

A decorative graphic in the top left corner consists of several overlapping circles of various colors (yellow, orange, red, purple, blue) that are divided into segments, resembling a stylized sunburst or a cluster of data points.

# **The Gold Standard for Enterprise Computing**

## **Mainframe Skills – The Myths and the Reality**

## There's a perception of a mainframe skills shortage...

- ... which might discourage companies from consolidating onto the platform
- ... or lead others to consider moving off the mainframe altogether

**...Let's look at the facts  
and try to understand the real picture**

# Mainframe usage is growing and is projected to continue

Finally, despite regular declarations that “the mainframe is dead,” the research shows this has never been further from the truth. In reality, the mainframe is working harder than ever. Almost two-thirds of respondents (62 percent) are now using mainframe applications, which were initially designed to perform back-end functions, to now support external-facing services, such as e-commerce (chart 9). This is putting added pressure on the mainframe and, in turn, increasing MIPS. This is evidenced by the fact that 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage (chart 10).

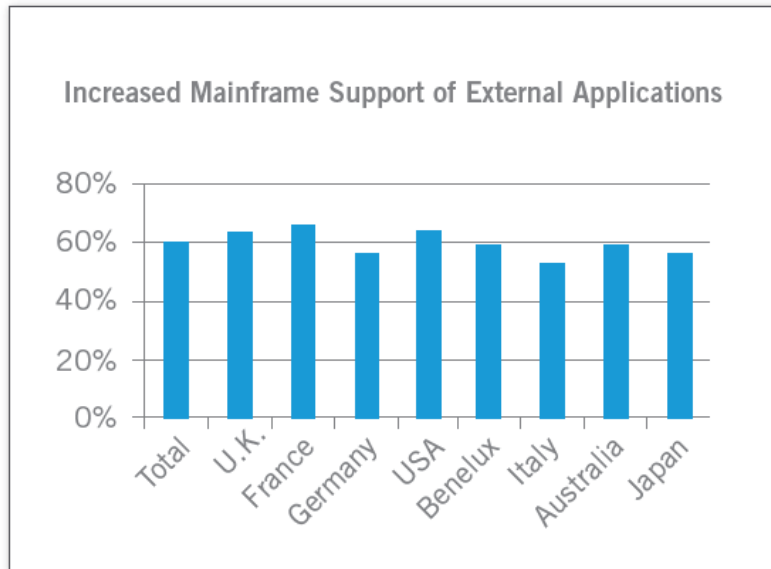

Chart 9: 62 percent of companies are using their mainframes to support external applications, such as online banking.

Chart 10: 68 percent of respondents believe that the increase in mobile applications is driving higher MIPS usage.

Compuware commissioned Vanson Bourne to study the impact of new IT trends and models. In September 2012, the independent research firm interviewed 520 CIOs from large enterprises across a range of industries in the U.S., Europe & Asia.

