# Data Lifecycle Management

# IBM Data Studio

## *A Foundation for Innovation*

***IBM Data Studio is a comprehensive data management solution***

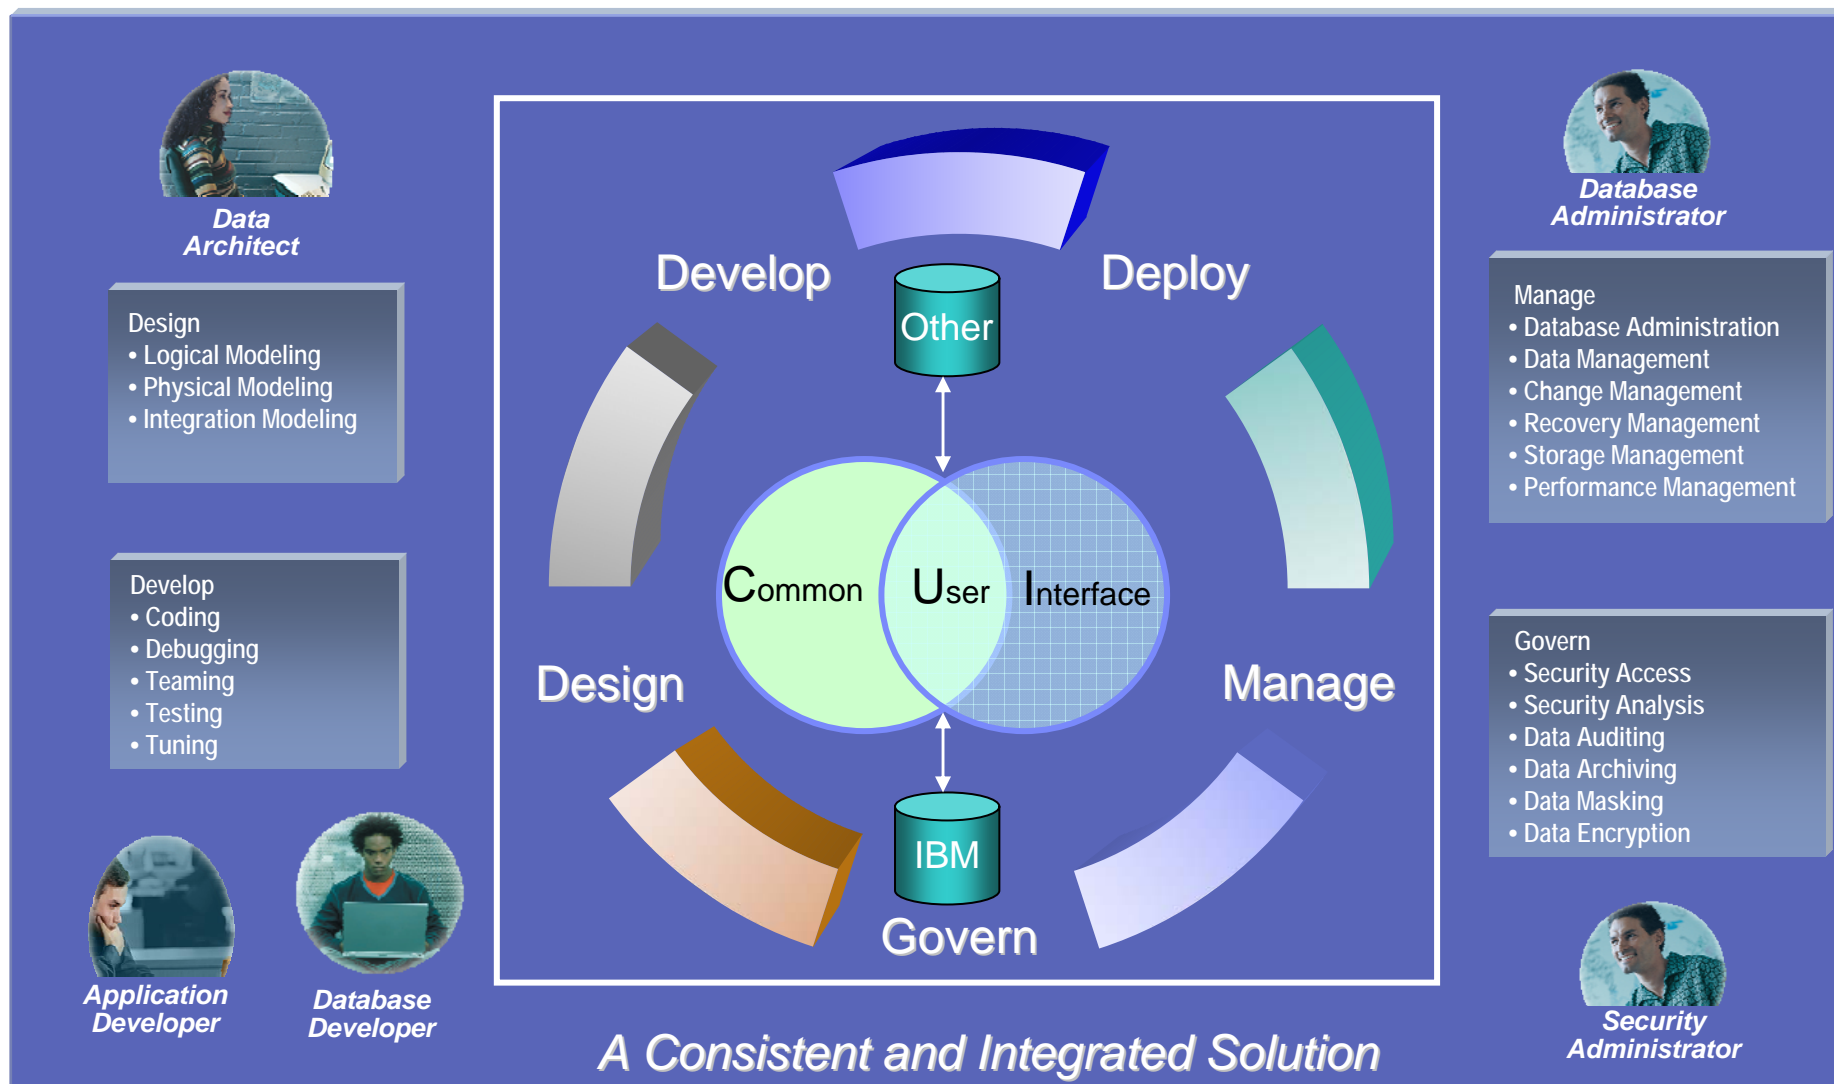

It empowers you to effectively

### **Design, develop, deploy and manage**

*your data, databases and database applications throughout the data management lifecycle utilizing a consistent and integrated user interface*

