

zEnterprise – An Ideal Basis For Smarter Computing

**System z – Best Place For Business
Analytics**

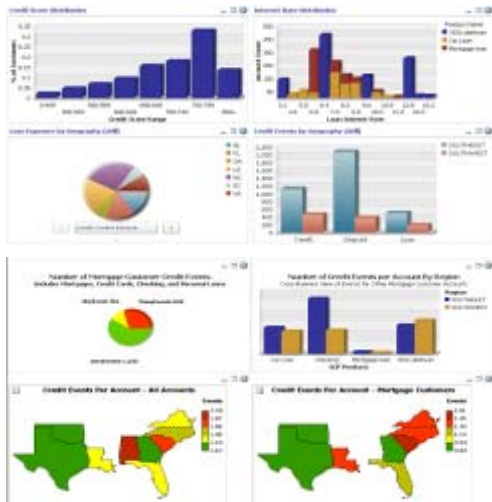

Business Analytics Are A Source Of New Business Intelligence In A Smarter Planet

Data is aggregated from all sources and optimized for fast access, to support sophisticated analysis on massive amounts of historical data

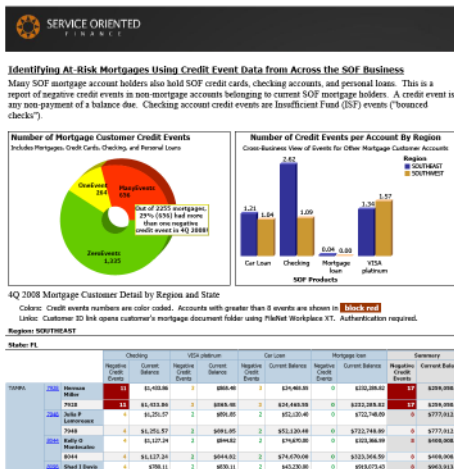

Businesses Analytics Answers Key Questions That Drive A Competitive Edge

How are we doing?

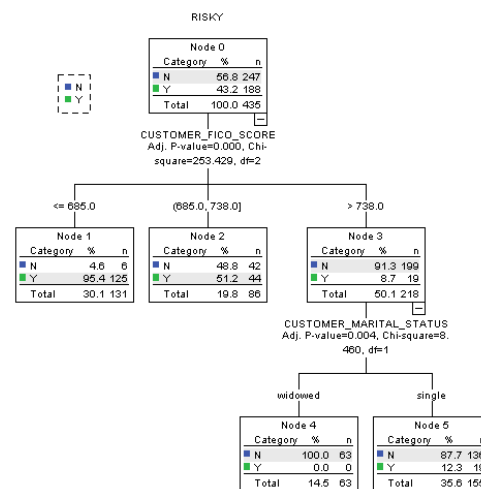

Dashboard
Operational or Strategic

Why are we on/off track?

Query and Reporting
Exploratory Analysis

What should we do next?

