BLU Acceleration

Fast Answers. Simply Delivered.

## *What is BLU Acceleration?*

- In-memory analytic database integrated into DB2 for Linux on z Systems
- Multiple IBM innovations
  - In-memory processing of columnar data without the limitations of memory size
  - Analyze compressed data with actionable compression
  - CPU Acceleration

**BLU** Acceleration

*Analyze more data faster and more efficiently*

# Row-organized data can be inefficient for some analytic workloads

- Analytics queries often operate on only a small number or even a single column value across a very large number of rows
  - For example: MIN, MAX, SUM, COUNT, AVG
- Retrieving all column values is inefficient when only a small number of columns (maybe just 1) are needed

Row Organized Customer Table

|        | CUST_ID | FIRST | LAST   | AGE | SEX |
|--------|---------|-------|--------|-----|-----|
| Row 1  | 466     | Steve | Miller | 49  | M   |
| Row 2  | 467     | Pat   | Smith  | 32  | F   |
| Row 3  | 478     | Tina  | Jones  | 27  | F   |
| Row... | 479     | Rick  | Miller | 42  | M   |
| Row N  | 481     | Tom   | Smith  | 36  | M   |

Each colored row represents a data page

Query:  
*Select AVG(AGE) from Customer*

I/O

|     |       |        |    |   |
|-----|-------|--------|----|---|
| 466 | Steve | Miller | 49 | M |
| 467 | Pat   | Smith  | 32 | F |
| 478 | Tina  | Jones  | 27 | F |
| 479 | Rick  | Miller | 42 | M |
| 481 | Tom   | Smith  | 36 | M |

*Not efficient*

**AVG=37.2**

# Column-organized data is better suited and more efficient for some analytic workloads

- BLU Acceleration organizes data into columns
- Column values for many records are combined into “pages” and stored on disk
- One I/O operation (to disk or RAM) can retrieve a column value for many rows
- Great for analytical workloads
  - When SPECIFIC columns are accessed for MANY records
  - No indexes required – columns are essentially “self indexing”

Column Organized Customer Table

| CUST_ID | FIRST | LAST   | AGE     | SEX   |
|---------|-------|--------|---------|-------|
| Col A   | Col B | Col C  | Col ... | Col N |
| 466     | Steve | Miller | 49      | M     |
| 467     | Pat   | Smith  | 32      | F     |
| 478     | Tina  | Jones  | 27      | F     |
| 479     | Rick  | Miller | 42      | M     |
| 481     | Tom   | Smith  | 36      | M     |

Each colored column represents a data page

Query:  
*Select AVG(AGE) from Customer*

|    |
|----|
| 49 |
| 32 |
| 27 |
| 42 |
| 36 |

AVG=37.2

*Very Efficient*

# DEMO: BLU Acceleration in DB2 10.5

- Two fact tables each loaded with 250M records
  - Uncompressed data size = 25GB
  - BLU table, 4.8GB compressed (5.7x), 2.75GB buffer pool
  - Row-organized table, 7.26GB compressed (3.8x), 2.75GB buffer pool
- Compare performance of BLU Acceleration table vs. traditional row-organized table

| <i>Query Description</i>   | <b>BLU Acceleration Advantage</b> |
|--|-----------------------------------|
| <b>Query 1</b><br>Count the total number of records in the fact table (250 million)        | <b>7x</b>                         |
| <b>Query 2</b><br>Calculate the <b>average profit per sale</b> for all 250 million records | <b>8x</b>                         |

# Analytics on z13 is simpler and faster, laying the foundation for digital business growth

## **SIMD technology**

*Speeds up processing for compute-intensive analytics workloads*

## **10 TB Memory**

*Improves data buffering and in-memory analytics*

## **Faster I/O**

*Reduces data transactional latency*

## **2x Compression**

*Reduces CPU usage, reduces storage requirements, increases memory efficiency*

## **SMT technology**

*Improves response time and throughput of data-driven workloads*

# z Systems – an exceptional System of Record and a first-class System of Insight

**60+%** zIIP offload  
for z13+DB2 11

**39%** Higher throughput  
for z13+DB2 11 than  
previous version

**3.8x** Better cost per workload  
for z13+ Analytics Accel.  
than competition