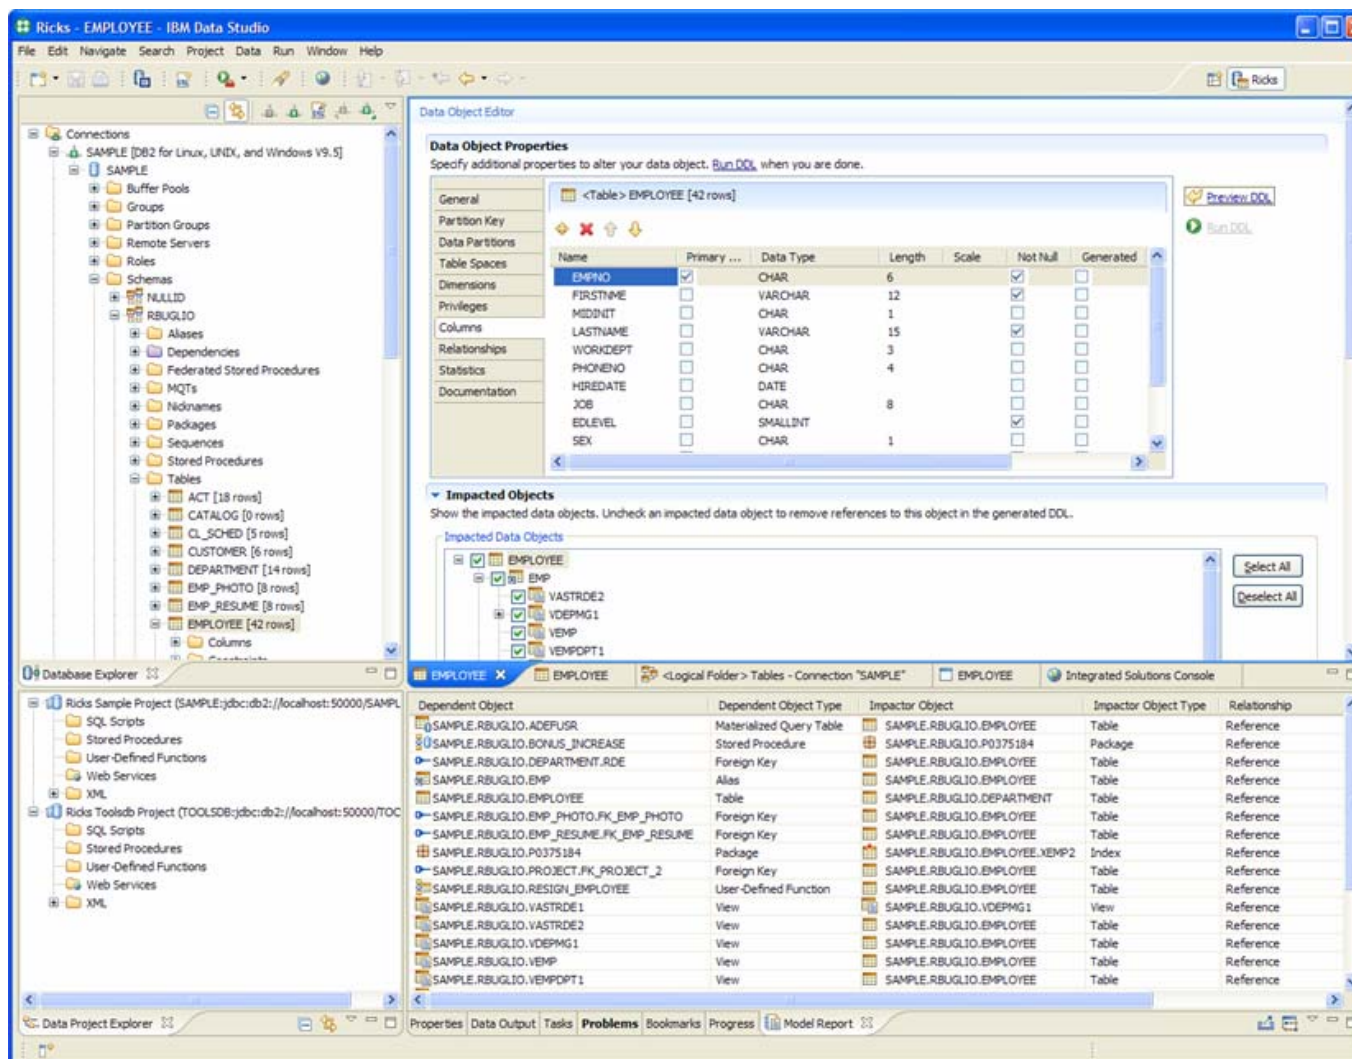

# IBM Data Studio

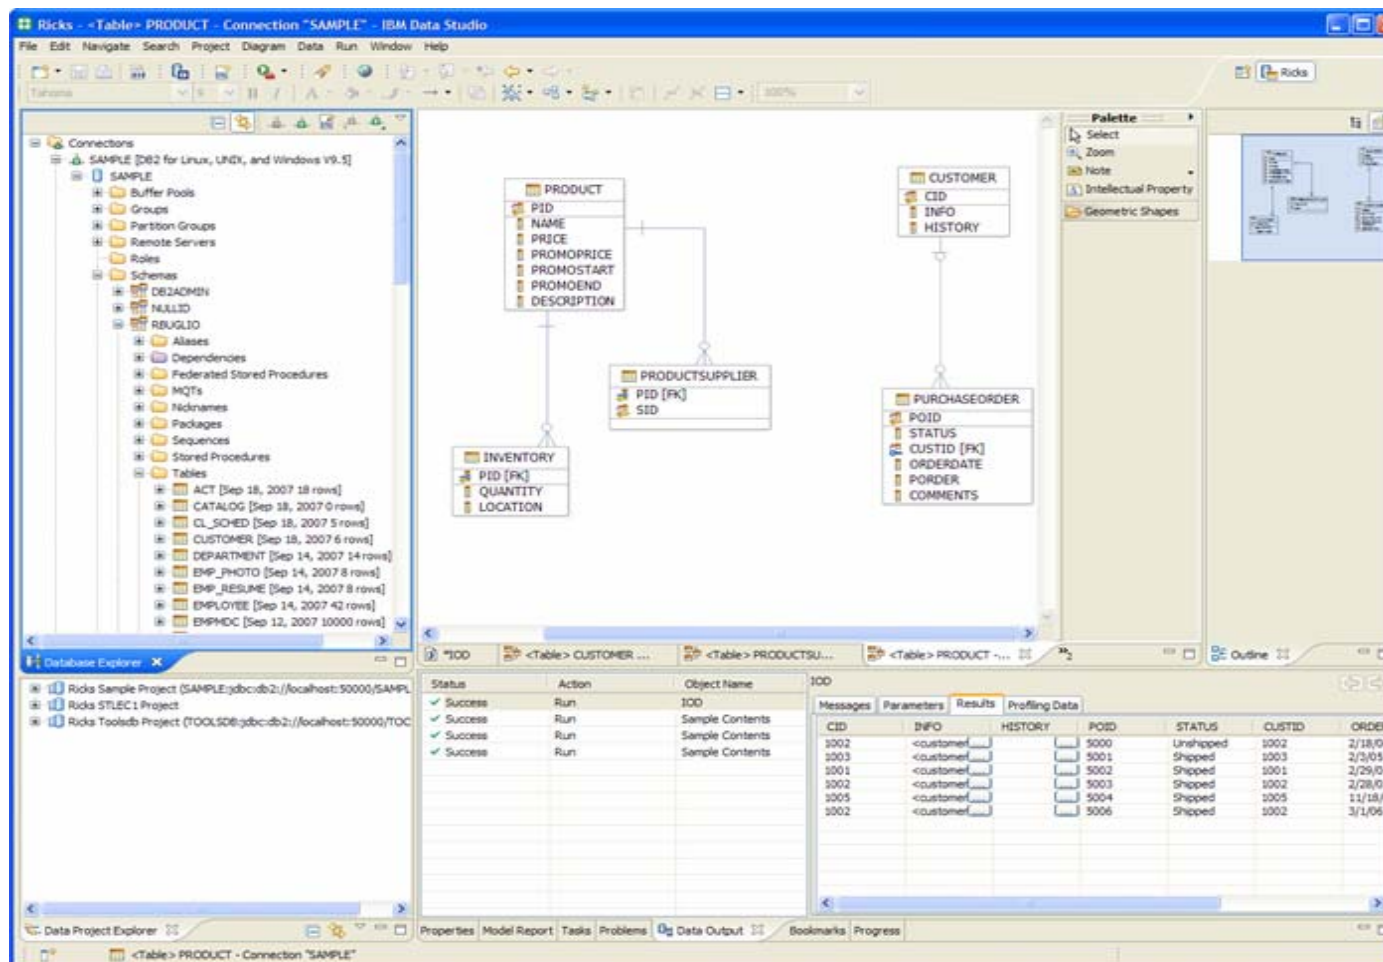

# IBM Data Studio

## *A Consistent and Productive work environment*

# IBM Data Studio ER Diagramming

## ER Diagram Viewer

*Easily create, view and share ER diagrams*

# IBM Data Studio Query Management

## Integrated Query Editor

The screenshot displays the IBM Data Studio interface. The main window shows an XQuery script in a text editor. The script uses XQuery functions like `fn:distinct-values` and `db2-fn:sqlquery` to process XML data from a database. To the right, an 'Outline' view shows a hierarchical tree of the query's execution plan, including nodes for 'Prolog', 'FLWOR', 'For', 'name', 'FLWOR', 'db2-fn:sqlcolumn', 'Let', 'db2-fn:sqlquery', 'Let', 'customer', and 'id'. Below the main editor, a separate window shows a SQL query with a complex `case` statement and `select` clause, including conditions for `GRANTEE`, `SYSADMALAUTH`, `SYSCTRLAUTH`, `BINDADDAUTH`, `CREATEDBAAUTH`, `CREATEDBCAUTH`, `CREATEDBAUTH`, and `CREATEDBAUTH`.