Analytics
Statistics and Predictive Analytics

Executive

Business Manager

Casual Business User

Line Manager

Business Analyst

Financial Analyst

Businesses Benefit By Using An Analytic Approach Over Intuition

40% decline
in homicide rates

600% increase
in cross-sell
campaign

\$13.8 Million
in cost savings

PRIMERICA
1000's of Reps
run their daily business using
IBM Business Analytics

80% decrease
in reporting time on top of
Oracle e-business suite

OmnicomGroup

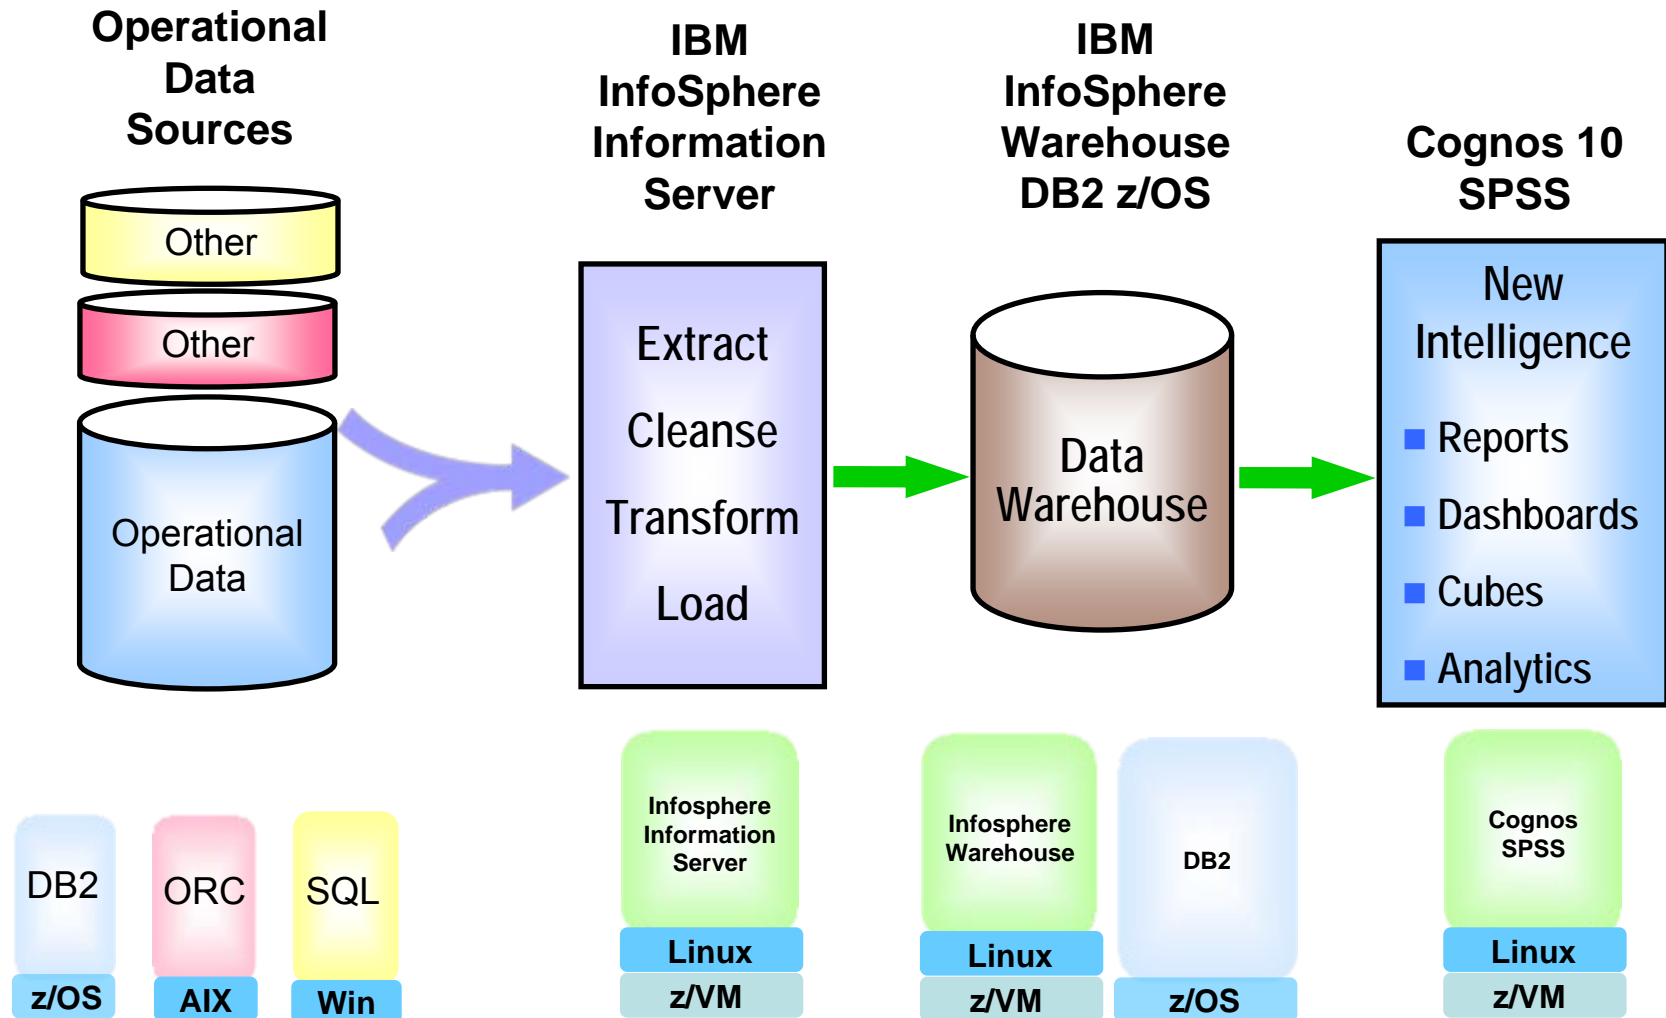

\$200 Million
increase in cash flow

The more analytics a business uses, the better it performs

Implementing A Business Analytics Solution Involves 3 Primary Steps

- Load data from Operational data stores in frequent intervals into a large unified historical data repository known as a Data Warehouse
 - ▶ Apply Extract, Cleanse, Transform, Load processes
- Create Reports and Dashboards to answer a variety of what-if questions
 - ▶ Run simple, intermediate or complex queries that can take a few seconds, minutes, to several hours to run
- Use Predictive Analytics to gain insights and convert them to actions
 - ▶ Using data from past, score the likelihood of outcomes for future events

zEnterprise Now Provides All Of The Components You Need For A Complete Analytic Solution In One Platform

