

Operation Decision Manager for z/OS: Where applications are transformed

Speaker Name and Title

Abstract

Are you looking for more agility to adapt your application to business changing conditions? Are you being asked to make your business policies more transparent? Would you like to make your mainframe applications more relevant to your organization without giving up control?

- Learn how adoption of IBM Operational Decision Manager can address these questions while enabling flexibility throughout the entire enterprise. During this session you will learn how:
- Business policy rules are enabling automation of frequently occurring decisions in your z/OS applications
- Application owners can provide better visibility of the business policy embedded in their systems
- Business policies can be changed quickly and accurately as the marketplace changes
- Business policies can be shared and reused across your entire organization and channels

Business Decisions are Everywhere

We need to add an eligibility check to meet the requirements of the new regulation.

Let's create a special promotion for our best customers.

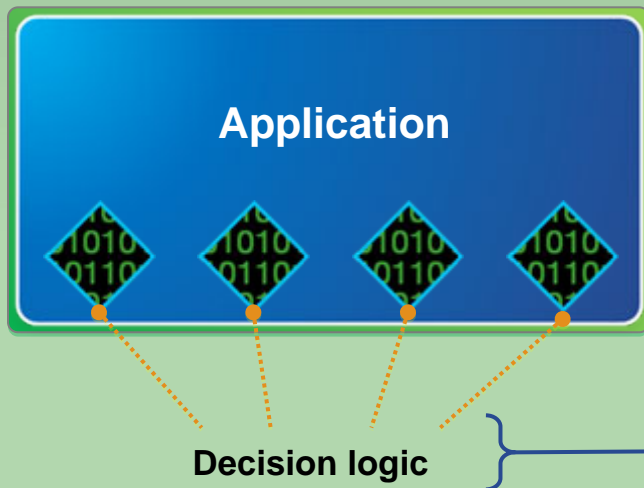

Can we automate approvals for this type of order?

And They Change Frequently

Externalize Decisions from Applications into Rules

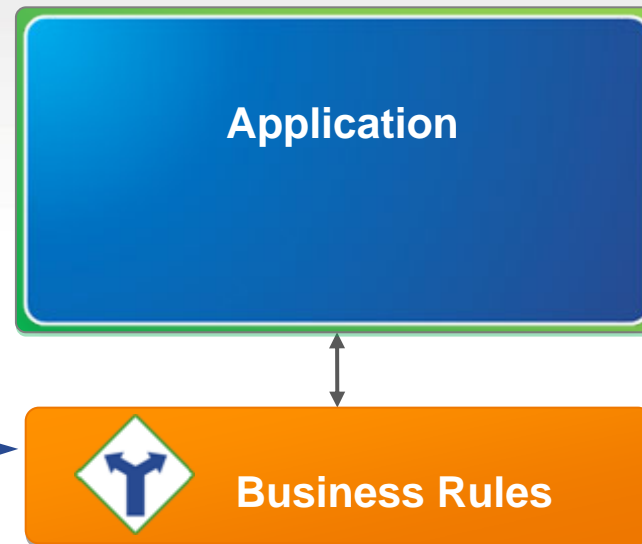

Manage decision logic independently from applications

Without Decision Management

- Rules written in software code cannot be read by business people
- Hard coded rules are difficult to change
- Rules intertwined within applications cannot be reused by other systems

With Decision Management

- Natural language rules can be easily read
- Externalized rules are easy to change
- Centralized rules enable reuse and consistency

Manage Decisions at the Speed of Business

Major system updates are not required for decision logic changes

- Customer searches for a price
- Insured members submit claims
- Brokers make trades

Determine pricing & bundling

Approve filed claim

Detect fraudulent trades

Why Decisions Change?

- Grow customer base
- Increase customer satisfaction
- Comply with regulatory changes

Business Rule Updates

- New pricing promotion (*monthly*)
- Updated claims policies (*quarterly*)
- Tightened regulations on trading (*annually*)

Redefined Application Change Cycle

What does ODM bring to z/OS?

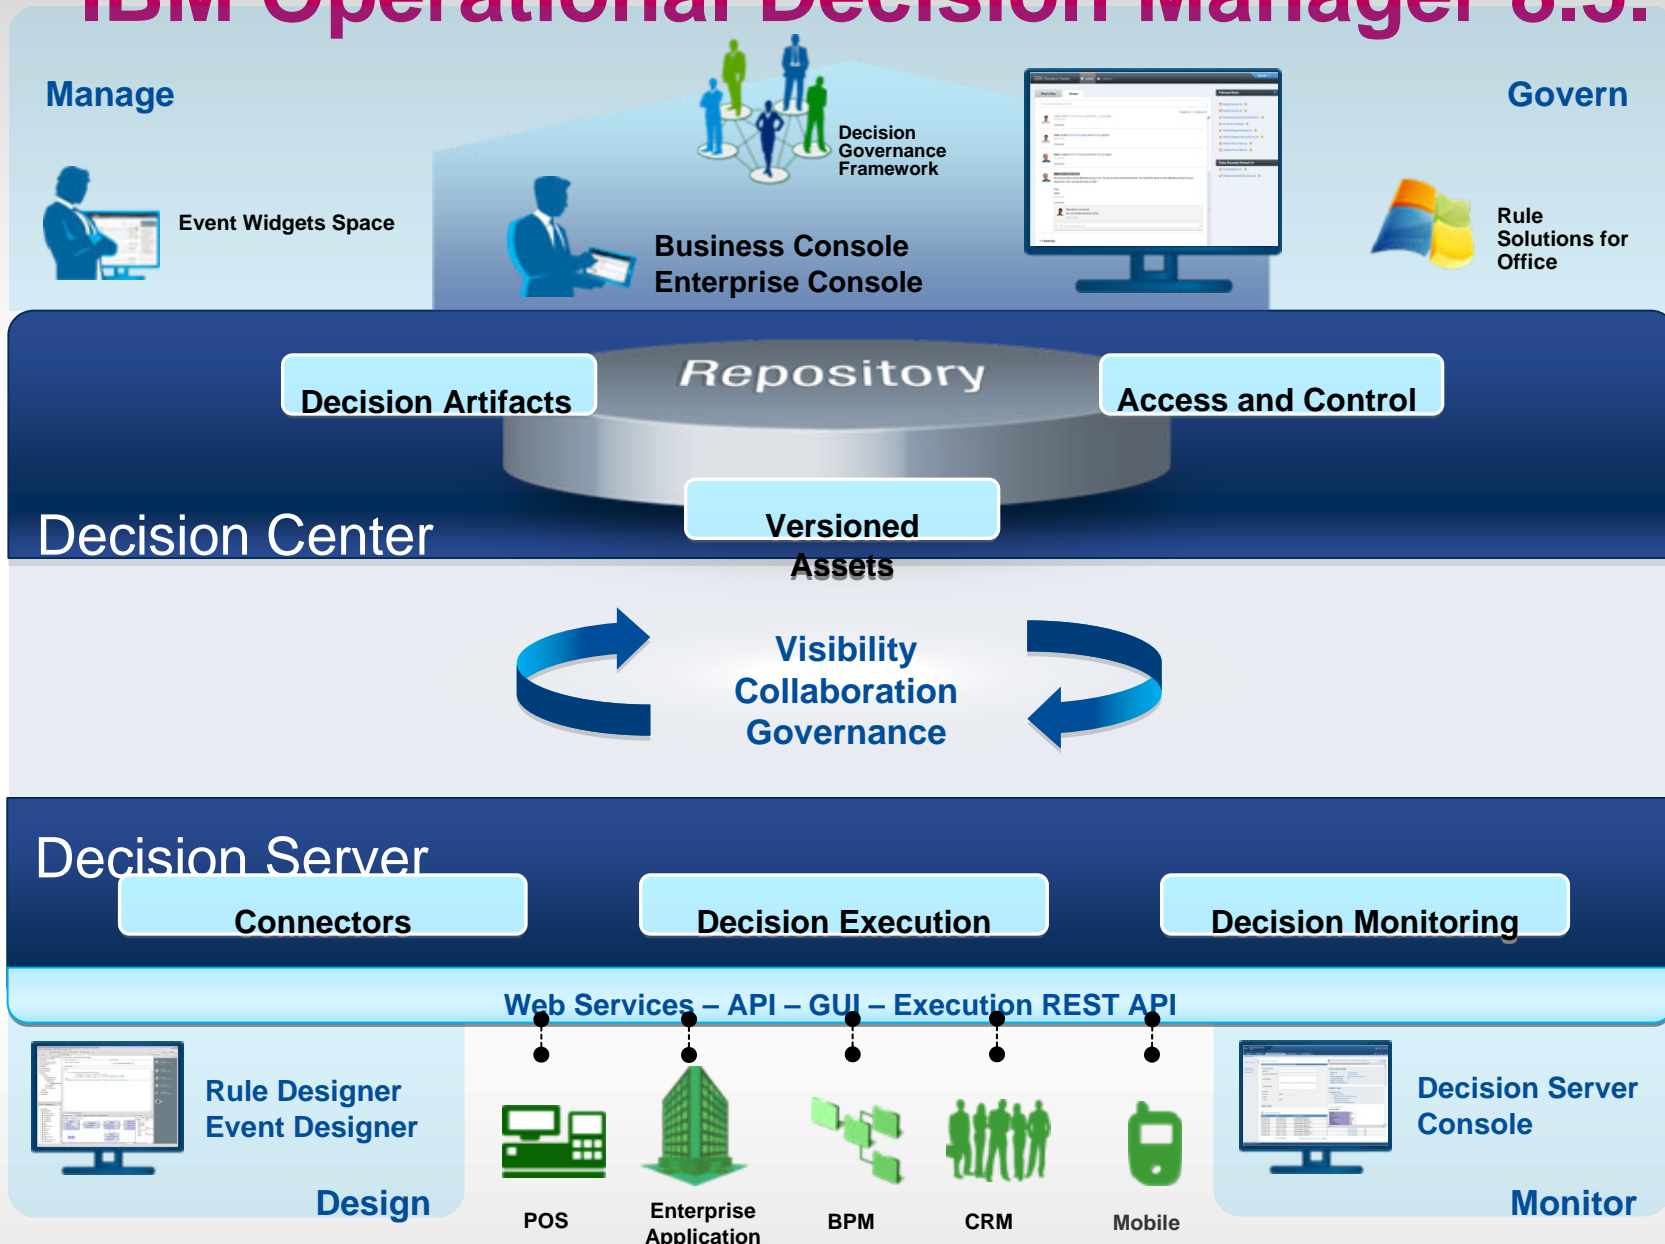

Challenges for Most z Clients

1. Consolidation, Isolation, Extension or Extinction of application portfolio
2. Be able to react to increasing variety and volume of change requests
3. Sharing business rules across platforms & channels
4. Ensuring seamless business experience in migration/ application evolution

Benefits of the ODM Approach

- ✓ **Cost savings**
 - Shorter change cycle, without increased business risk
 - Rule engine processing is zAAP eligible
- ✓ **Improved agility**
 - Improved Time to Market
 - Manage business decisions in natural language
 - Decouple development and business decision change lifecycles
- ✓ **Single version of the Truth**
 - Consolidated and shared expression of business policy
 - Maintainable with a Center of Competency model
- ✓ **Incremental Adoption**
 - Deploy decision methodology one decision at a time
 - Focus on decisions that need to change often & quickly
 - Expand adoption of “market validated” decisions