```

-- <ScriptOptions statementTerminator="!" />
XQUERY declare default element namespace "http://posample.org";
for $city in fn:distinct-values (db2-fn:xmlcolumn('CUSTOMER.INFO') /customerinfo/addr/
return
  <city name = '{ $city}'>
  (
    for $cust in db2-fn:xmlcolumn('CUSTOMER.INFO') /customerinfo[addr/city=$city]
    let $po := db2-fn:sqlquery("SELECT XMLELEMENT( NAME ""pos"",
      (XMLCONCAT( XMLELEMENT(NAME ""custid"", c.custid),
        XMLELEMENT(NAME ""order"", c.order)))
      FROM purchaseorder AS c")
    let $id := $cust/@Cid,
      $order := $po/pos[custid=$id]/order
    return
      <customer id='{ $id}'>
        { $cust/name}
        { $cust/addr}
        { $order}
      </customer>
  )
</city>!

```

```

1 select
2 B11.GRANTEE,
3 case
4 when SUM(B11.SYSADMALAUTH) > 0 AND SUM(B11.SYSADMALAUTH) < 1000 THEN 'Yes'
5 when SUM(B11.SYSADMALAUTH) >= 1000 THEN 'With Grant'
6 else 'No'
7 end,
8 case
9 when SUM(B11.SYSCTRLAUTH) > 0 AND SUM(B11.SYSCTRLAUTH) < 1000 THEN 'Yes'