IBM Smart Analytics System 9700 – A Comprehensive Package For Business Analytics

- Pre-configured appliance-like solution with aggressive solution edition pricing
- Hardware/OS
 - ▶ IBM zEnterprise z196 technology
 - ▶ IBM System Storage DS8800 Intelligent Disk controller
 - Large controller cache and 3 Tier disk offering
 - ▶ z/OS 1.12
- Unique Software
 - ▶ DB2 10 for z/OS
 - ▶ Cognos 10 BI (Linux on System z)
 - ▶ InfoSphere Warehouse (Linux on System z)
 - ▶ SPSS Modeler (Linux on System z)
- Optional Components
 - ▶ IBM DB2 Analytics Accelerator
 - ▶ Solid State drives, integrated within DS8800
 - Easy Tier to identify and migrate “hot data” to SSD

Create Reports And Dashboards Using IBM Cognos

■ People-centric

- ▶ Server based business analytics accessed via browser
- ▶ Consistent user interface for different analytic activities
- ▶ Reuse new intelligence assets
- ▶ Built-in collaboration and social networking
- ▶ Threaded discussions, activities, and notifications

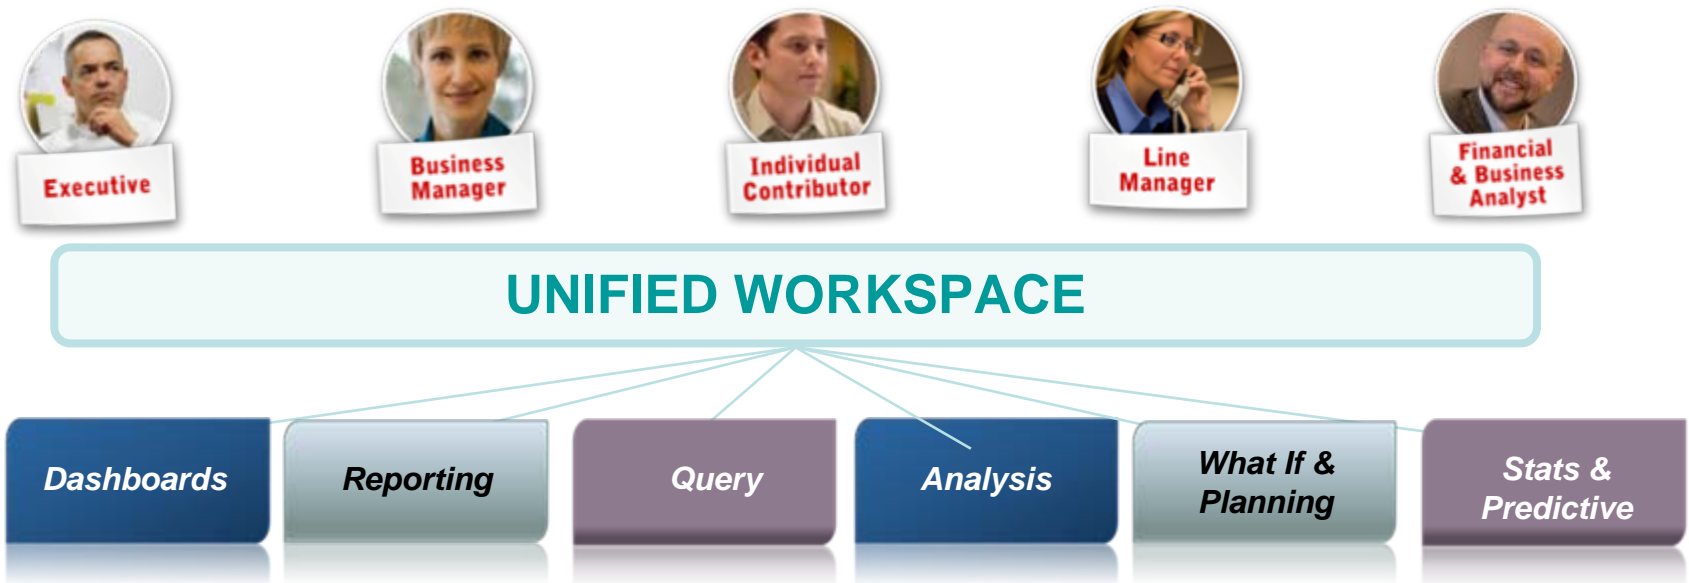

■ Easy to deploy and manage

- ▶ Implemented in Java, runs on WebSphere
- ▶ Scales up and out across heterogeneous hardware and operating systems
- ▶ Runs on Linux on System z

IBM Cognos Provides A Unified Workspace

- All activities from one place, without jumping to different interfaces
 - ▶ Dashboards for summary overview
 - ▶ Reports for tracking progress
 - ▶ Ad hoc queries and drill down for analysis and what if scenarios
 - ▶ Statistics and predictive analysis
- Progressive interaction – Interact and analyze information based on role
- Form decision networks for collaborative business analytics