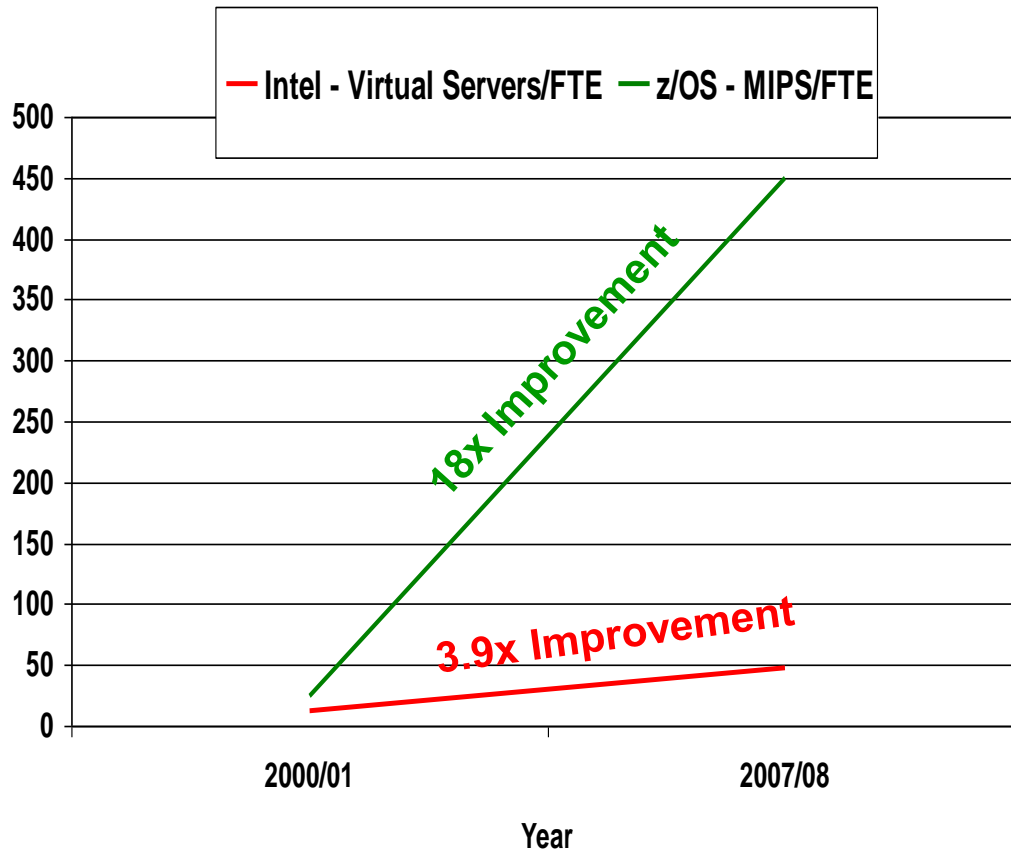

## The potential mainframe skills shortage is a very small portion of a projected *general IT* skills shortage

- IBM-CPO projects 80,000 additional mainframe positions needed WW by 2020 (35,000 in US)
  - 25,000 mainframe jobs filled from 2005-13
  - IBM Academic Initiative has trained 64,000 since 2003
- US government predicts **2M additional IT positions needed by 2020** in the US alone
  - Many retiring from non-mainframe IT
  - Far more jobs than graduates forecasted

***Mainframe skills are <2% of the full problem – and being addressed***

## Mainframe administration costs are typically less than distributed administration costs

- Mainframe servers drive increased labor productivity
  - Primarily because of **large scale consolidation** and **consistent structured management** practices
- Distributed servers achieve lesser gains
  - Due to smaller scale consolidation with ad hoc management practices

# Eagle studies validate that adding workload to mainframes *reduces* labor cost per unit of work

## Labor cost per mainframe MIPS

Source: IBM Eagle Team

# Today, mainframe system administrators use the latest workstation-based tools

**IBM z/OS Management Facility (z/OSMF)** - a modern, browser-based console for management of day-to-day operations and administration

- Maximizes productivity of a diversified workforce
  - Simplification of tasks
  - Enhanced collaboration
  - Reduced learning curve
- Role-based, scenario-based
- Integrates with other tools

*z/OSMF*

*Browser  
(Windows IE  
Firefox)*

## Tivoli Enterprise Portal

The screenshot displays the Tivoli Enterprise Portal interface. At the top, a navigation pane shows a tree view of the system structure, including 'Enterprise', 'New Tables for IMS Systems', 'PFWOLER', 'Windows OS', 'Prototype::TWS', and various job details. The main area is split into two parts: a 3D bar chart titled 'Job Duration' and a table titled 'Tivoli Workload Scheduler Detailed Job Status'.

The 'Job Duration' chart shows three bars representing the duration of jobs HOR50005, HOR50007, and HOR50001. The y-axis is labeled 'Seconds' and ranges from 0 to 400. Job HOR50005 has the highest duration, followed by HOR50001, and HOR50007 has the lowest.

The 'Tivoli Workload Scheduler Detailed Job Status' table provides a detailed view of job execution. The columns include Timestamp, Job Description, Application Identifier, Job Name, Operation Number, WS Identifier, Descriptive Text, Actual Start Time, Actual End Time, Duration, Error Code, and Job Status. The Job Status column uses color coding: Complete (green), Error (red), Started (orange), Waiting (grey), Ready (blue), and Active (yellow).

Two callout boxes provide additional context: one points to the bar chart with the text 'Graph showing duration times for each job that has executed', and another points to the Job Status column with the text 'Thresholds on Status states'.