IBM Operational Decision Manager 8.5.1

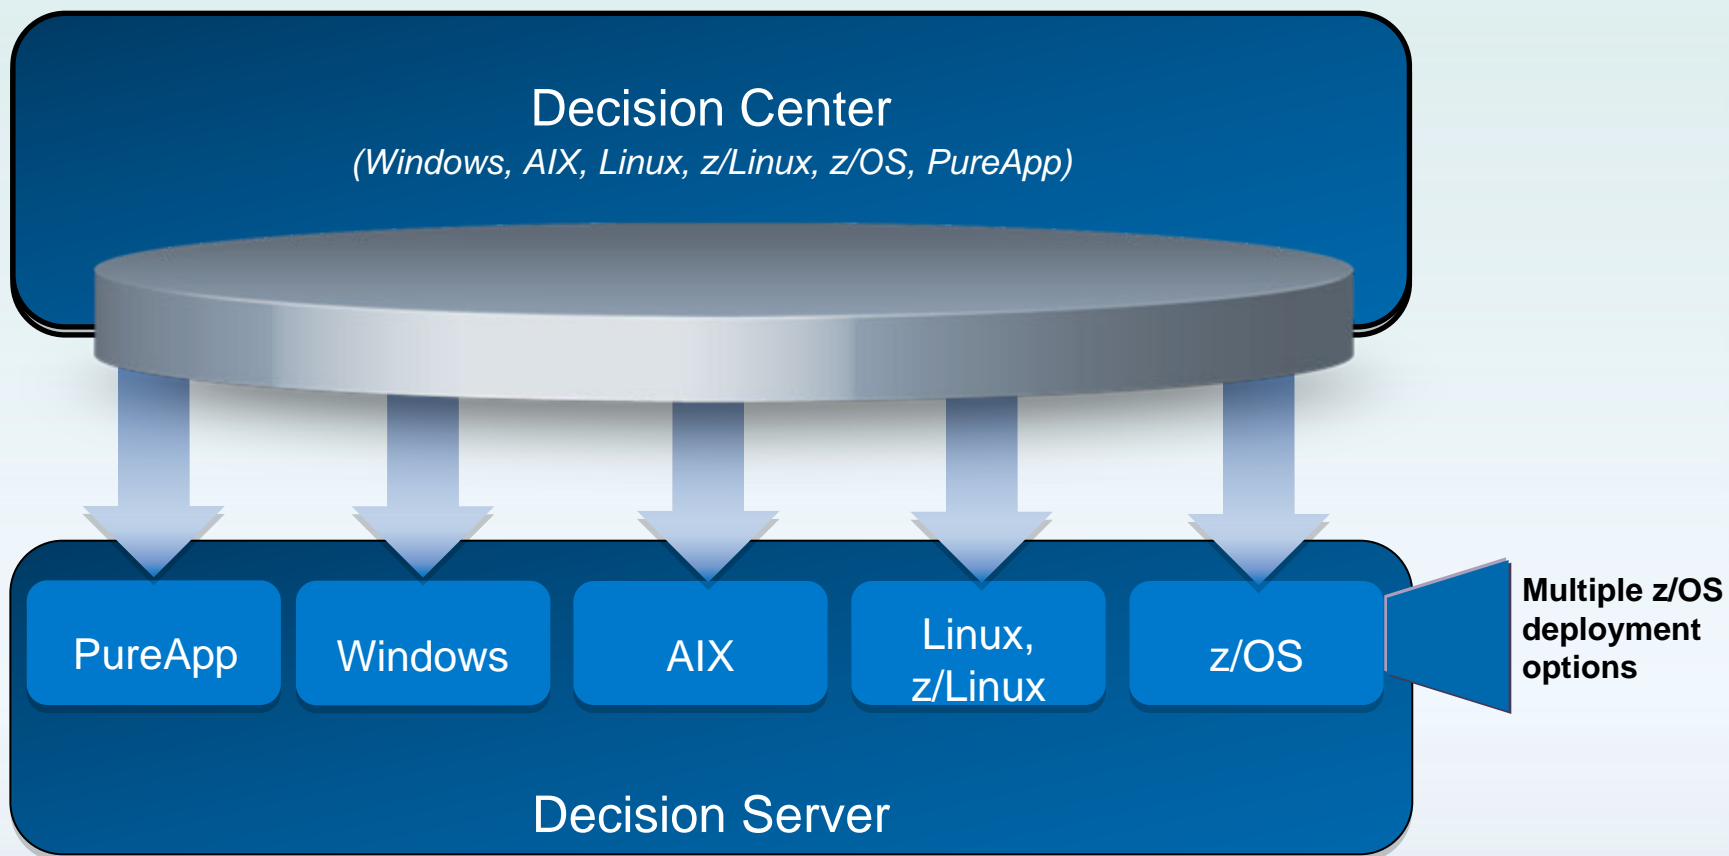

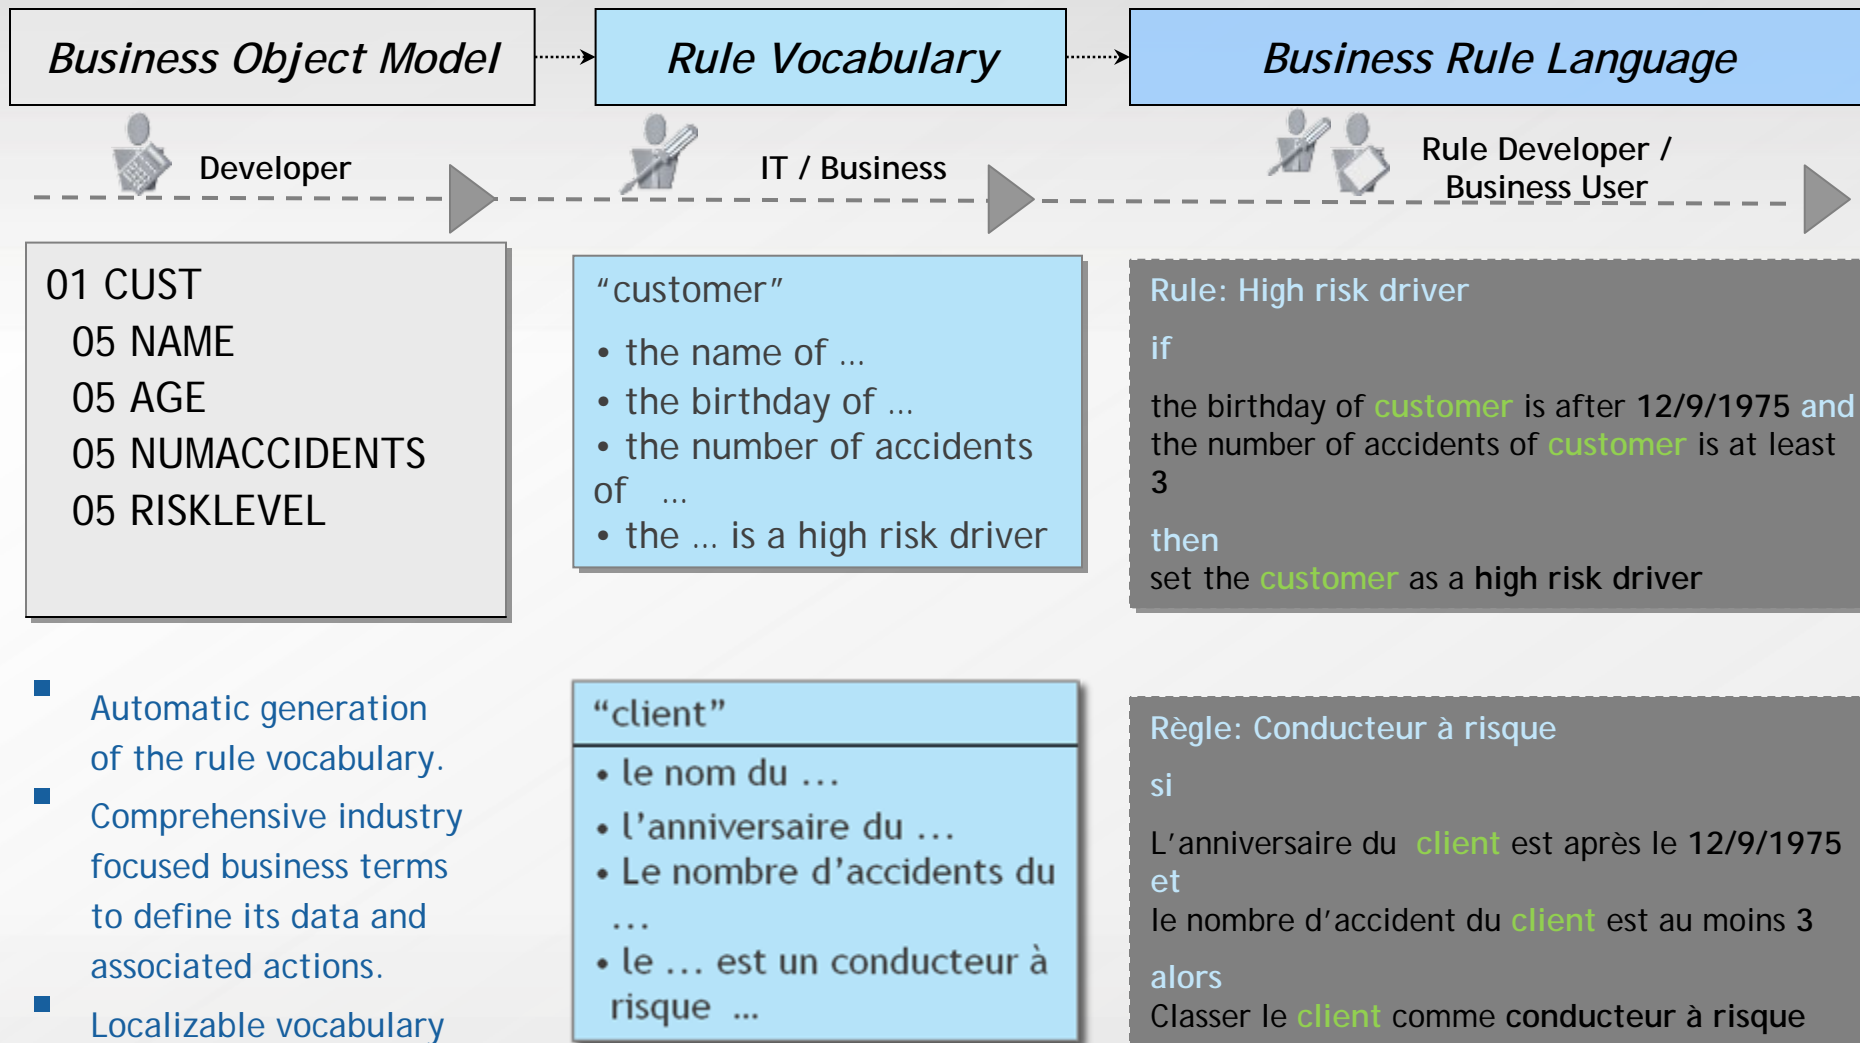

IBM Operational Decision Manager

Runtime support

Leverage a wide range of platforms to meet the varying needs of enterprise architectures

ODM Brings the IT and Business World together

- Automatic generation of the rule vocabulary.
- Comprehensive industry focused business terms to define its data and associated actions.
- Localizable vocabulary

Rule and Event Designer

Comprehensive technical environment

Design

- Rules and events business objects
- Vocabularies
- Projects structure and organization
- Rule Templates

Test

- Step by step debugging
- Value inspectors
- Test and simulation suites
- Completeness reports

Configure

- Business environment (Decision Center)

Deploy

- Rules and events projects to their respective execution environments

The screenshot displays the Rule and Event Designer interface. On the left, a 'Rule Explorer' tree shows a project structure with folders like 'AutoInsuranceQuotingBOM', 'Customer Acquisition Discount', and 'Eligibility'. The main workspace shows a spreadsheet with columns for 'coverage item name', 'coverage type', 'deductible', 'max limit', and 'min limit'. A dropdown menu is open for 'coverage item 1', listing options like 'COLLISION', 'COMPREHENSIVE', 'LIABILITY', 'MECHANICAL_BREAK', and 'UNINSURED_BOD_IPH'. In the foreground, an 'Import XOM' dialog box is open, with 'COBOL execution' selected. To the right, a 'Rule Completeness Report' is displayed, detailing gaps found in the rules and providing a missing rule definition for a specific rule task.

Import XOM

Import Execution Environment

Java execution
 Dynamic execution
 COBOL execution
 PL/I execution

Rule Completeness Report

Report for Project: 'loanvalidation-rules' - Baseline: 'Current' generated on Jan 28, 2010 2:21:15 PM

Gaps found in the selected rules. Here are the rules you could create in order to fill them

Note: Not all missing rules may be relevant for your project. In some cases, although there are situations not handled by rules, the cases may not apply to your application

The following rule fills a gap which occurs in specific ruleflow tasks:

In order to close the gap, each rule must be included in the ruleflow task(s) listed. To do this, place the rule in a folder referenced by the ruleflow task. Some ruleflow tasks must be updated in Rule Studio to ensure the correct rules and folders are included

Missing rule 1

The following rule fills a gap which occurs in the ruleflow task 'validator' in ruleflow 'loanvalidation'

```

if
  the amount of 'the loan' is less than 1000000
  and the age of 'the borrower' is at least 0
  and the age of 'the borrower' is at most 100
  and the last name of 'the borrower' is not null
  and the length of the last name of 'the borrower' is not 0
  and the area number of the SSN of 'the borrower' is not one of ("000", "444")
  and the length of the SSN of 'the borrower' is 9
  and the length of the SSN of 'the borrower' contains only digits
  and the length of the group code of the SSN of 'the borrower' is 1
  and the group code of the SSN of 'the borrower' contains only digits
  and the length of the serial number of the SSN of 'the borrower' is 4
  and the serial number of the SSN of 'the borrower' contains only digits
  and the zip code of the address of 'the borrower' is not null
  and the length of the zip code of the address of 'the borrower' is 5
then
  ...
  