10 when SUM(B11.SYSCTRLAUTH) >= 1000 THEN 'With Grant'
11 else 'No'
12 end,
13 case
14 when SUM(B11.CREATEDBAAUTH) = 0 AND SUM(B11.CREATEDBCAUTH) = 0 THEN 'No'
15 when SUM(B11.CREATEDBAAUTH) > SUM(B11.CREATEDBCAUTH) AND SUM(B11.CREATEDBAAUTH) < 1000 THEN 'Yes'
16 when SUM(B11.CREATEDBAAUTH) < SUM(B11.CREATEDBCAUTH) AND SUM(B11.CREATEDBCAUTH) < 1000 THEN 'Yes'
17 when SUM(B11.CREATEDBAAUTH) > SUM(B11.CREATEDBCAUTH) AND SUM(B11.CREATEDBAAUTH) >= 1000 THEN 'With Grant'
18 when SUM(B11.CREATEDBAAUTH) < SUM(B11.CREATEDBCAUTH) AND SUM(B11.CREATEDBCAUTH) >= 1000 THEN 'With Grant'
19 end,
20 case
21 when SUM(B11.BINDADDAUTH) > 0 AND SUM(B11.BINDADDAUTH) < 1000 THEN 'Yes'
22 when SUM(B11.BINDADDAUTH) >= 1000 THEN 'With Grant'
23 else 'No'
24 end
25 from
26 (select B10.GRANTEE,
27 case A10.SYSADMALAUTH
28 when 'Y' then 1
29 when 'G' then 1000
30 else 0
31 end,
32 case A10.SYSCTRLAUTH
33 when 'Y' then 1
34 when 'G' then 1000
35 else 0
36 end,
37 case A10.CRFATPRAAITH

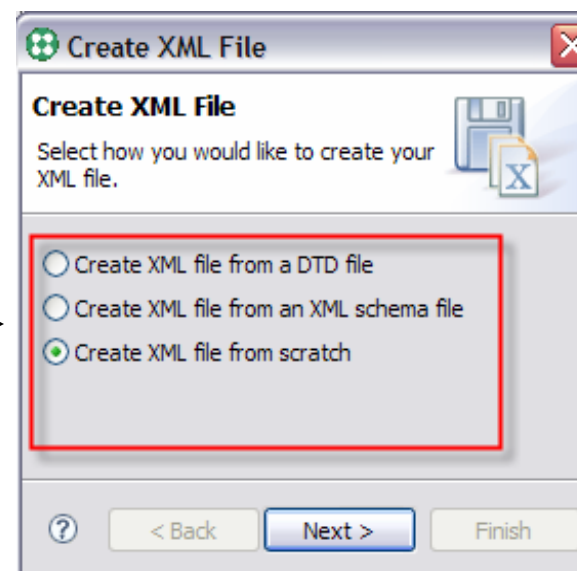

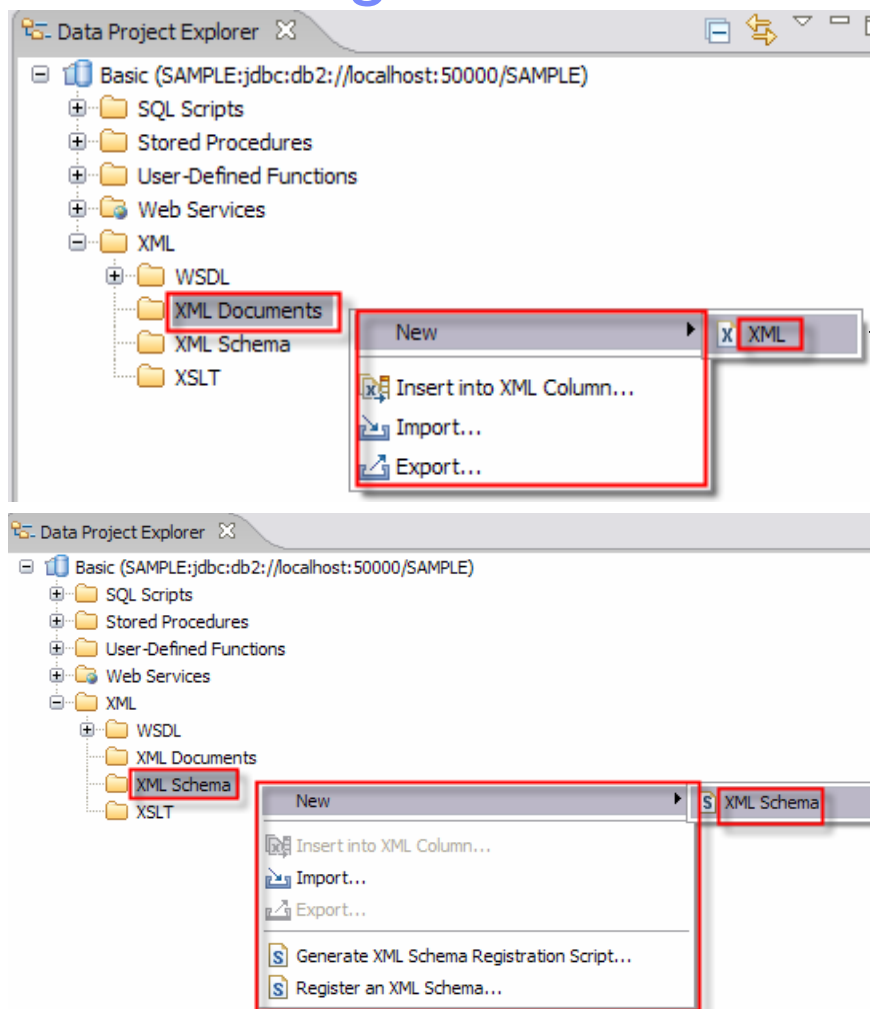