Timestamp	Job Description	Application Identifier	Job Name	Operation Number	WS Identifier	Descriptive Text	Actual Start Time	Actual End Time	Duration	Error Code	Job Status
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50005	005	CPU	Operation 005	08:39:30	08:45:15	00:05:45	-	Complete
02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50007	007	CPU	Operation 007	08:45:15	08:45:20	00:00:05	MCP	Error

02/10/06 16:33:39	HOR50DAY	HOR50DAY	HOR50022	022	CPU	Operation 022	00:00:00	00:00:00	00:00:00	-	Waiting

(Tivoli Enterprise Portal was used in the demos in module 1)

## COBOL continues to be alive and well!

### Is Cobol being used in your organization to develop new business applications?

Yes: 53%

No: 44%

Don't know: 3%

Base: 131 IT professionals

### To what extent do your organization or systems use these programming languages?

Language name	A lot	A little	None
Cobol	48%	16%	37%
JavaScript	41%	41%	19%
Java	39%	40%	22%
C#	26%	25%	50%
VB.net	25%	38%	38%
Visual Basic	22%	49%	30%

Base: 202 IT professionals.

Percentages may not add up to 100 because of rounding.

- See ***“Leaving the Myth business to the ancient Greeks and Romans: COBOL is dead ... seriously?”*** ([http://get.syr.edu/news\\_alt.aspx](http://get.syr.edu/news_alt.aspx))

## Languages should be selected using “fit-for-purpose”

### COBOL's use

- building mission critical applications in the business logic and data management layers
- where records are processed and calculated
- where performance is important in delivering high service levels
  - sub-second response time is needed
- where you need to get programmers to learn a language quickly and that the resulting code needs to be readable by non-programmers
- not for the presentation layer where chasing a mouse around a screen is required

#### Compared to more modern programming languages such as Visual Basic, C#, C++ and Java, how does Cobol rate for these characteristics:

Function	Much better/ Somewhat better	About the same	Worse/ Much worse
Batch processing	82%	12%	4%
Transaction processing	65%	24%	9%
Handling business-oriented features	55%	21%	19%
Run-time efficiency	54%	33%	8%
Security	39%	38%	15%
Reporting	45%	37%	17%
Development cost	39%	32%	17%
Maintenance cost	43%	29%	18%
Ability to hire programmers	13%	25%	55%
Agility	15%	33%	45%

Base: 131 IT professionals

## Jettisoning CICS/COBOL can be problematic, risky and expensive

- Moving applications off the mainframe with a Micro Focus compiler can lead to significant performance issues
- HP (a major rehosting competitor) estimates that 20% of COBOL lines will need to be rewritten under Micro Focus

“COBOL and the mainframe run well together, and that's where I want to keep it.”

*David Brown managing director  
of the IT transformation group  
at BNY Mellon*

“Millions of users unknowingly activate CICS every day, and if it were to disappear the world economy would grind to a halt.”

*Phil Manchester, Personal Computer Magazine*

# DEMO: COBOL development using state-of-the-art Eclipse-based tools

COBOL files

Enhanced editing features

Remote system details

# Use a single, rich, integrated interface for all zEnterprise development

## Rational Developer for System z

- Supports all mainframe languages (COBOL, PL/I, C/C++, ASM, Java, etc.) and runtimes (CICS, IMS, Batch, USS, DB2, WAS, etc.)
- Fully supports development and reuse of all mainframe assets
- Connected and disconnected modes
  - Connect to z/OS for debug, job generation, etc.
  - Disconnect and reduce mainframe MIPS usage and costs
- Includes Web Services and JSON wrappers

The screenshot displays the RDz Eclipse interface with several key components and annotations:

- Remote System Explorer:** Shows a tree view of remote systems. Annotations include "Disconnected" and "Connected" with arrows pointing to specific system nodes, and "MVS PDS members" pointing to a folder.
- Code Editor:** Displays a JCL program with annotations for "Configurable Editor" and "USS Command Shell".
- Remote System Details:** Shows a "Remote Shell" window with a "Specify a TSO command to run" prompt, annotated as "TSO Command Shell".
- Properties View:** Shows a table of system properties, annotated as "Data set characteristics".
- JES sub-system view:** A window showing job details, annotated as "JES sub-system view".