```

OK Cancel

Decision Tables

	Grade	Amount of loan		Insurance required	Insurance rate
		Min	Max		
0	A	< 100,000		false	∅
1		100,000	300,000	true	0.001
2		300,000	600,000	true	0.003
3		≥ 600,000		true	0.005
4	B	< 100,000		false	∅
5		100,000	300,001	true	0.0025
6		300,000	600,000	true	0.005
7		≥ 600,000		true	0.0075
8	C	< 100,000		true	0.0035
9		100,000	300,000	true	0.006
10		300,000	600,000	true	0.0085
11		≥ 600,000		true	0.0145
12	Otherwise			true	0.022

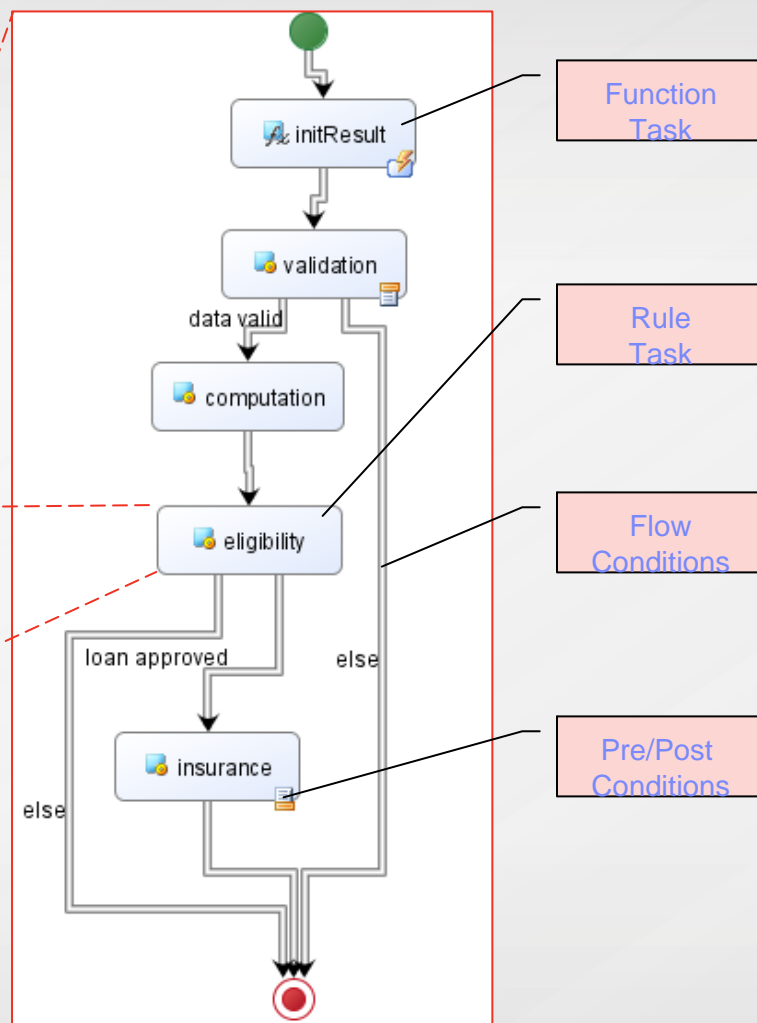

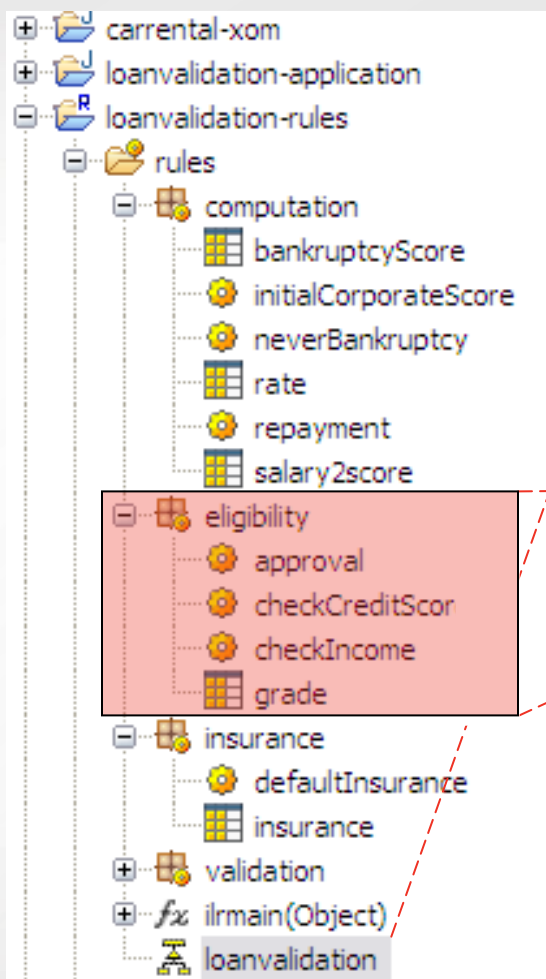

Built-in Gap/Overlap checking

Actions

Automatic Rule generation

if
all of the following conditions are true :
 - the loan grade in 'the loan report' is "C"
 - the amount of 'the loan' is at least 600000 ,
then
 set insurance required in 'the loan report' to true ;
 set the insurance rate in 'the loan report' to 0.0145 ;

Flow Conditions

Pre/Post Conditions

Decision Center - Enterprise Console

Web-based Event and Rule Maintenance

- Access rule artifacts concurrently without conflict or delay
- Represent complex policies using rule overrides and hierarchies
- Take control of very large rulebases with Smart Views, easy search and reporting
- Get automatic notification of potential rule conflicts, redundancies
- See where rules are used across projects using queries
- Hot-deploy rule and event changes in minutes
- Secure, integrated with enterprise security facility including single sign-on
- Multiple release management supporting diff and merge

The screenshot shows the IBM Decision Center interface for configuring a rule. The breadcrumb path is: Business Rules > Pricing > Coverage Pricing > Base Premium > Collision. The main table lists rule artifacts with columns for Actions, Name, Status, Priority, Last Changed By, and Last Changed On. A 'Collision Price Table' is shown as 'Deployable'. Below, a 'Decision Table Preview' shows a table with columns for Vehicle Value (Lower, Upper), Deductible, and Base Premium, with rows of numerical values.

The screenshot shows the IBM Decision Center interface for simulation and reporting. The breadcrumb path is: Explore > Details > Run > Report > Compare with... > Compare Reports. The page is titled 'Eligibility - Last year history - all rules (Simulation)'. It displays two simulation reports side-by-side. Each report includes a 'Summary' section with 'Number of scenarios' (400) and 'Success Rate' (100%). Below the summary are 'Key Performance Indicators' and 'Global eligibility results' shown as pie charts. The first report shows 77.0% Accepted and 23.0% Rejected. The second report shows 82.0% Accepted and 18.0% Rejected. At the bottom, 'Eligibility results by states' are shown as bar charts for CA, NJ, and MA, with values like 81.8% for CA in the first report.

Decision Center – Business Console

Social Media Style Collaboration

- Built-in Decision Governance Framework methodology
- Maintain awareness across the team
- Ensure automatic notifications of changes
- Ensure team collaboration

The screenshot shows the 'What's New' stream in the IBM Decision Center Business Console. It features a 'Stream' tab and a 'Followed Rules' sidebar. The main content area is divided into three sections: 'New Business Rules', 'New Updates on Followed Rules', and 'New Comments in Activity Stream'. The 'New Business Rules' section lists items like 'An oil car surcharge' and 'Application Promotion for NJ'. The 'New Updates on Followed Rules' section lists updates for various price tables and discounts. The 'New Comments in Activity Stream' section shows user comments, such as 'Rachel created a new post' and 'Adam created a new post', with details about rule changes and user avatars.

The screenshot shows a 'Comprehensive Price Table' comparison between version 3.0 and version 10.0 (current). The table is titled 'Comprehensive Price Table' and has a 'Patch the pricing policy' button. It displays a summary of changes and a detailed comparison of the two versions. The table has columns for 'Vehicle Value', 'Deductible', and 'Base Premium'. The 'version 3.0' table is on the left, and the 'version 10.0 (current)' table is on the right. The 'version 10.0 (current)' table has a 'Patch' button next to it.

Vehicle Value	Deductible	Base Premium
1 \$ 0. \$ 5,000	\$250	\$43
2 \$ 0. \$ 5,000	\$500	\$40
3 \$ 0. \$ 5,000	\$1000	\$28
4 5,000. \$ 10,000	\$250	\$48
5 5,000. \$ 10,000	\$500	\$42
6 5,000. \$ 10,000	\$1000	\$33
7 10,000. \$ 20,000	\$250	\$52
8 10,000. \$ 20,000	\$500	\$45

Vehicle Value	Deductible	Base Premium
1 \$ 0. \$ 5,000	\$250	\$53
2 \$ 0. \$ 5,000	\$500	\$50
3 \$ 0. \$ 5,000	\$1000	\$38
4 0. \$ 10,000	\$250	\$48
5 0. \$ 10,000	\$500	\$42
6 0. \$ 10,000	\$1000	\$33
7 0. \$ 20,000	\$250	\$52
8 0. \$ 20,000	\$500	\$45

Decision Governance Framework

All Changes and Deployments Relate to a Specific Release
Release is In Progress

Release objectives are documented

Release has

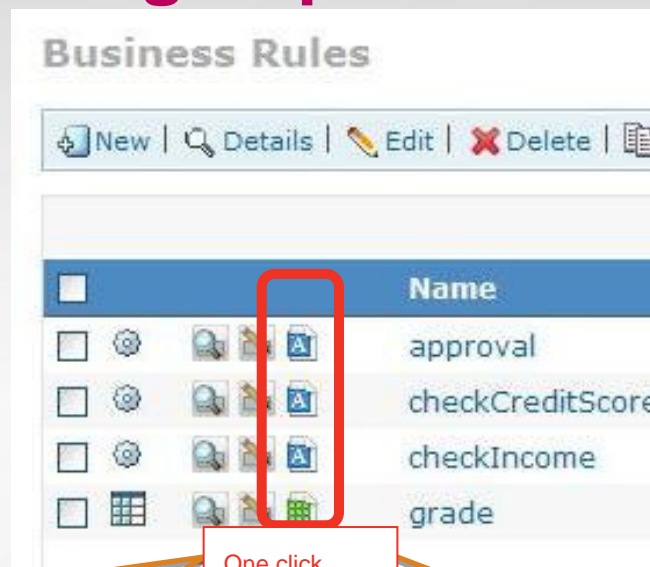

- A due date
- A status
- An owner

To complete, a Release must be reviewed and approved

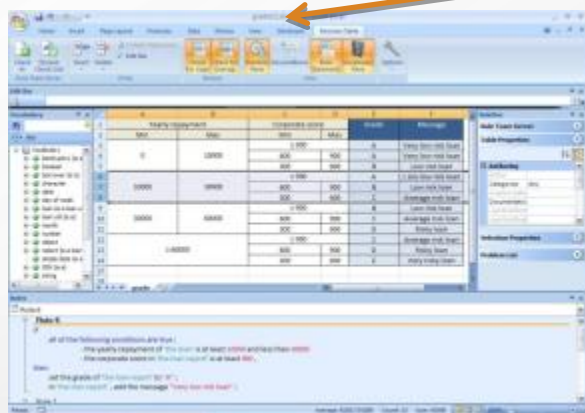

Rule management activities occur in the context of a release

Extended Rule Authoring Experience

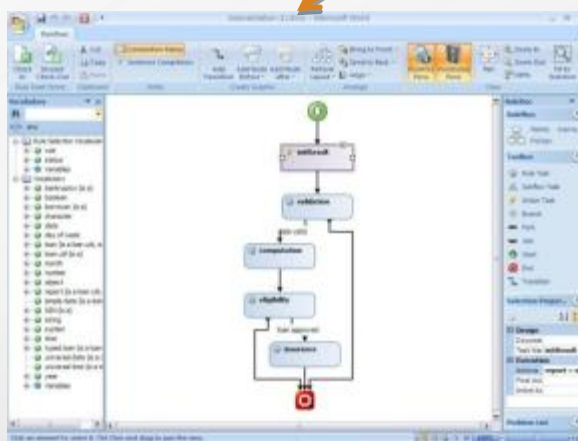

- Direct access to MS editing
- Ruleflow editing thru Word
- Automatic synchronization
- Automatic lock of edited elements