```

- Express yourself with optimal queries
  - Content assistance for database objects
  - Rapid interactive end-user feedback
  - Extensible templates
  - Multiple SQL statement testing
  - SQL assistance and XQuery assistance

**SQL and XQuery together  
using an integrated editor**

# IBM Data Studio XML Management

## XML Editors

- **Easily perform all your XML needs**
  - Create XML documents and schemas
  - Import and export XML documents and schemas
  - Insert XML documents into XML columns
  - Generate XML Schema registration scripts
  - Register XML Schema

***Extensive XML support and capabilities***

# DB2 Application Development

## *Programming paradigms*

### Java

- The IBM Data Server Driver for JDBC and SQLJ is available to support the most demanding of Java applications.
  - Driver is compliant with the JDBC 3.1 and JDBC 4.0 specifications
  - Supports type 4 and type 2 modes
  - Can be used for either client or server-side Java DB2 applications

### .NET

- The IBM Data Server Driver for ODBC, CLI, and .NET is available as a small footprint runtime for deploying .NET applications.
- [IBM Database add-ins for Visual Studio](#)
  - Extends Visual Studio 2005 and 2008 IDE for DB2 application development

### PHP, PERL, Python, Ruby

#### – PHP

- Native DB2 ([ibm\\_db2](#)) and [PDO](#) drivers are available and maintained by IBM
  - binaries included in IBM Data Server clients
  - driver source code is available on PECL
- [Zend Core for IBM](#) is an integrated stack

#### – Perl

- IBM develops and maintains the [DBD::DB2 driver](#)
  - supports DBI standard and available on CPAN