**RDz Eclipse interface**

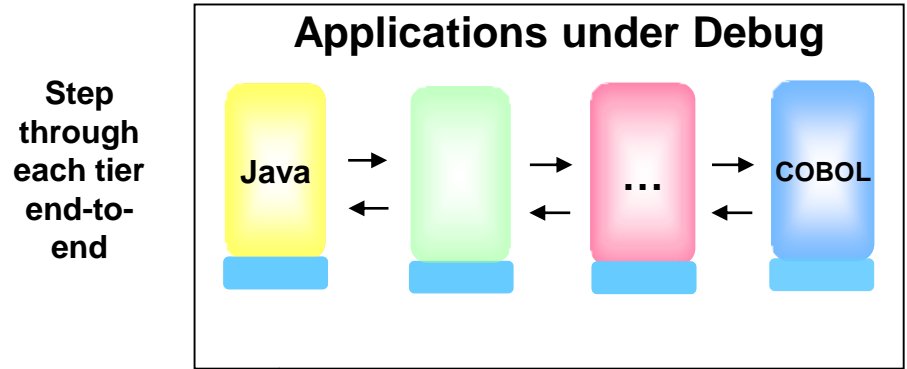

# Mainframe Problem Determination Tools (PDT) are integrated into the workstation development environment

- Easily debug and step through multi-tier applications

*Developing System z application with RDZ*

Step through each tier end-to-end

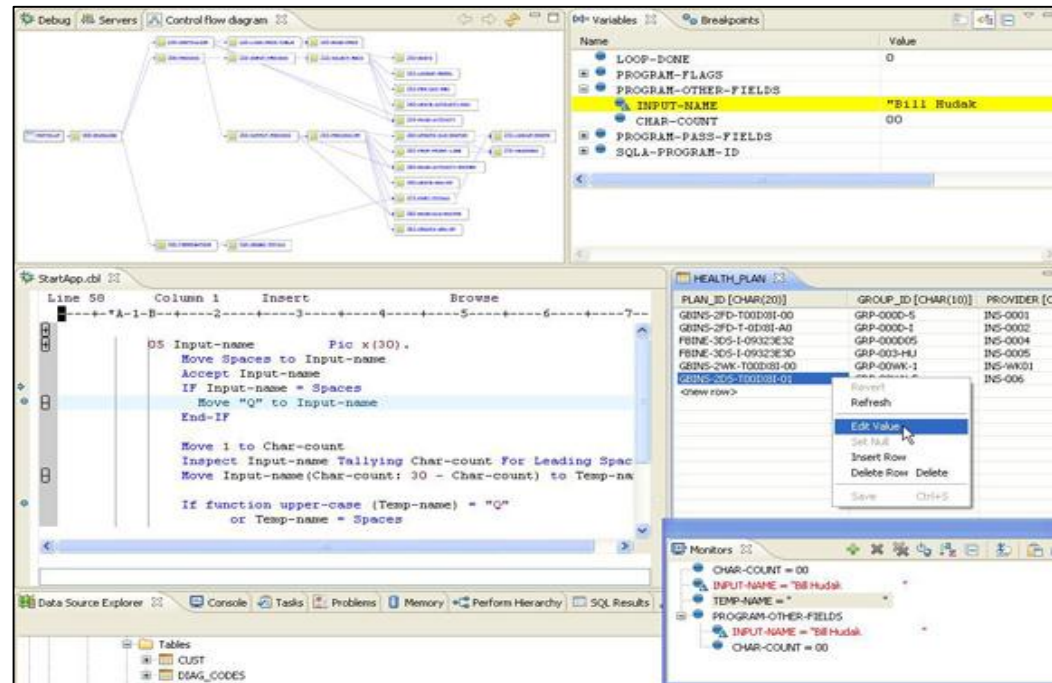

*Debugging application with Debug Tool*

- End-to-end debug
- Edit VSAM data
- Analyze ABEND logs!

## DEMO: Grow and enhance the skills set of development teams through use of multi-faceted, integrated tools

- RDz makes it easy for Java developers to also contribute to COBOL applications
- Features in RDz enable cross-fertilization of development skills
  - Results in more unified team, back-filling capabilities, enabling future growth
  - Reduces overhead and cost of multiple tool sets

The screenshot displays the RDz IDE with several panes:

- Control flow diagram:** Shows the execution flow of the COBOL program.
- Variables:** A table showing the current state of variables:
 

Name	Value
LOOP-DONE	0
PROGRAM-FLAGS	
PROGRAM-OTHER-FIELDS	
INPUT-NAME	"Bill Hudak"
CHAR-COUNT	00
PROGRAM-PASS-FIELDS	
SQLA-PROGRAM-ID	
- Code Editor:** Shows COBOL code for processing input names:
 