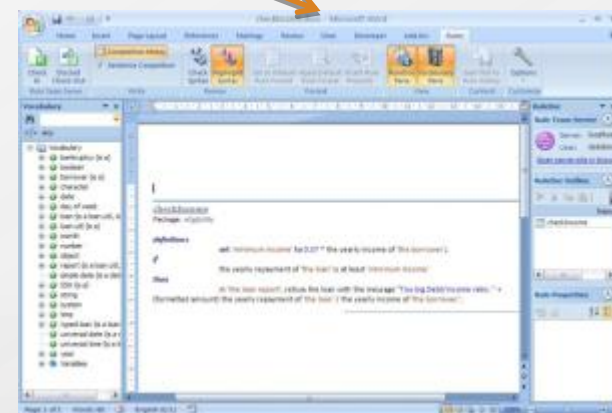

One click

Decision Table in MS Excel

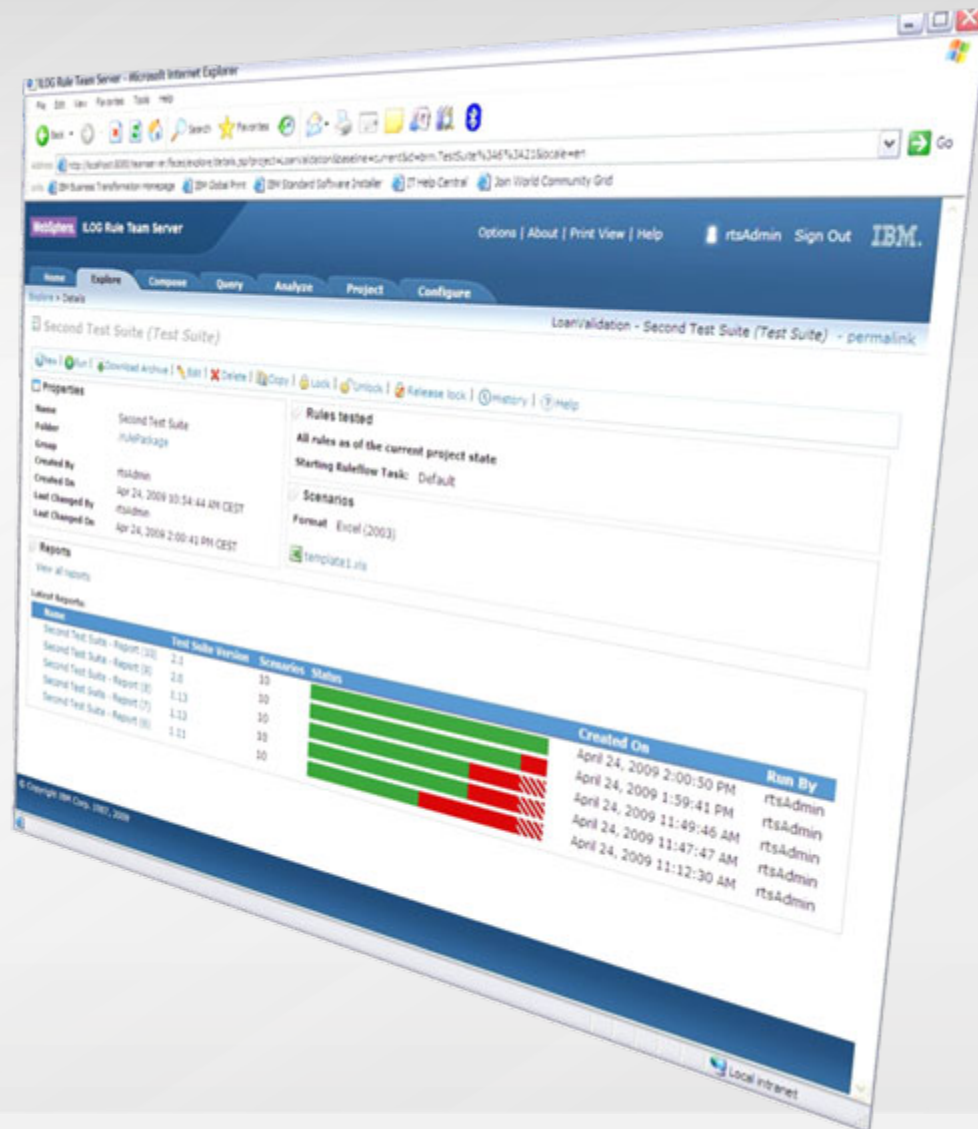

Rule Flow in MS Word

Action rules in MS Word

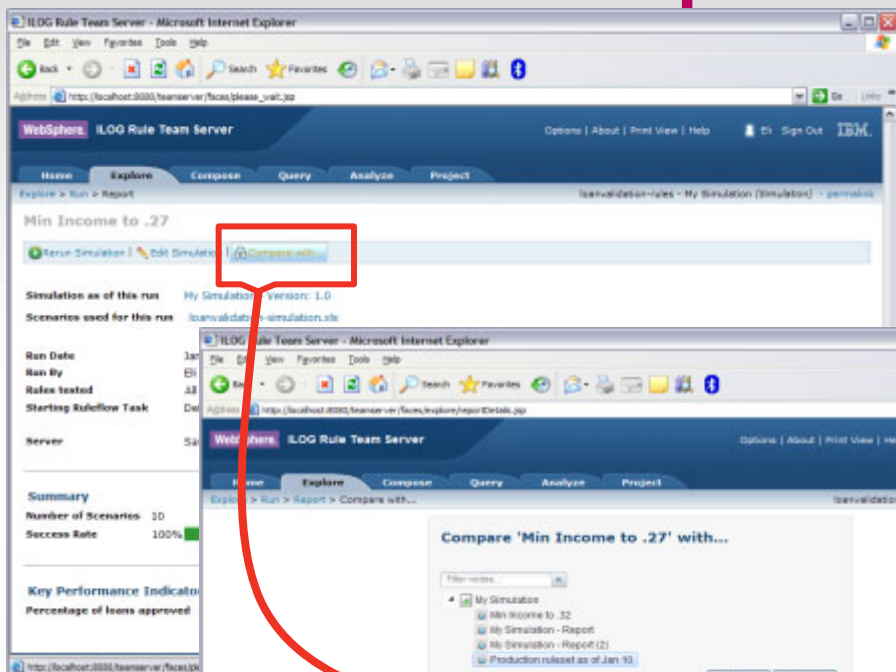

Testing and Simulation

- The feature formally know as Decision Validation Services
- Functionality Overview
 - Out-of-the-box ruleset testing in Decision Center
 - Business impact simulation in Decision Center
 - Scenario configuration and customization in Rule Studio
 - Audit - Decision Warehouse in Rule Execution Server

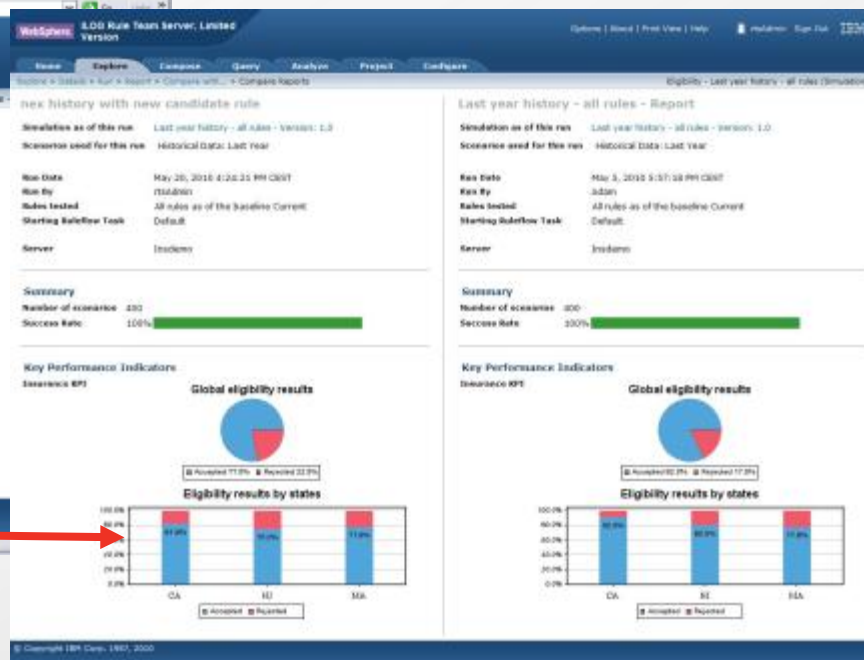

Simulation Capabilities

- Test suite comparison
- Simulation suite comparison
- Champion and challenger scenario
- Allows what if analysis

Side by side comparison

Today

Tomorrow

Rule Execution Server Options on z/OS

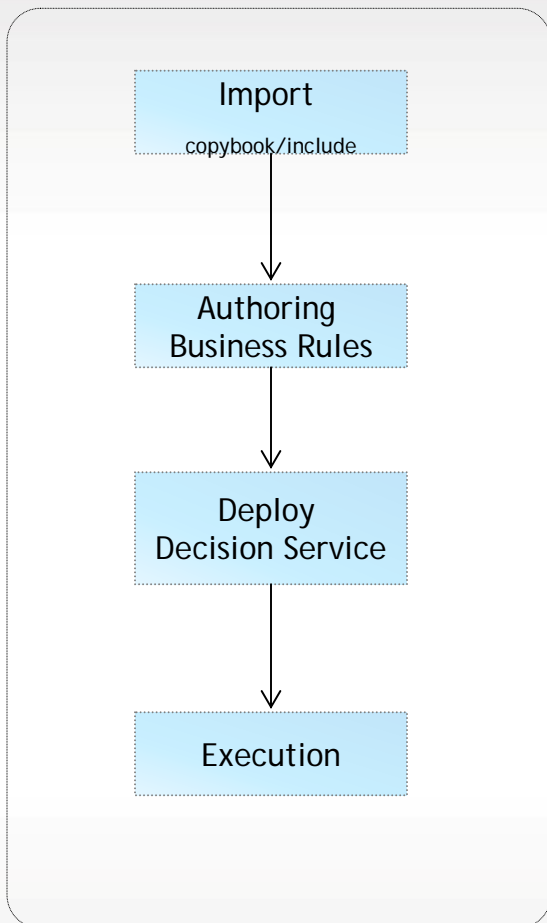

Decision Server Runtime Options

- Decisions can be invoked from existing CICS, batch and IMS applications
- Runtime support for COBOL and PL/I data types
- Flexible runtime deployment to fit any z/OS environment:
 - Deployed on WebSphere Application Server for z/OS
 - Deployed standalone to z/OS
 - Deployed in CICS TS 4.2 and above JVMServer environment

* limited use entitlement included with Decision Server

Starting from a COBOL copybook or PL/I Include

Scenario

- Existing application containing business rules
- Data model defined in COBOL copybook or PL/I Include file
- Use ODM to modernize the business policy

Benefits

- Modernize business policies in ODM
- Rules can be invoked 'naturally' from existing application
- Business policy/rule lifecycle detached from application lifecycle

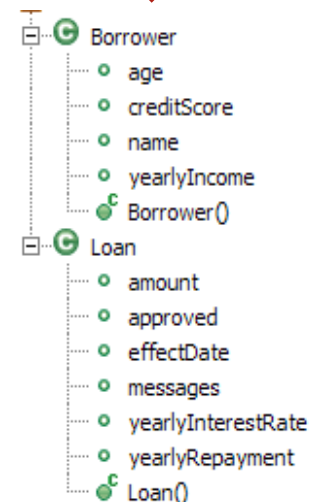

Note: The PL/I Include to XOM tooling is not available until V8.5

Rule Authoring COBOL & PL/I -> XOM

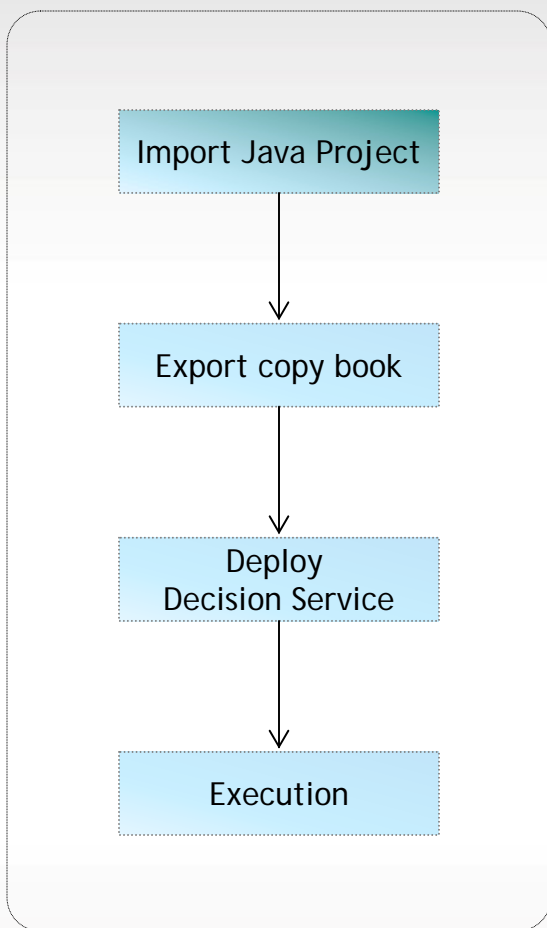

- Support Enterprise COBOL & PL/I
- Java is created from the copybook or include structure
 - Java XOM & Java code to marshal between COBOL or PL/I <-> Java
 - 01 level structures mapped to class in BOM
- Redefines statements supported
 - Select which redefines structure to import

```

01 Borrower.
05 name          PIC X(20).
05 creditScore   PIC S9(10).
05 yearlyIncome  PIC 9(10).
05 age           PIC 9(3).
01 Loan.
05 amount        PIC 9(10).
05 yearlyInterestRate PIC 99.
05 yearlyRepayment PIC 9(10).
05 effectDate    PIC X(8).
05 approved      PIC X.
05 messageCount  PIC 9(2).
05 messages      PIC X(60)
                  OCCURS 0 TO 99 TIMES
                  DEPENDING ON messageCount.
  