#### – Python

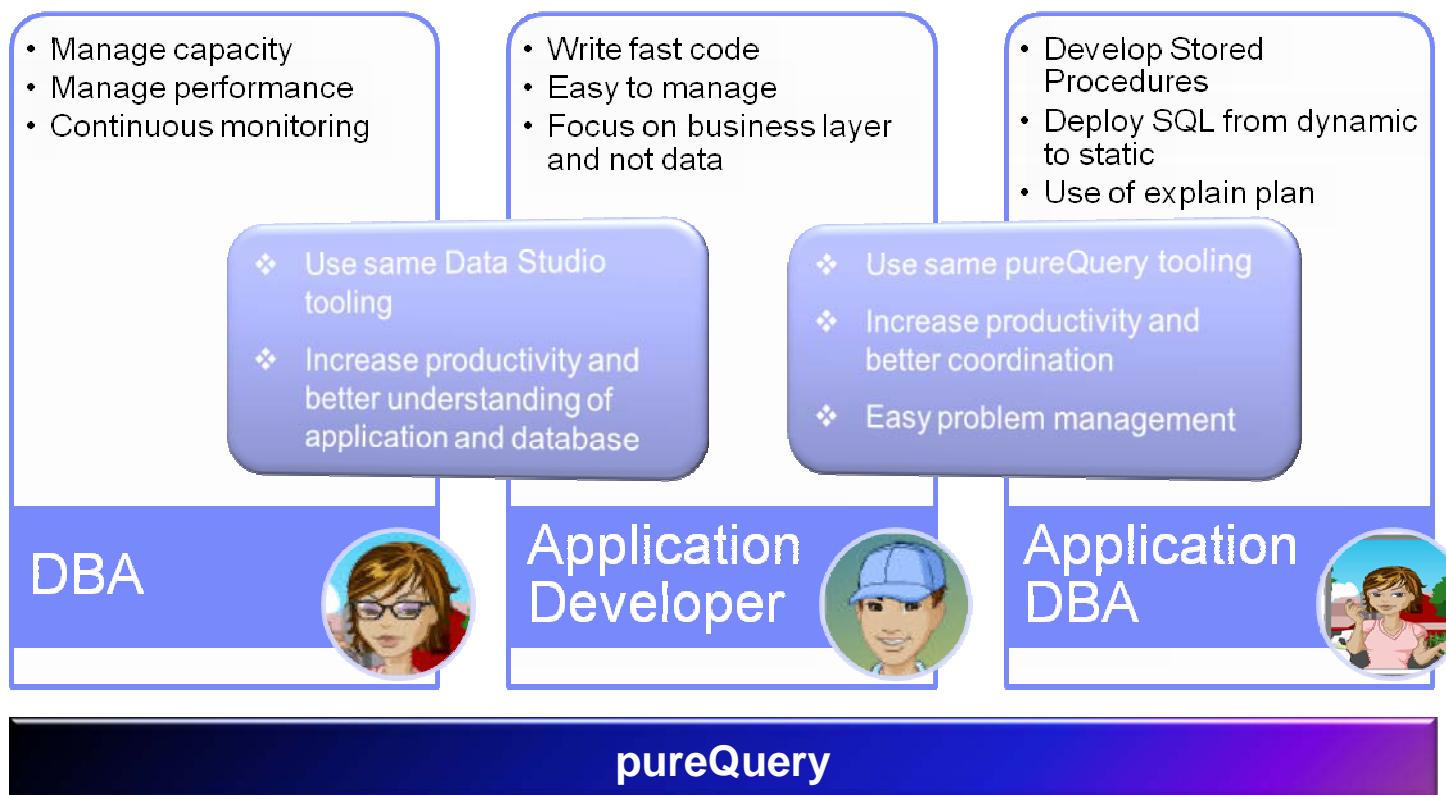

- IBM develops and maintains the [Python DB API 2.0 driver](#)

#### – Ruby on Rails

- IBM develops and maintains the Ruby driver and Rails adapter
  - Binaries included in IBM Data Server client

# Interaction between DBA and App Developer

## How does Data Studio and pureQuery Help?

## IBM Data Studio

*Improved Java data access*

**pureQuery is a high-performance Java data access platform focused on simplifying the tasks of developing and managing applications that access data**

### Optimizing Java database development and deployment

- Productive set of integrated tools, APIs, and runtime for Java applications
- Unified programming interface to query databases and Java objects
- Unleash the power of SQL within Java applications
- Provides infrastructure to greatly improve monitoring and problem determination for Java applications that access DB2

# Developing with pureQuery

## *Flexible programming styles*

## **pureQuery supports several programming styles**

### **1. Inline style – SQL in application**

- Simplified direct data access via SQL

### **2. Method Style – Encapsulate SQL in Java interfaces**

- Annotated Method Style
  - Define SQL as Java annotations
- Named query style – extension of Annotated Method Style
  - Define SQL in XML files