Reuse Prior Assets In New Deliverables

- Author once, consume anywhere
- All analytic assets share a common metadata model and a common multilingual report specification
- Ensures consistent information and enables reuse across platform functions

DEMO: Use Cognos To Identify New Business Insights From The Data Warehouse

1. Show report generated in Cognos Report Studio in PDF format
2. Report identifies high-risk mortgages by looking at negative credit events in other customer accounts (CC, Checking, etc...)
3. Report uses both structured and unstructured data (link to mortgage data stored in FileNet)
4. Use Dashboard to monitor the business operations

Identifying At-Risk Mortgages Using Credit Event Data from Across the SOF Business

Many SOF mortgage account holders also hold SOF credit cards, checking accounts, and personal loans. This is a report of negative credit events in non-mortgage accounts belonging to current SOF mortgage holders. A credit event is any non-payment of a balance due. Checking account credit events are Insufficient Fund (ISF) events ("bounced checks").

4Q 2008 Mortgage Customer Detail by Region and State

Colors: Credit events numbers are color coded. Accounts with greater than 8 events are shown in **block red**.

Links: Customer ID link opens customer's mortgage document folder using FileNet Workplace XT. Authentication required.

Region: SOUTHEAST

State: FL

		Checking		VISA platinum		Car Loan		Mortgage loan		Summary	
		Negative Credit Events	Current Balance	Negative Credit Events	Current Balance	Negative Credit Events	Current Balance	Negative Credit Events	Current Balance	Negative Credit Events	Current Balance
TAMPA	7228	11	\$1,433.86	3	\$865.46	3	\$24,465.55	0	\$232,285.82	17	\$259,050.71

At risk customers are identified

Miami Dade County Runs Cognos On Linux On System z

Requirements:

- Demand for BI has really taken off
 - ▶ New Federal reporting requirements
 - ▶ Every new system, every new solution, every new application is having a business intelligence component
- Multiple Cognos 8 BI deployments
- Wanted an enterprise BI standardized solution, but
 - ▶ Needed higher capacity – grow from approx 400 to 1000 users
 - ▶ Do more with less - less researchers, less software, less hardware, same staff
 - ▶ Had available IFL's on System z

Results:

- 11 days to move from distributed to System z deployment model for Cognos 8 BI
 - ▶ Quickly and easily meet new requirements
- Consolidate multiple BI deployments on to a single platform
- Single point for BI administration
- Consolidate multiple disparate data sources
- Ensure 99.999% availability
- Offer a complete disaster recovery plan
- Additional green savings

SPSS Enables Customers To Predict Future Events And Drive Better Business Outcomes