```

Starting With an Existing Java Project

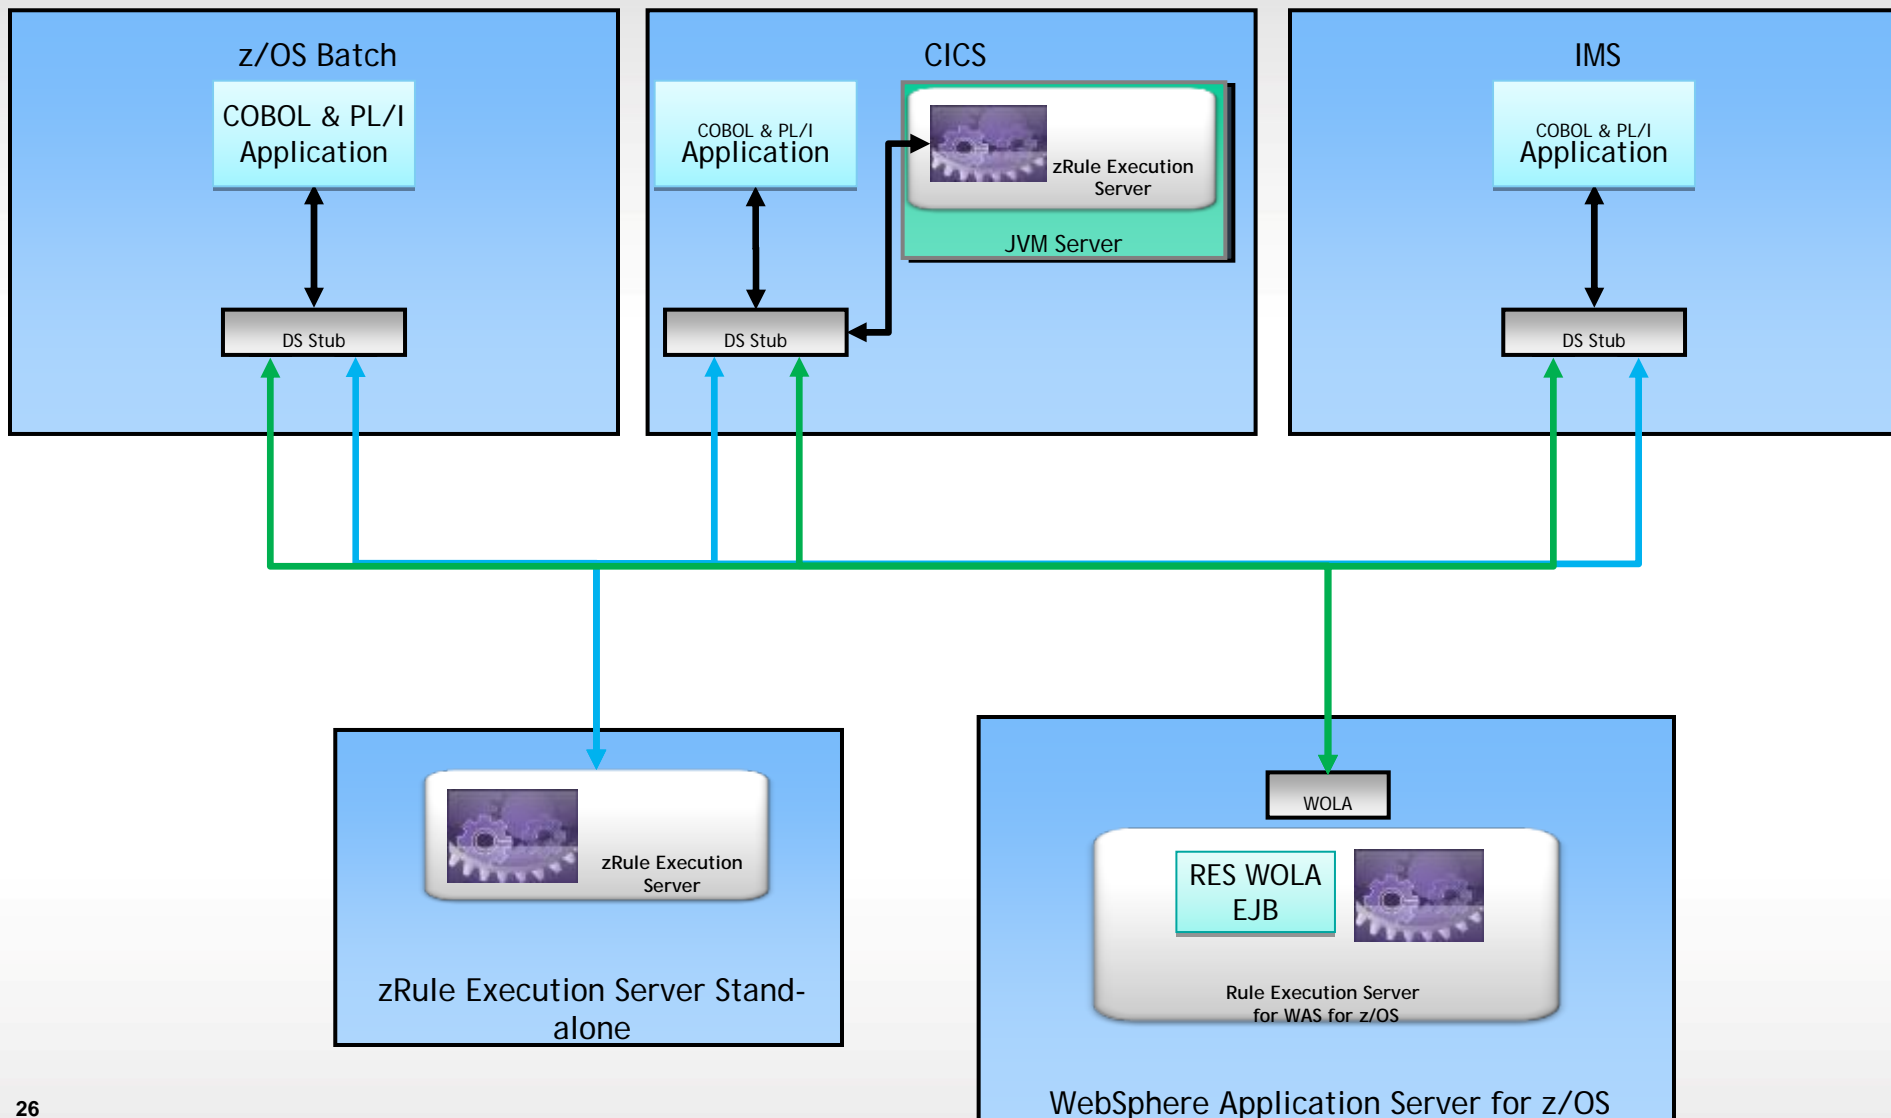

Scenario

- Existing Rule projects exist that are currently in use on distributed platforms
- Concurrent execution of rules required on z/OS from COBOL applications