## pureQuery - "Inline Style"

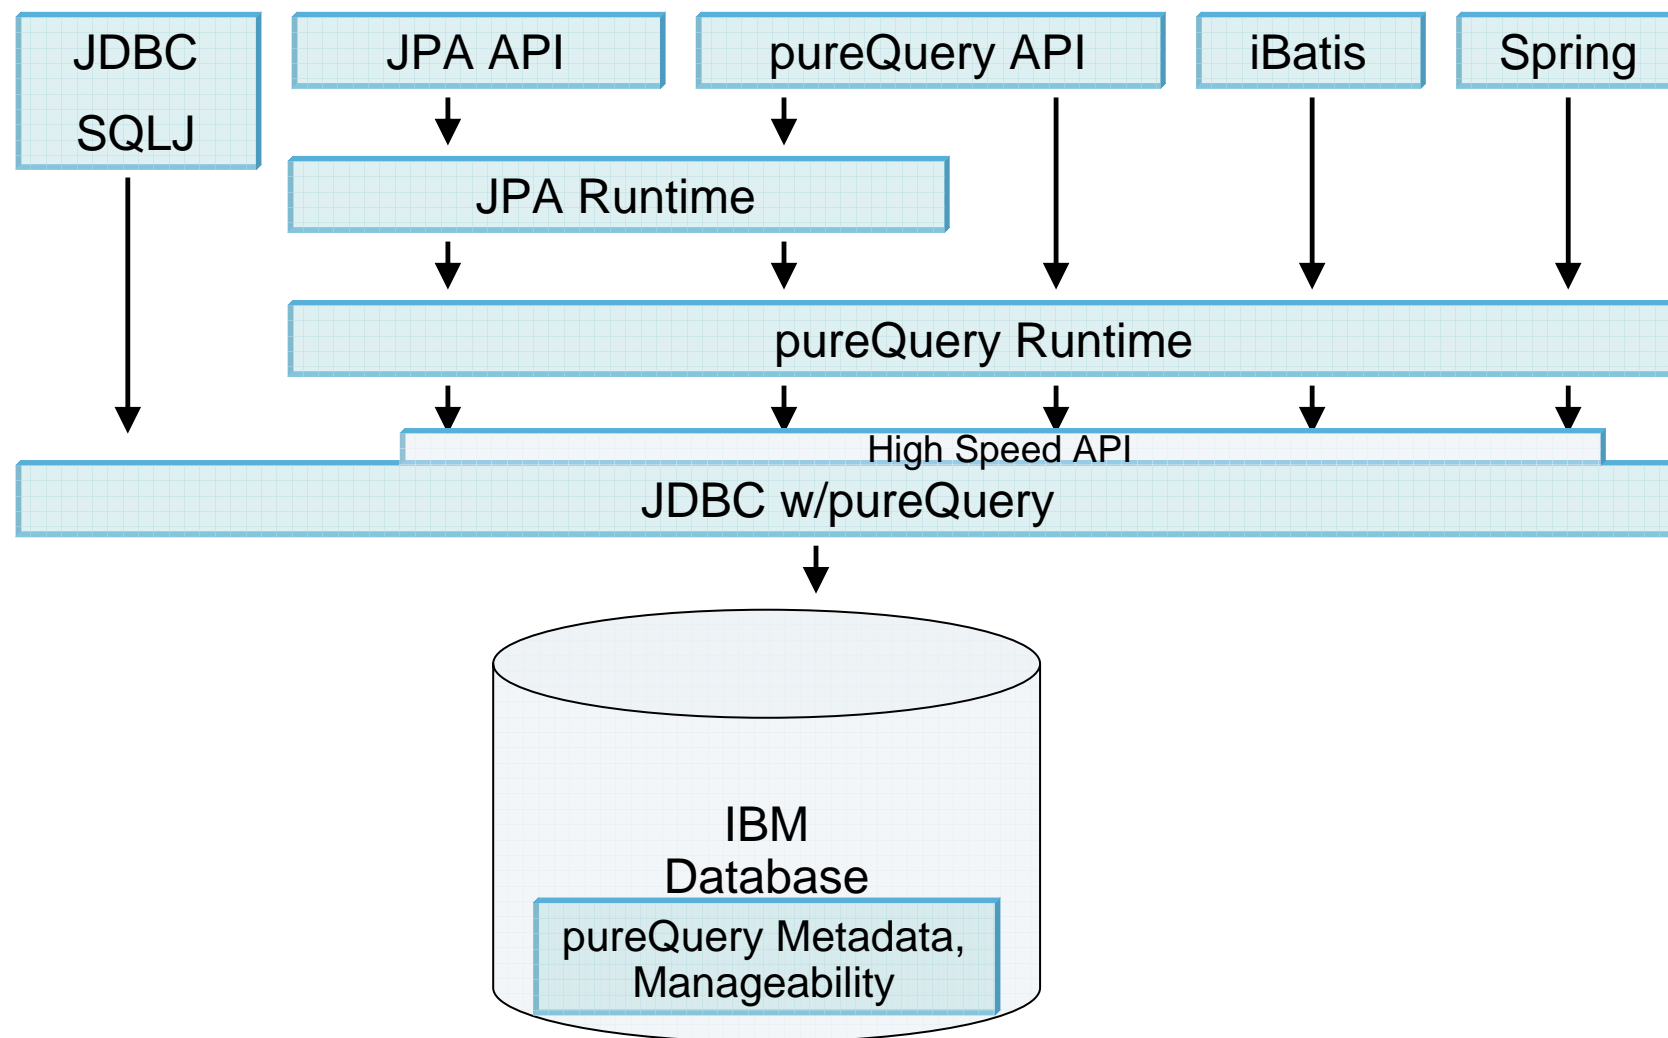

- SQL statements coded directly in application
- SQL can be fully declared and embedded, or constructed at execution time
- All standard SQL supported including queries, updates, DDL, CALL statements