IBM SPSS Decision Management Collaboration & Deployment *

* Runs on Linux on System z

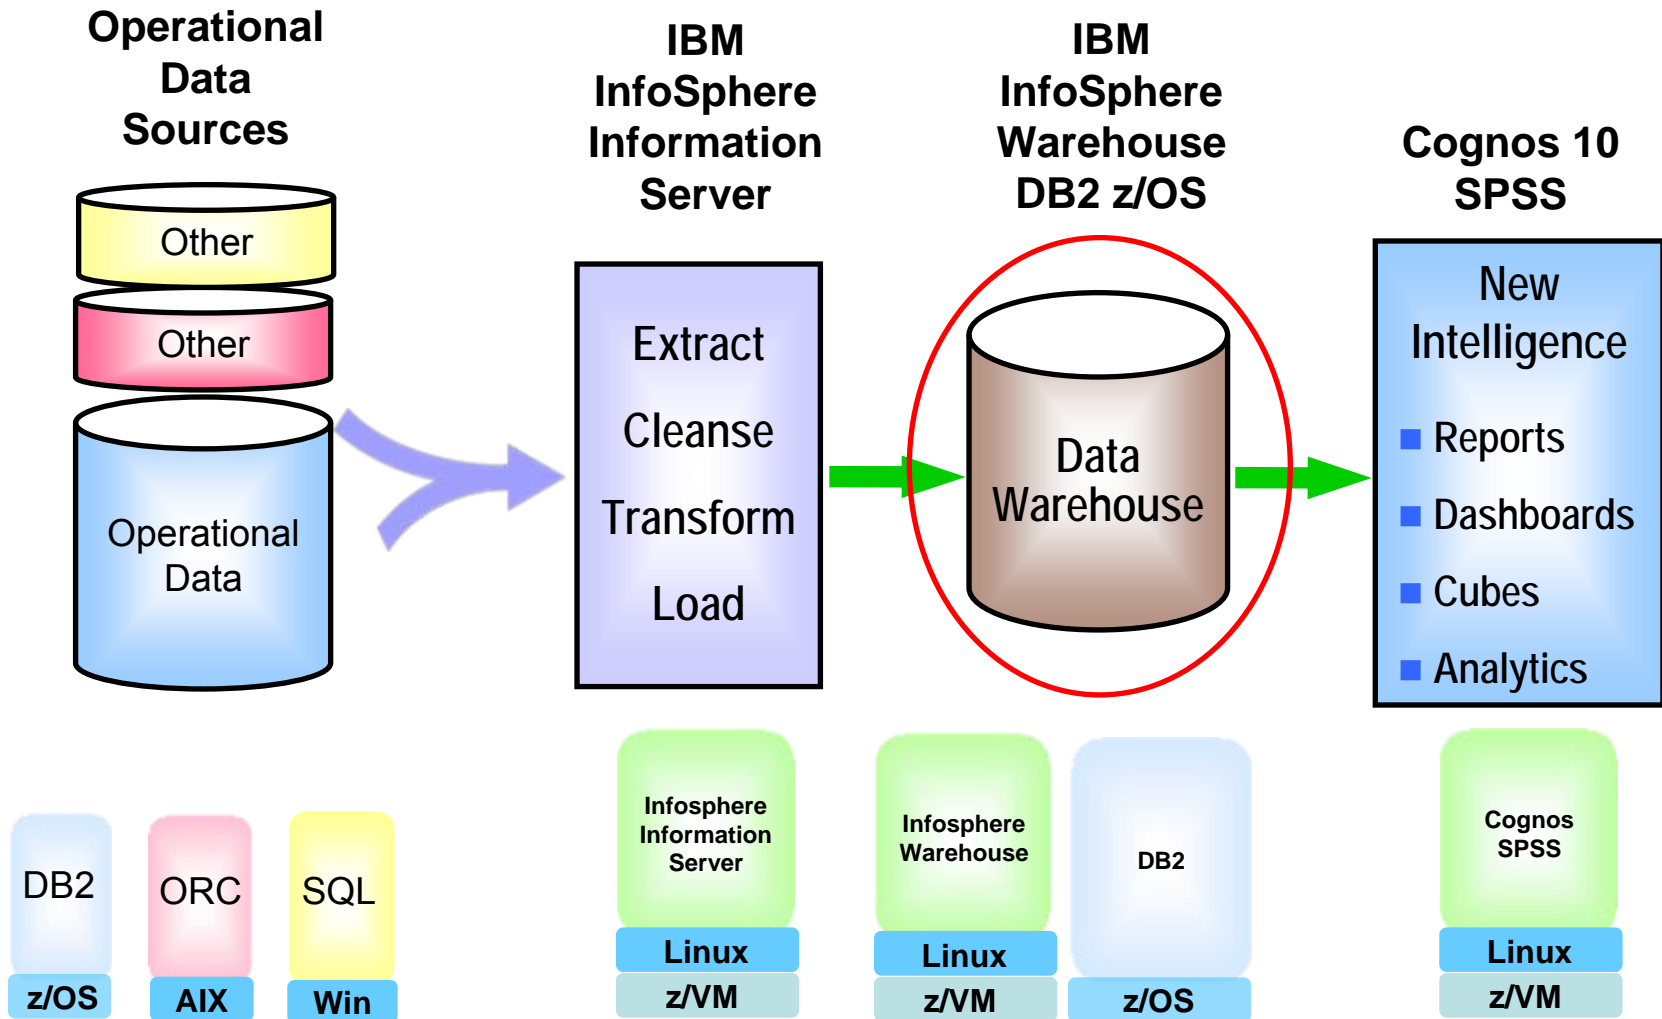

DEMO: Discover Rules For Identifying Risky Customers Using SPSS Statistics

1. Load data from Data Warehouse on DB2 for z/OS into SPSS Statistics
2. Pre-process the data to create new attributes for quantifying negative credit events across different product lines and create a risk flag for mortgage
3. Run Comparison of Means and Decision Tree to discover rules for characterizing risky customers