Benefits

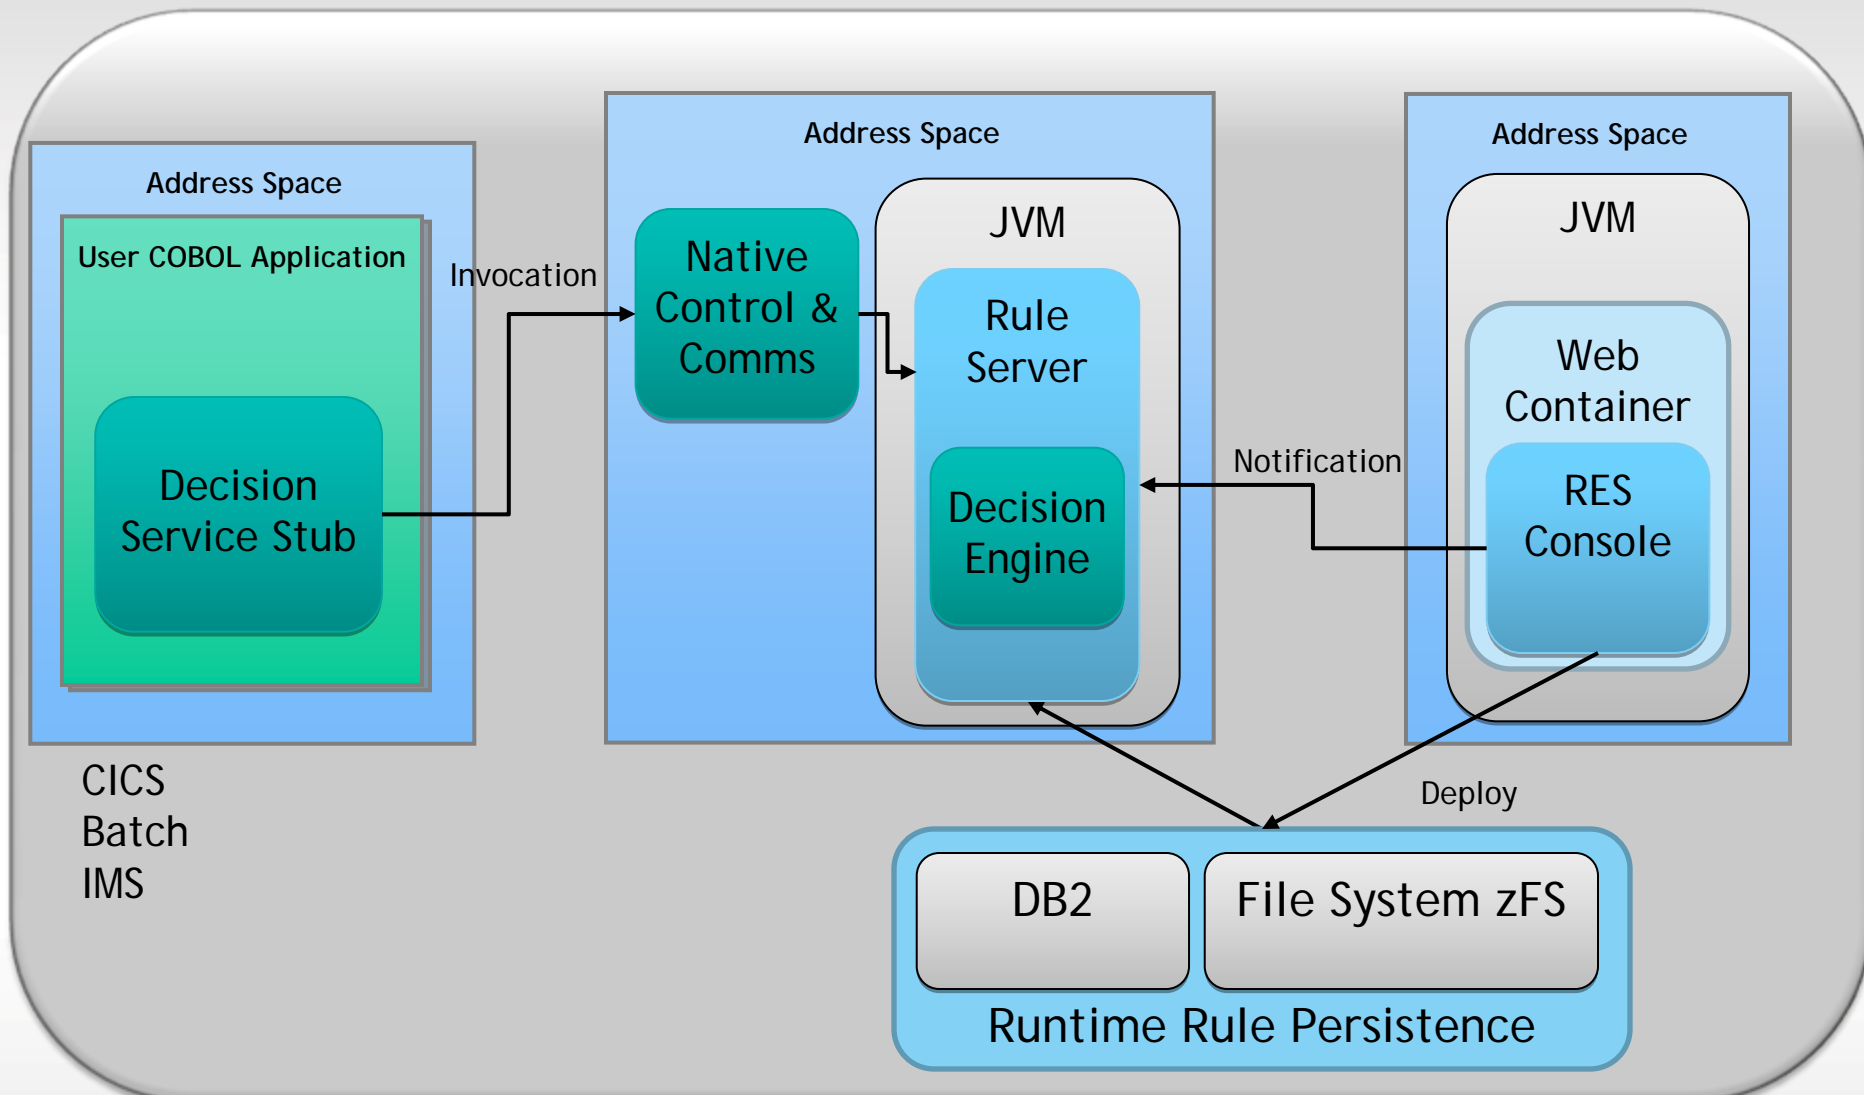

- Consistent decision rules where ever executed
- Rules can be invoked 'naturally' from existing applications on all platforms
- Enables central rule management across System z and distributed execution
- Business policy/rule lifecycle detached from application lifecycle