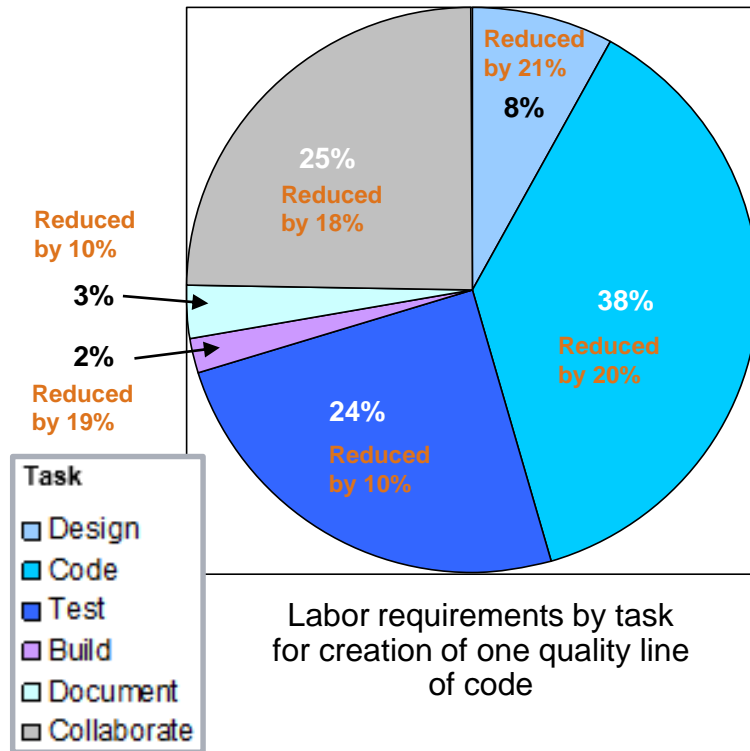

```

      D5 Input-name      Pic x(30).
      Move Spaces to Input-name
      Accept Input-name
      IF Input-name = Spaces
      Move "Q" to Input-name
      End-IF
      Move 1 to Char-count
      Inspect Input-name Tallying Char-count For Leading Spac
      Move Input-name(Char-count: 30 - Char-count) to Temp-na
      If function upper-case (Temp-name) = "Q"
      or Temp-name = Spaces
      
```
- HEALTH\_PLAN Table:** A table with columns PLAN\_ID, GROUP\_ID, and PROVIDER. A context menu is open over the row 'GENS-205-1001031-01'.
 