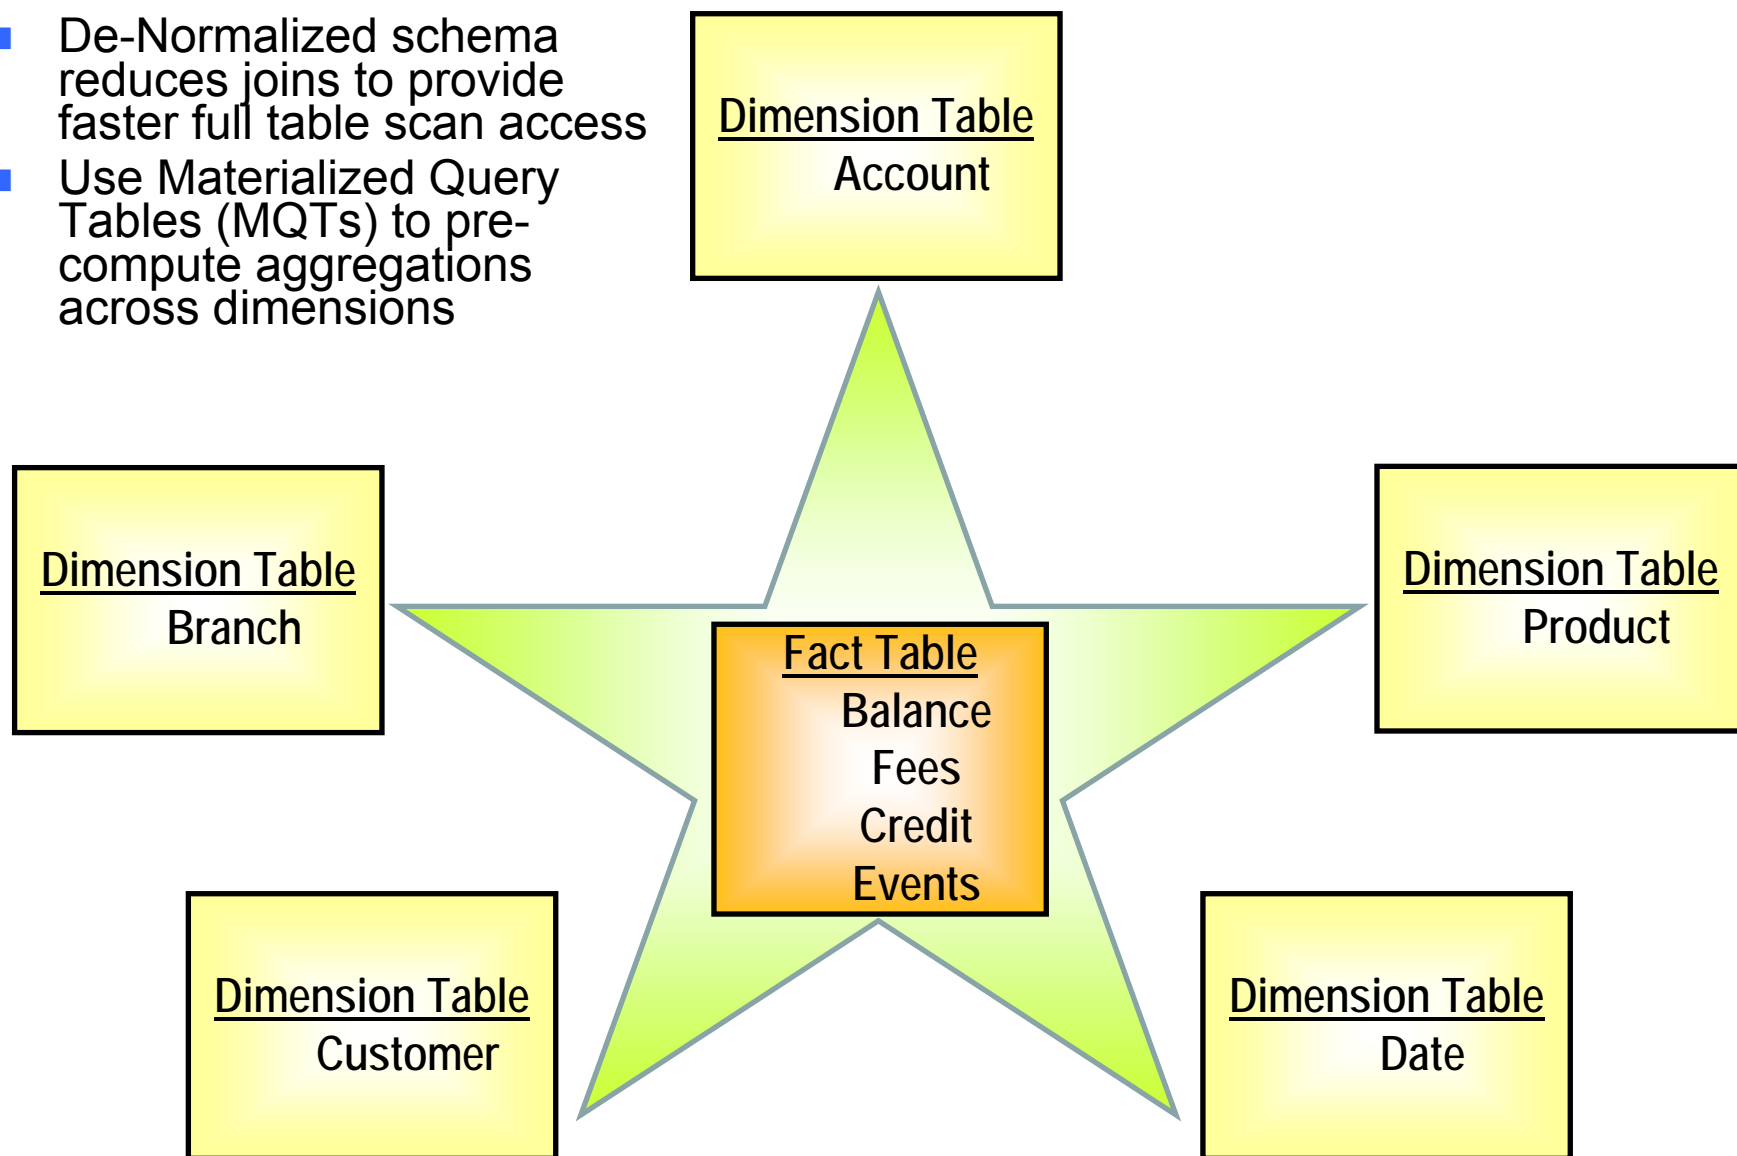

- Credit Limits identified for characterizing risky customers
- Use these credit limits for automated loan approval process

The Data Warehouse Is At The Heart Of A Business Analytics Solution

Data Warehouses Typically Organize Data In A Star Schema Format

- De-Normalized schema reduces joins to provide faster full table scan access
- Use Materialized Query Tables (MQTs) to pre-compute aggregations across dimensions

DB2 For z/OS Is Optimized For Data Warehouse Workloads

- Data Warehouse Workloads typically include a mix of simple, intermediate and complex queries
- Data is partitioned to increase parallelism and compressed to increase I/O performance
- DB2 for z/OS Cost Based Optimizer decides best execution plan for each query
 - ▶ Simple queries typically assigned to a single processing thread
 - ▶ Complex queries may be decomposed into operations that execute in parallel
 - ▶ Queries may be automatically rewritten to take advantage of pre-computed partial results in materialized query tables (MQT)
- Result: Optimum Throughput

z/OS Is Optimized For Data Warehouse Workloads

- More processors, memory and cache than other enterprise servers provides high concurrency
- I/O offloaded to the Dedicated I/O Sub-system
- Parallel Sysplex clustering designed for near linear scaling
- Hardware compression
- Optimized resource sharing for mixed queries with WLM
- DS8000 delivers high storage bandwidth with caching
- Unmatched scalability
- Systematic Disaster Recovery
- Attractive pricing with IBM Smart Analytics Solution 9700