Decision Invocation Options on z/OS

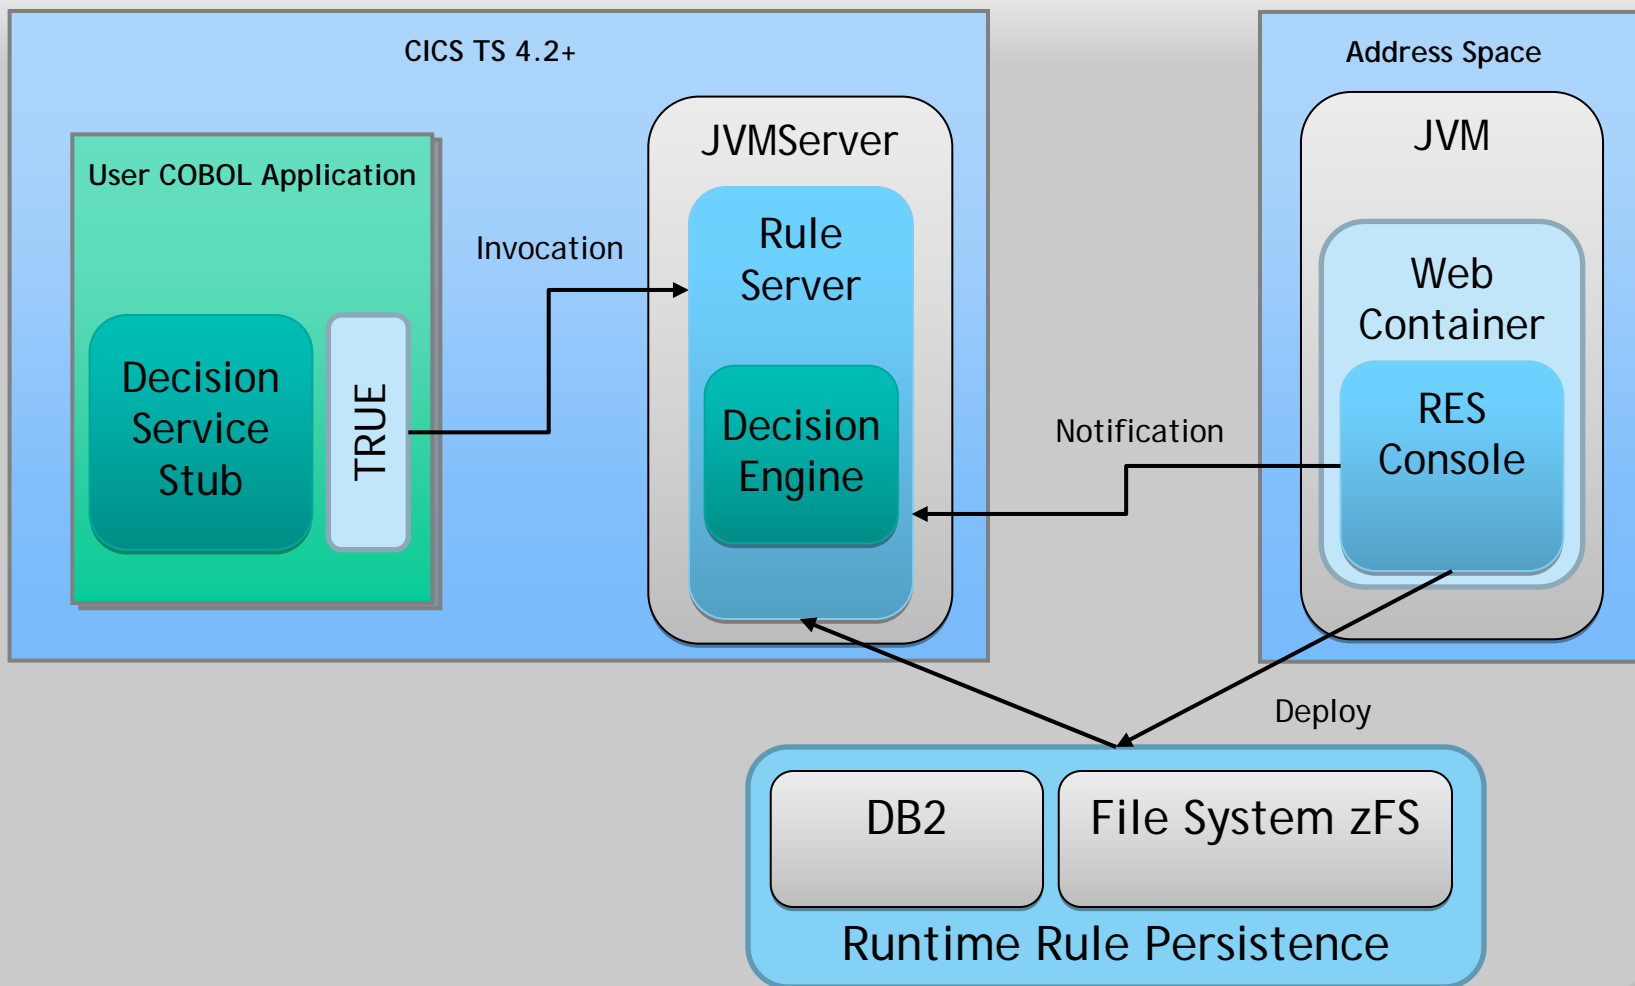

zRule Execution Server – Stand Alone

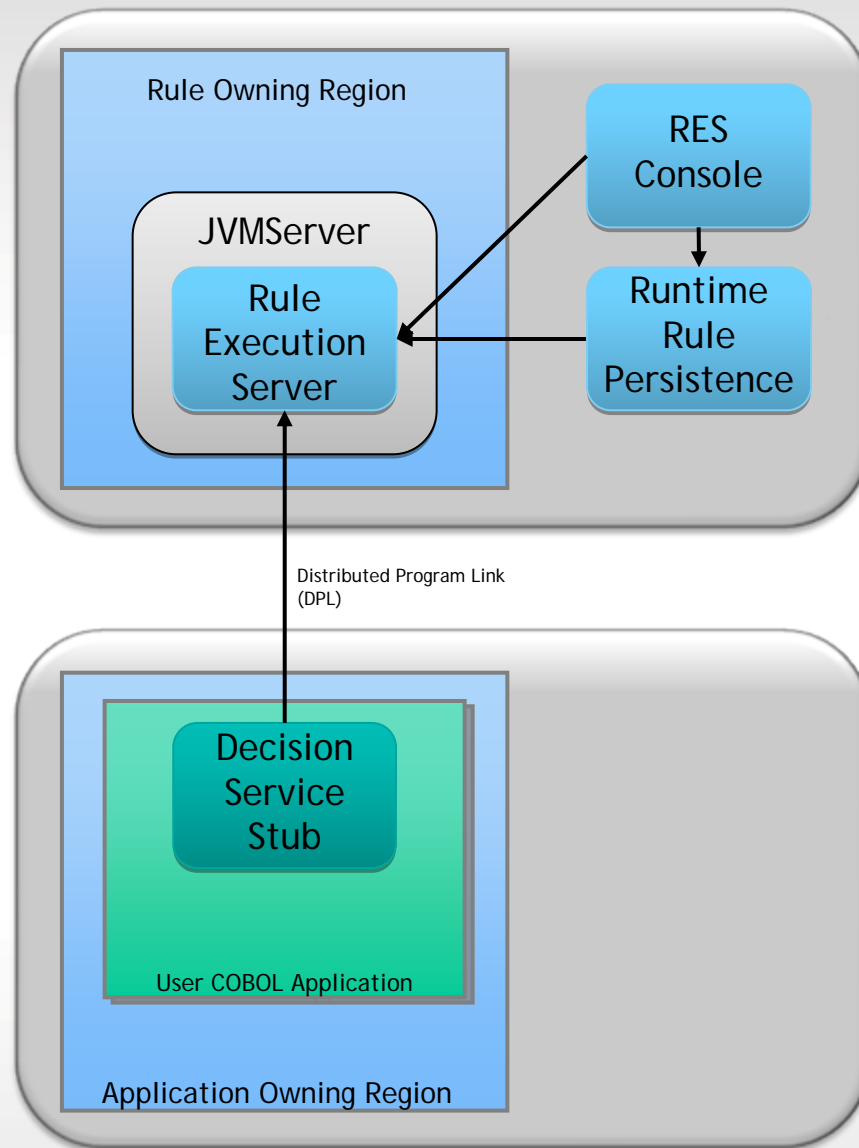

zRule Execution Server for z/OS – CICS 4.2 & 5.1

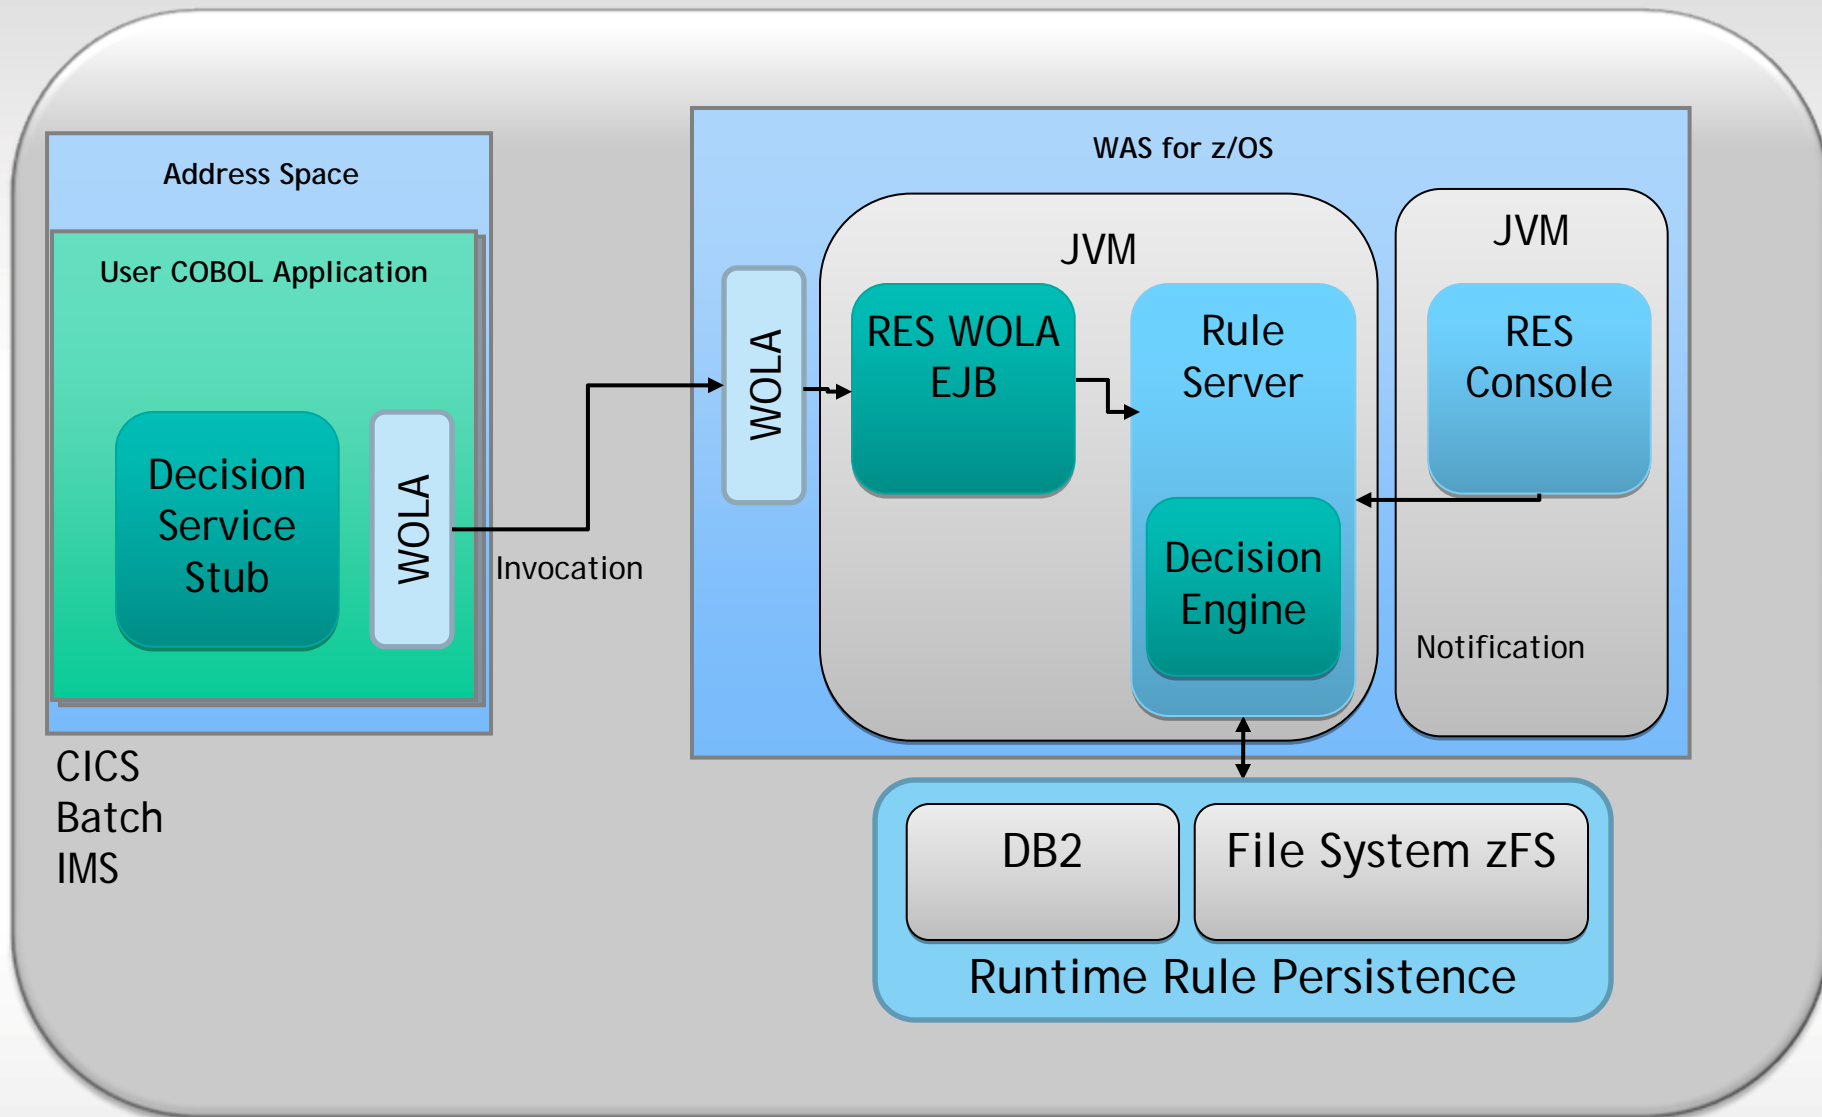

CICS Rule-Owning Regions (ROR)

- A CICS rule-owning region allows centrally hosted rules to be called by multiple CICS regions
- The rule-owning region hosts a zRule Execution Server for z/OS instance that runs locally in the CICS JVM server.
- The application-owning region uses a CICS Distributed Program Link (DPL) to run rules in a rule-owning region
- CICS DPL supports the ability for CICS to work load balance by having multiple rule-owning regions

zRule Execution Server for z/OS for WAS on z/OS

New Decision Engine Support

- **Increased Performance**
 - More transactions per seconds (up to +60% for very big projects)
 - Reduced ruleset loading time (up to 17 times)
- **Enhanced Scalability**
 - Ability to better leverage technical resources
 - Decisions can now involve thousands of rules with confidence and performance
- **Reduced Consumption**
 - Requires less memory even for big rulesets
 - Up to 30 times less memory required in very large decisions
- **Compatibility**
 - Decision Engine is compatible with existing rulesets
 - Classical rule engine remains the default execution engine

Disclaimer: All figures measured during IBM internal benchmarks made on June 2013 comparing v8.0 legacy engine with the new v8.5.1 Decision Engine installed on similar configurations. Figures are for information purpose only and are not contractual.

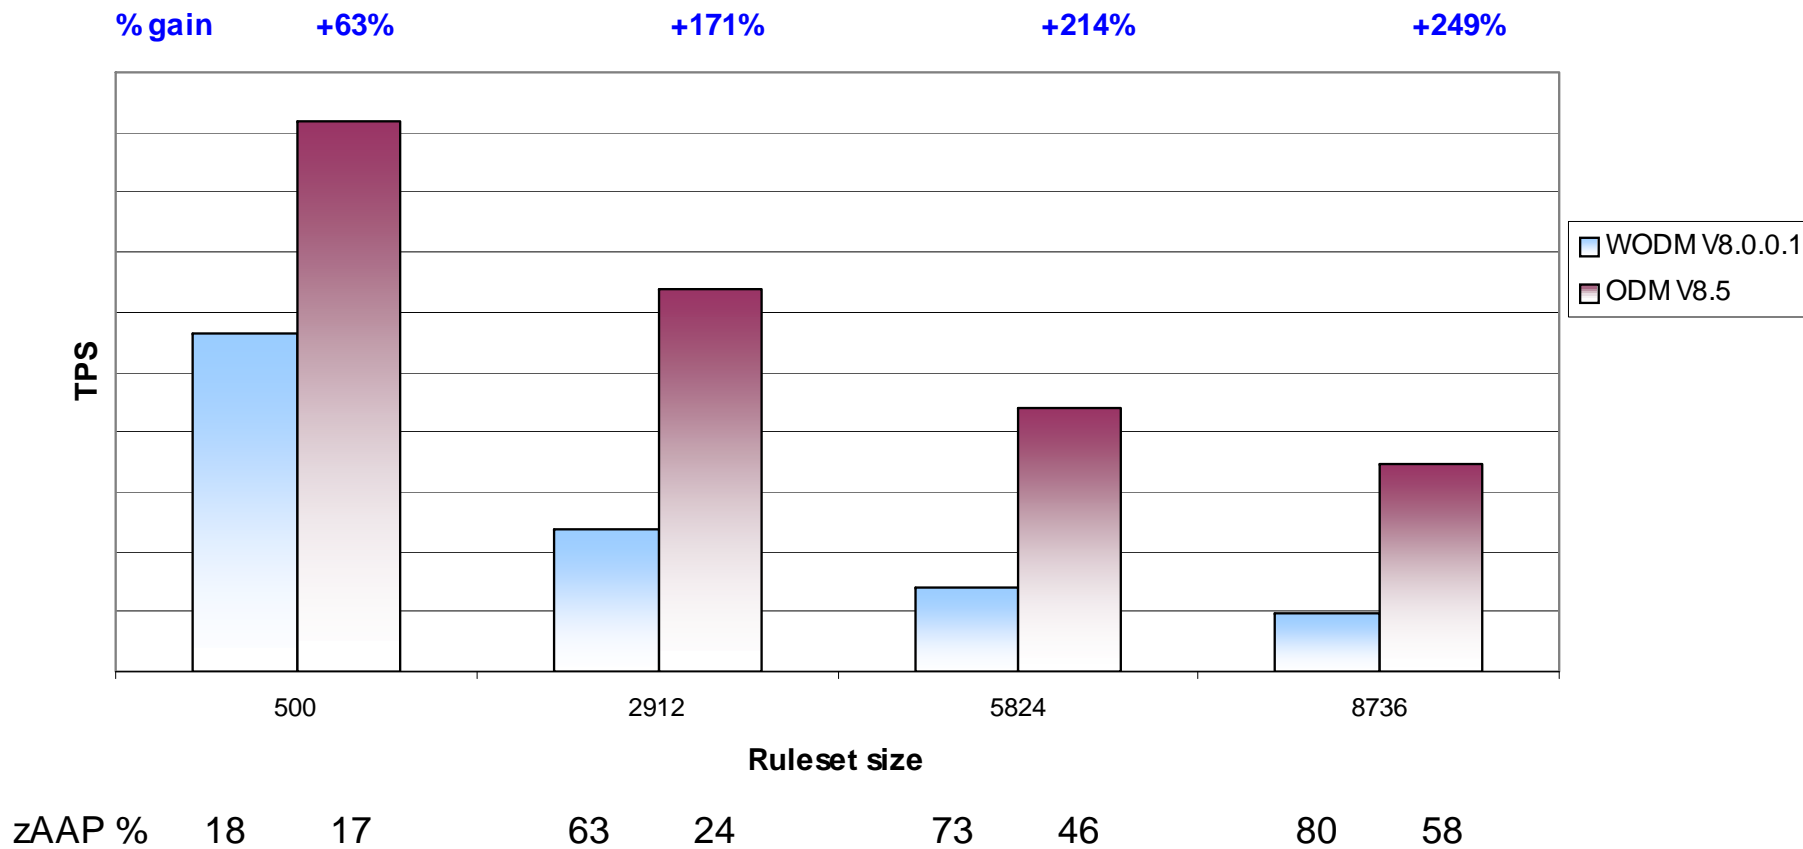

Decision Engine z/OS Performance Highlights

- zRES Stand Alone
 - The examples have shown throughput increased 103% - 348%
- zRES memory requirement significantly reduced
 - The examples have shown all performance benchmarks were able to run in 32MB heap
- zRES on CICS
 - The examples have shown throughput increased 25% - 253%
- In test runs we have achieved 27,424 rule invocations per second
 - 4 CPU EC12 (500 rule ruleset, using fastpath algorithm)