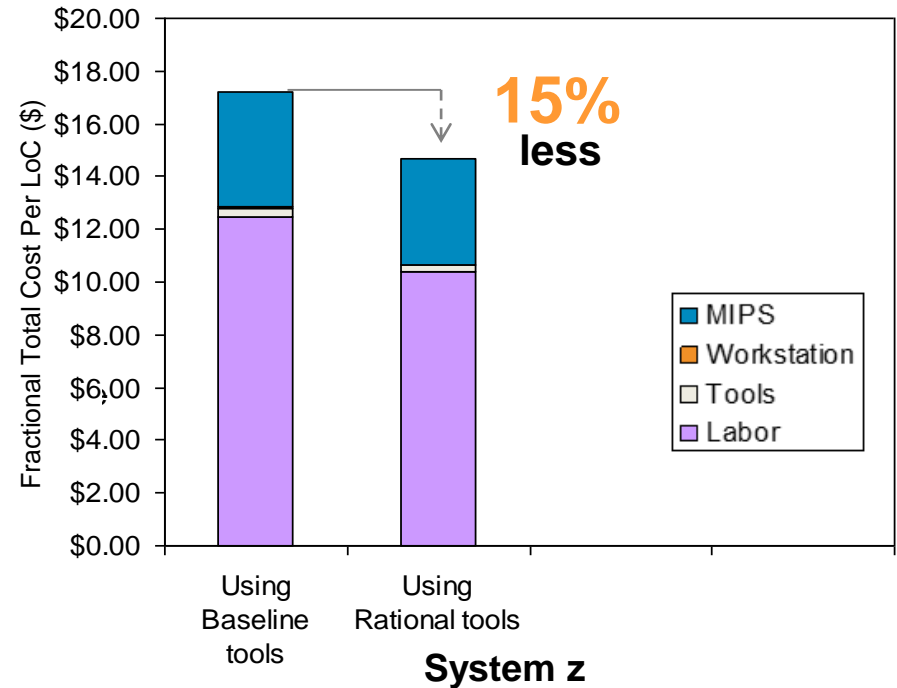

PLAN_ID [CHAR(20)]	GROUP_ID [CHAR(10)]	PROVIDER [CH
GENS-2FD-100101-00	GRP-0000-5	INS-0001
GENS-2FD-1-0101-00	GRP-0000-1	INS-0002
FBNE-305-1-0932CE32	GRP-000005	INS-0004
FBNE-305-1-0932CE30	GRP-003-HJ	INS-0005
GENS-2WK-1001031-00	GRP-00WK-1	INS-WK01
GENS-205-1001031-01		INS-006
<New row>		
- Monitors:** Shows the current values of variables:
  - CHAR-COUNT = 00
  - INPUT-NAME = "Bill Hudak"
  - TEMP-NAME = "
  - PROGRAM-OTHER-FIELDS
  - INPUT-NAME = "Bill Hudak"
  - CHAR-COUNT = 00

# Models show how modern, Eclipse-based tools can reduce development labor time and costs

Rational tools can reduce development labor by 17%

Rational tools can reduce development costs by 17%

## The mainframe may be 50 years old, but it continuously evolves for *tomorrow's* business requirements!

- Linux has been running on System z for over 10 years
- Web Services enablement has been available for years
- Transactional data on zEnterprise can easily be made available to mobile devices
- Mobile app development is integrated into mainframe development tools
- Compilations and unit testing can be done off-platform to reduce mainframe costs
- zEnterprise and Rational have solutions to help businesses undergo a DevOps transformation

# zEnterprise has tools that enable a DevOps approach for continuous development and operations

Today, customers expect **better product quality** and **shorter release cycles**. Businesses must meet this challenge, while **keeping costs low**

## DevOps:

- A movement that addresses this challenge
- Unites Development and Operations around a continuous and agile delivery model
- Enables Testers to have production-like environments
- Ensures an integrated view to govern and manage end-to-end delivery pipeline

# Today, compilation and unit test can be done off-platform to reduce costs and simplify operations

## Rational Development and Test (RD&T)

## No interruptions to mainframe operations

- Compile and Unit Test on an Intel x86 server running Linux
- RD&T server runs z/OS and all mainframe software
- Continuously updated to emulate the latest releases of zEnterprise hardware and software
- Enables developers to rapidly prototype new applications
- Eliminates costly delays by reducing dependencies on operations staff

## Using the right tools can yield significant business benefits

<b>Business challenge</b>	<b>Business benefit of Rational Development &amp; Test</b>
Application quality issues	Higher-fidelity environment than simulators provided by competitors
Cost of mainframe development	Development and Test MIPS can be re-allocated for higher value production workloads
Developer productivity affected by test system availability	More control in hands of developers – reduces dependency on test personnel
Slow time to market	Reduces delays, improves testing speed and accuracy
Competitive development costs at scale	Brings System z development and test in line with Unix and Windows

# Rational solution packages for zEnterprise help to automate the development and testing cycles for DevOps agility

# Use the Job Board to find needed skills

## Welcome to the System z Job Board

**Are you looking to hire talented System z professionals?**  
**Are you seeking a career with System z technology?**

Then you've found the right place! This web site connects IBM System z clients, partners and businesses with students and professionals seeking System z job opportunities.

**Special limited-time offer!** Employers who hire a candidate through Systemzjobs.com and agree to publicize their hiring success can receive a voucher to send an employee to an instructor-led [online System z course](#) (valued at \$1,200). Once you make a connection through Systemzjobs.com, simply send an email to [zskills@us.ibm.com](mailto:zskills@us.ibm.com) to request your voucher. First-come, first-served!

### Job Seekers

- **View Job Opportunities**  
Browse the hottest new jobs in the enterprise computing industry.
- **Receive job alerts**  
Set up a job agent so that jobs matching your search will be emailed to you.
- **Create a free account**  
Store job openings and manage your job search through your My Career account.
- **Access your account**  
Log in to your free My Career account.

### Employers/Recruiters

- **Post a job**  
Post your System z job here to attract the most qualified candidates from universities and industry.
- **Create a free account**  
Manage your job posts through your My Recruiting account.
- **Access your account**  
Log in to your free My Recruiting account.