Add IBM DB2 Analytics Accelerator For Even More Optimization

- *A workload-optimized, blade-based appliance with storage integrated into the hardware rack and based on Netezza Technology*
- *Deeply integrated with DB2 for z/OS and transparent to applications*
- *Significantly speeds up the response time for a wide variety of complex queries using massively parallel processing architecture and patented data filtering technology at streaming speed using Field Programmable Gate Arrays (FPGAs)*
- *Drives down the costs of data warehousing and business analytics*

Breakthrough Technology Enabling New Opportunities

IDAA Leverages Massively Parallel Processing To Speed Up Complex Queries

Fact Table

Partitioning data into physical disks and assigning dedicated processors to each disk – throughput scales linearly with partitions

Storage

SMP Hosts

FPGA

CPU

"...when something took 24 hours I could only do so much with it, but when something takes 10 seconds, I may be able to completely rethink the business...", SVP, Nielsen

Outstanding Customer Results With IDAA

			DB2 Only		DB2 with IDAA		Times Faster
Query	Total Rows Reviewed	Total Rows Returned	Hours	Sec(s)	Hours	Sec(s)	
Query 1	2,813,571	853,320	2:39	9,540	0.0	5	1,908
Query 2	2,813,571	585,780	2:16	8,220	0.0	5	1,644

Speed Ups Ranging From 13x to 1,908x

Actual customer results, October 2011

Customers Are Excited About Business Analytics On zEnterprise

DB2 Analytics Accelerator: “we had this up and running in days with queries that ran over 1000 times faster”

DB2 Analytics Accelerator: “we expect ROI in less than 4 months”