Decision Engine z/OS Performance Highlights

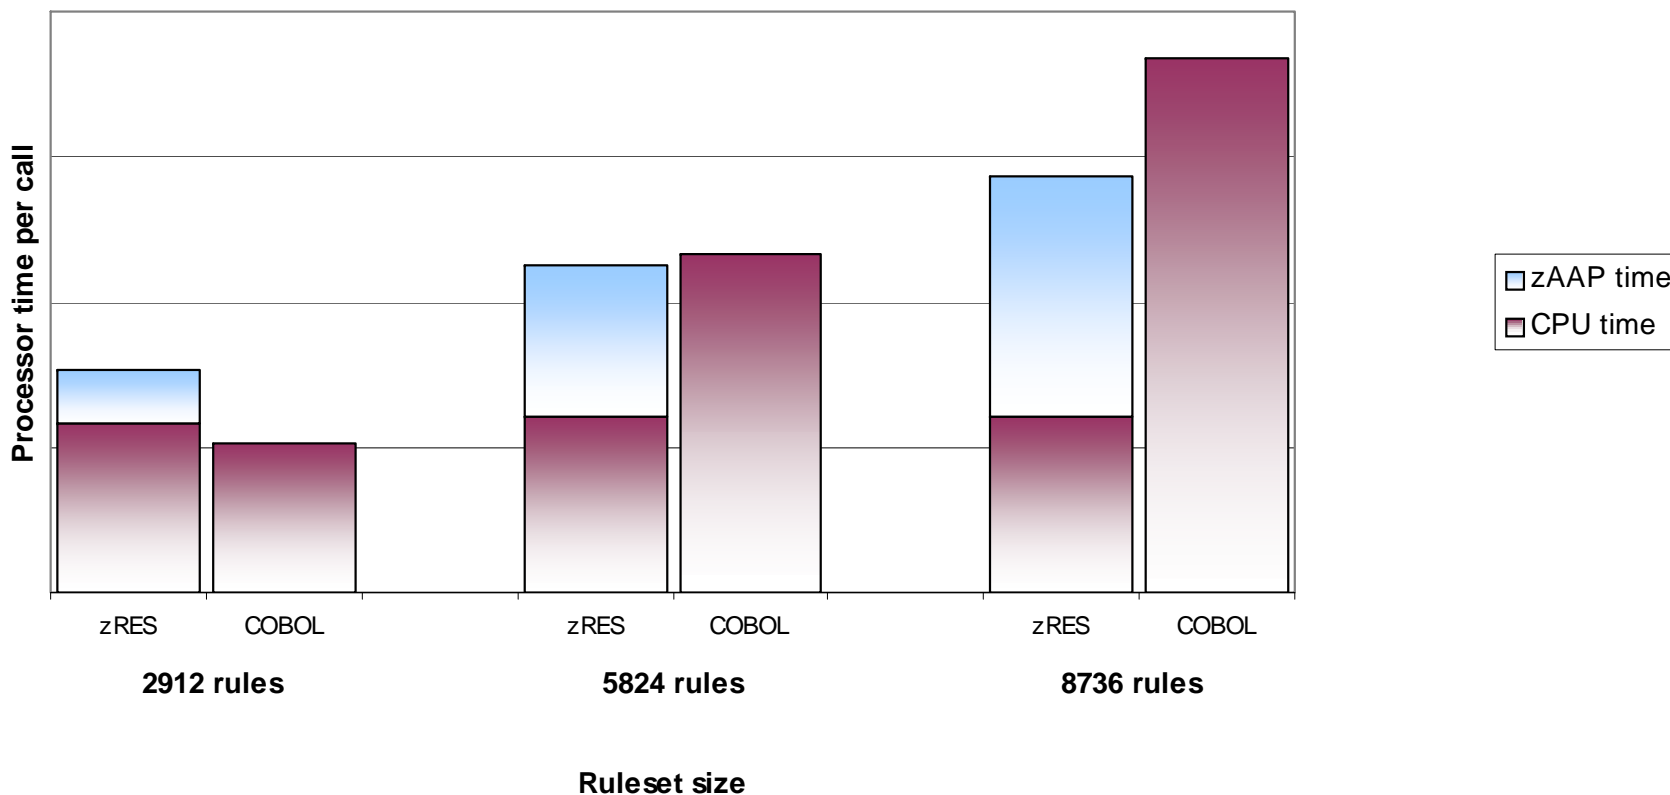

zRES performance V8.0.0.1 Vs V8.5

Decision Engine z/OS Performance Highlights

Comparison of zRES execution with a
COBOL rule subprogram
CPU/zAAP time

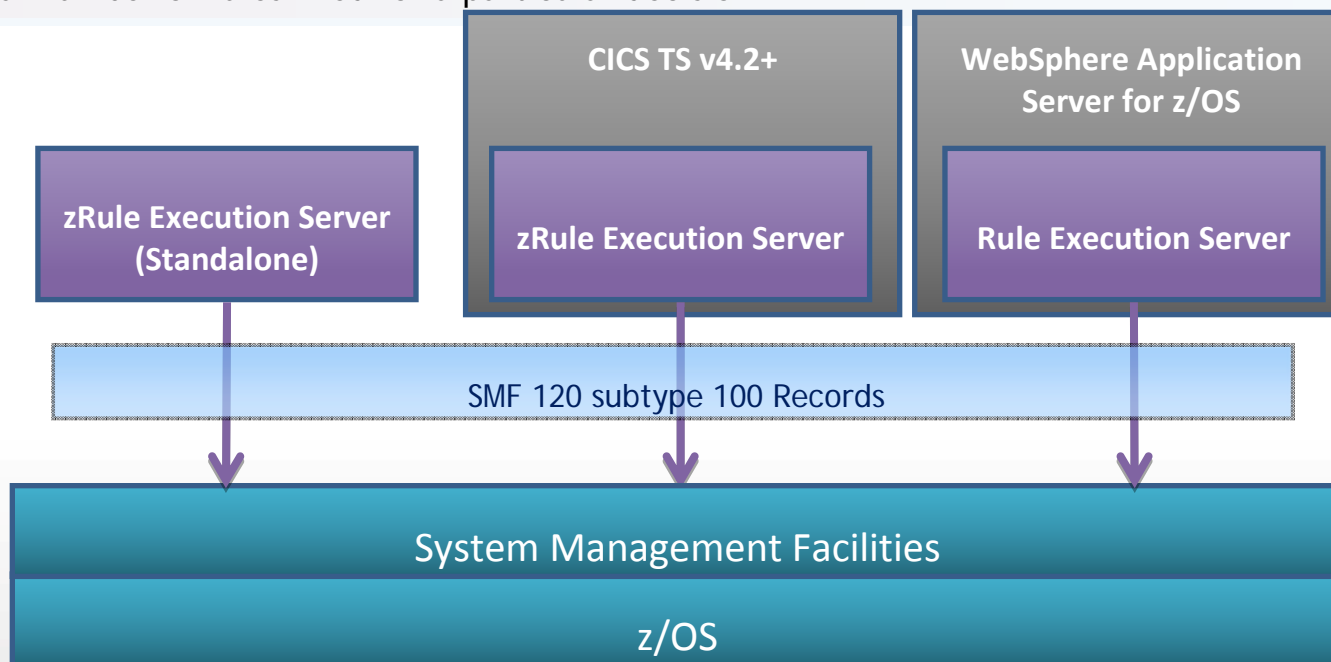

Decision Engine Feature Comparison

	Supported Features		
	Rule Classic Engine	Decision Engine v8.0.1	Decision Engine v8.5.1
Available for zRES stand alone and CICS deployments	✓	✓	✓
Available for RES in WebSphere AS for z/OS deployments	✓		✓
Develop Rule Projects in Rule Designer	✓	✓	✓
Testing and simulation support	✓	★	★
Support for Web Service invocation (HTDS & MTDS)	✓		✓
Integration with Decision Center business tooling	✓		✓
Build and deploy rulesets from Decision Center	✓		✓
Decision Warehousing rule auditing support	✓		✓
Remote and local debugging of ruleset execution	✓		✓
Full support for low level programming in native IRL	✓		

★ Testing converts ruleset back to Classic engine support.
Decision engine architected to give same results as Classic engine

Monitoring Decision Execution

- Decisions monitoring can be enabled all z/OS environments including:
 - zRule Execution Server stand alone deployments
 - zRule Execution Servers deployed in a CICS TS Environment
 - Rule Execution Servers deployed in a WebSphere Application Server for z/OS
- Usage records written as standard z/OS SMF 120 subtype 100 records
- Can be used to track
 - Number of times a particular decision is invoked
 - Total number of rules fired for a particular decision

ODM execution data – SMF 120 Subtype 100 structure

- Each record contains
 - Standard SMF Header
 - ODM Header
 - Zero to many Execution Segments Records
- Execution segment record contains data collected for each decision defined by a unique ruleset path
 - E.g. /MiniLoanDemoRuleApp/1.0/MiniLoanDemo/2.0

- The SMF record structures are provided as a sample with ODM 8.5.1
 - ++HBRHLQ++.SHBRXLCH(HBRSMF)

Execution Segment Layout

- One segment is created for each unique ruleset path
 - Decision must have been invoked during the interval
- Contains
 - The unique ruleset path that identifies the decision
 - The number of times the decision has been successfully

```
typedef struct {  
    uint32_t RULEXNUM;    /* Ruleset successful execution count */  
    uint32_t RULEXBAD;   /* Ruleset failed execution count */  
    uint32_t RULEXFSUM;  /* Ruleset sum of fired rules */  
    char RULEXPATH[256]; /* Ruleset execution path */  
} HBRSMF120ST100RecordExec;
```

Printing ODM Execution Data

- ODM 8.5.1 provides a sample utility for printing the SMF 120 subtype 100 records
- Sample source for the utility
 - ++HBRHLQ++.SHBRXLCS(HBRSMFP)
 - ++HBRHLQ++.SHBRXLCH(HBRSMF)
- Sample JCL to run the utility
 - ++HBRHLQ++.SHBRJCL(HBRSMFP)

```

Deploy

ODM for z/OS enables smart organizations to capitalize on modernization and innovation

- Faster Time to Market:
 - Ability to react to changes in a fast pace competitive marketplace though Business events and rules
- Lower cost of maintenance
 - Leading to improvement operational efficiency and total cost of ownership
- Better visibility and control
 - Leading to improvement to better corporate governance
- Ability to implement the best rules for the best outcome
 - Business users can see, understand and have the appropriate tools to support the needs of the organization by maximizing their IT investment
- Ability to manage and document business decisions executed in System z applications
 - Authoring rules for COBOL & PL/I applications in business terminology
 - Ability to share business rules with Java and other COBOL & PL/I applications
 - Integrate seamlessly with existing COBOL & PL/I applications

- The information contained in this publication is provided for informational purposes only. While efforts were made to verify the completeness and accuracy of the information contained in this publication, it is provided AS IS without warranty of any kind, express or implied. In addition, this information is based on IBM's current product plans and strategy, which are subject to change by IBM without notice. IBM shall not be responsible for any damages arising out of the use of, or otherwise related to, this publication or any other materials. Nothing contained in this publication is intended to, nor shall have the effect of, creating any warranties or representations from IBM or its suppliers or licensors, or altering the terms and conditions of the applicable license agreement governing the use of IBM software.
- References in this presentation to IBM products, programs, or services do not imply that they will be available in all countries in which IBM operates. Product release dates and/or capabilities referenced in this presentation may change at any time at IBM's sole discretion based on market opportunities or other factors, and are not intended to be a commitment to future product or feature availability in any way. Nothing contained in these materials is intended to, nor shall have the effect of, stating or implying that any activities undertaken by you will result in any specific sales, revenue growth or other results.
- If the text contains performance statistics or references to benchmarks, insert the following language; otherwise delete:
Performance is based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput or performance that any user will experience will vary depending upon many factors, including considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve results similar to those stated here.
- If the text includes any customer examples, please confirm we have prior written approval from such customer and insert the following language; otherwise delete:
All customer examples described are presented as illustrations of how those customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics may vary by customer.
- Please review text for proper trademark attribution of IBM products. At first use, each product name must be the full name and include appropriate trademark symbols (e.g., IBM Lotus® Sametime® Unyte™). Subsequent references can drop "IBM" but should include the proper branding (e.g., Lotus Sametime Gateway, or WebSphere Application Server). Please refer to <http://www.ibm.com/legal/copytrade.shtml> for guidance on which trademarks require the ® or ™ symbol. Do not use abbreviations for IBM product names in your presentation. All product names must be used as adjectives rather than nouns. Please list all of the trademarks that you use in your presentation as follows; delete any not included in your presentation. IBM, the IBM logo, Lotus, Lotus Notes, Notes, Domino, Quickr, Sametime, WebSphere, UC2, PartnerWorld and Lotusphere are trademarks of International Business Machines Corporation in the United States, other countries, or both. Unyte is a trademark of WebDialogs, Inc., in the United States, other countries, or both.
- If you reference Adobe® in the text, please mark the first use and include the following; otherwise delete:
Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States, and/or other countries.
- If you reference Java™ in the text, please mark the first use and include the following; otherwise delete:
Java and all Java-based trademarks are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.
- If you reference Microsoft® and/or Windows® in the text, please mark the first use and include the following, as applicable; otherwise delete:
Microsoft and Windows are trademarks of Microsoft Corporation in the United States, other countries, or both.
- If you reference Intel® and/or any of the following Intel products in the text, please mark the first use and include those that you use as follows; otherwise delete:
Intel, Intel Centrino, Celeron, Intel Xeon, Intel SpeedStep, Itanium, and Pentium are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries.
- If you reference UNIX® in the text, please mark the first use and include the following; otherwise delete:
UNIX is a registered trademark of The Open Group in the United States and other countries.
- If you reference Linux® in your presentation, please mark the first use and include the following; otherwise delete:
Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both. Other company, product, or service names may be trademarks or service marks of others.
- If the text/graphics include screenshots, no actual IBM employee names may be used (even your own), if your screenshots include fictitious company names (e.g., Renovations, Zeta Bank, Acme) please update and insert the following; otherwise delete: All references to [insert fictitious company name] refer to a fictitious company and are used for illustration purposes only.