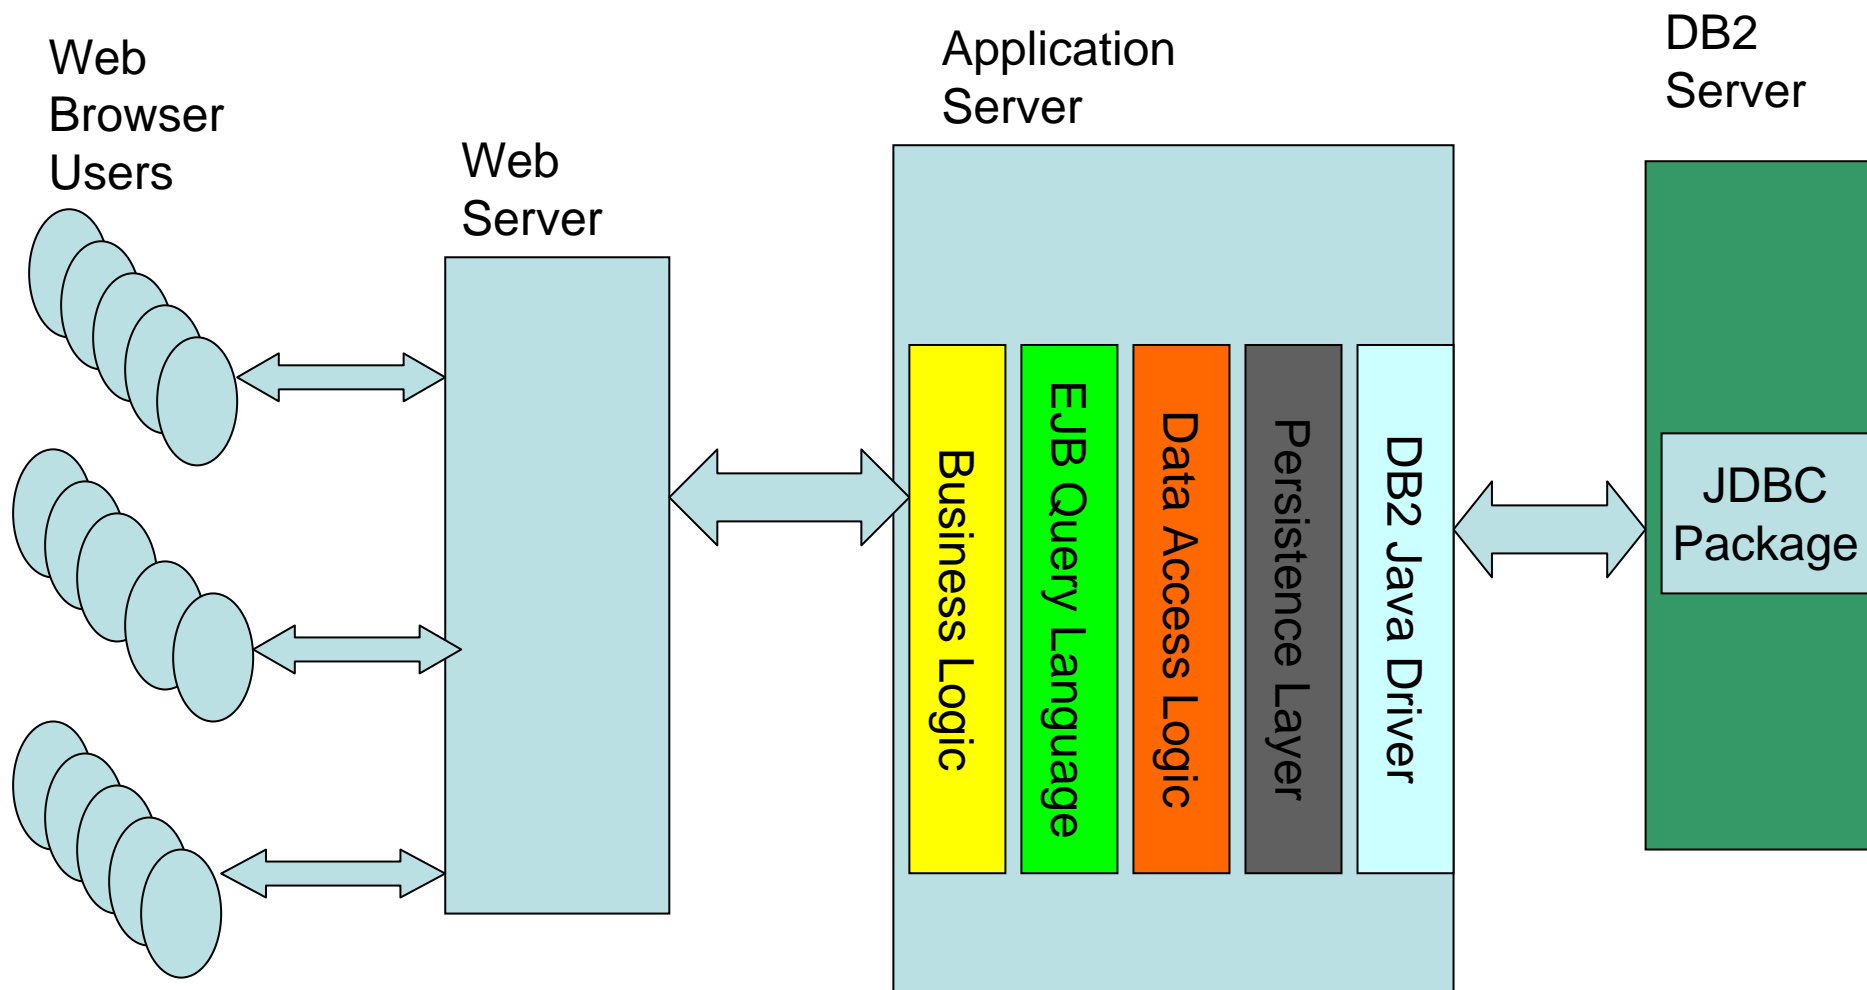

```
import com.acme.Customer;
Connection con = DriverManager.getConnection(...);
Data db = DataFactory.getData(con);
Customer c;
int region = 123;
Iterator<Customer> customers =
    db.queryIterator("SELECT custId, name FROM Customer WHERE region=?1",
        Customer.class, region);
while (customers.hasNext()){
    c = customers.next();
    System.out.println(c.custId+" "+c.name);
}
((ResultIterator) customers).close(); // best practice
```

```
public Customer {
    @Id public Integer custId;
    public String name;
    public String addressL1;
    public String city;
    @Column(name="REGION")
    public Integer storeRegion;
    ...
}
```