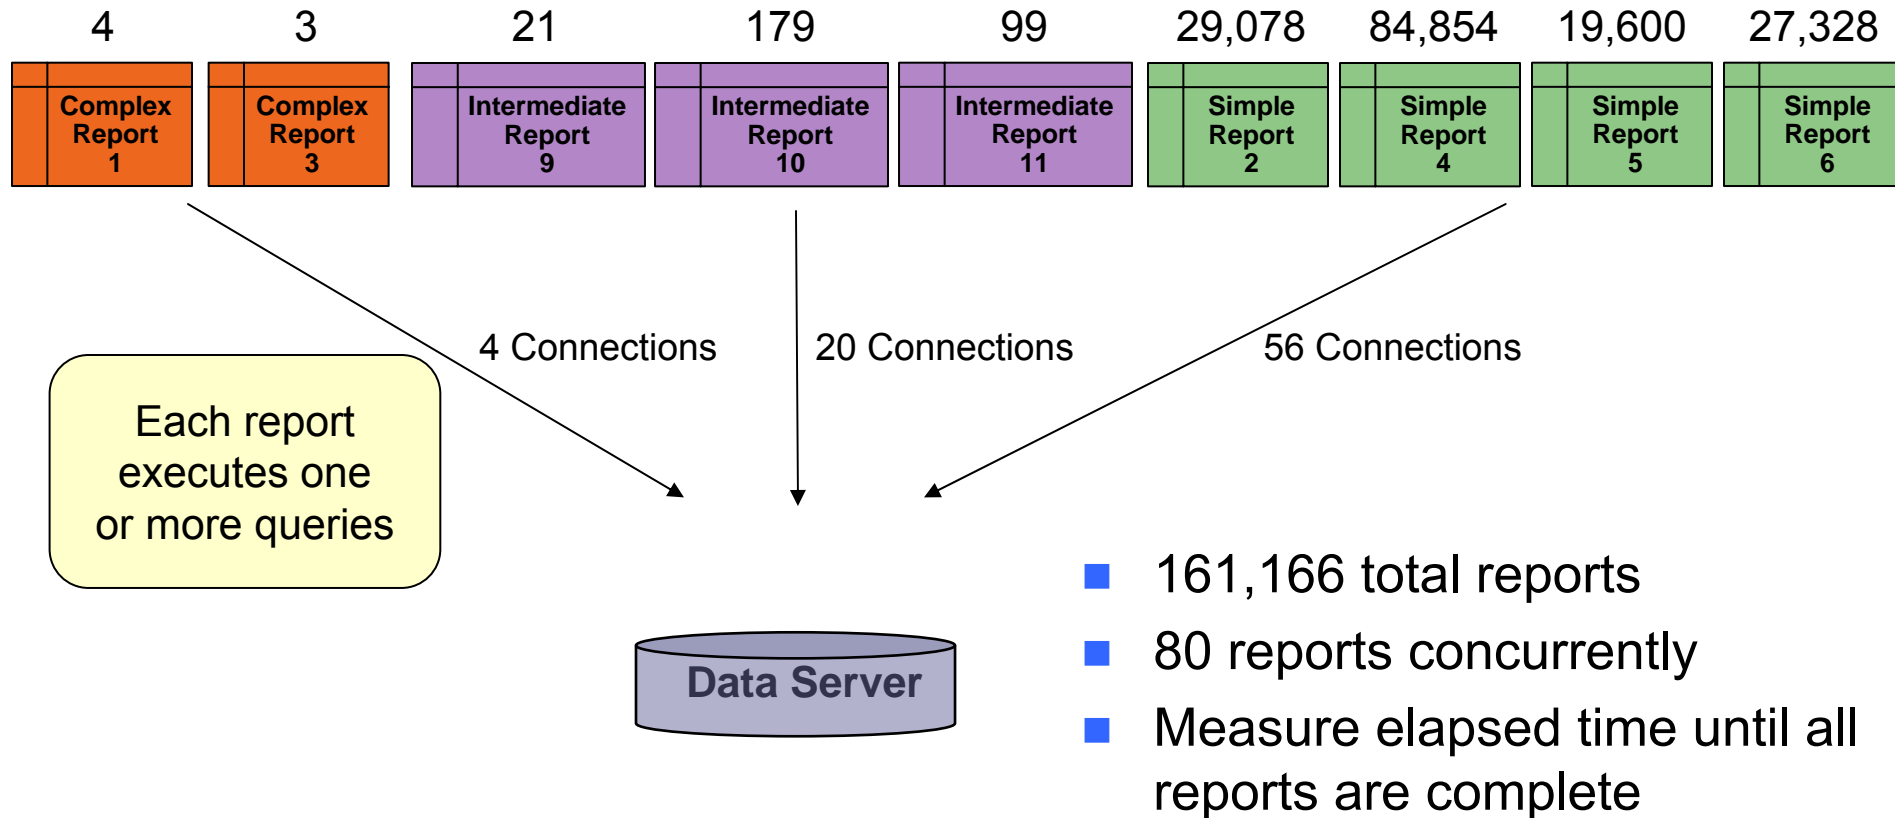

Cognos BI for System z “We didn’t have to justify a higher cost for putting this on the mainframe, *it was cheaper!*”

Intelligent Solutions, Inc.

Analyst Claudia Imhoff “the industry pendulum in swinging towards centralization and there is no better platform than the mainframe”

Example: BI Day Fixed-Set Operational Reports Run Concurrently On A Periodic Schedule

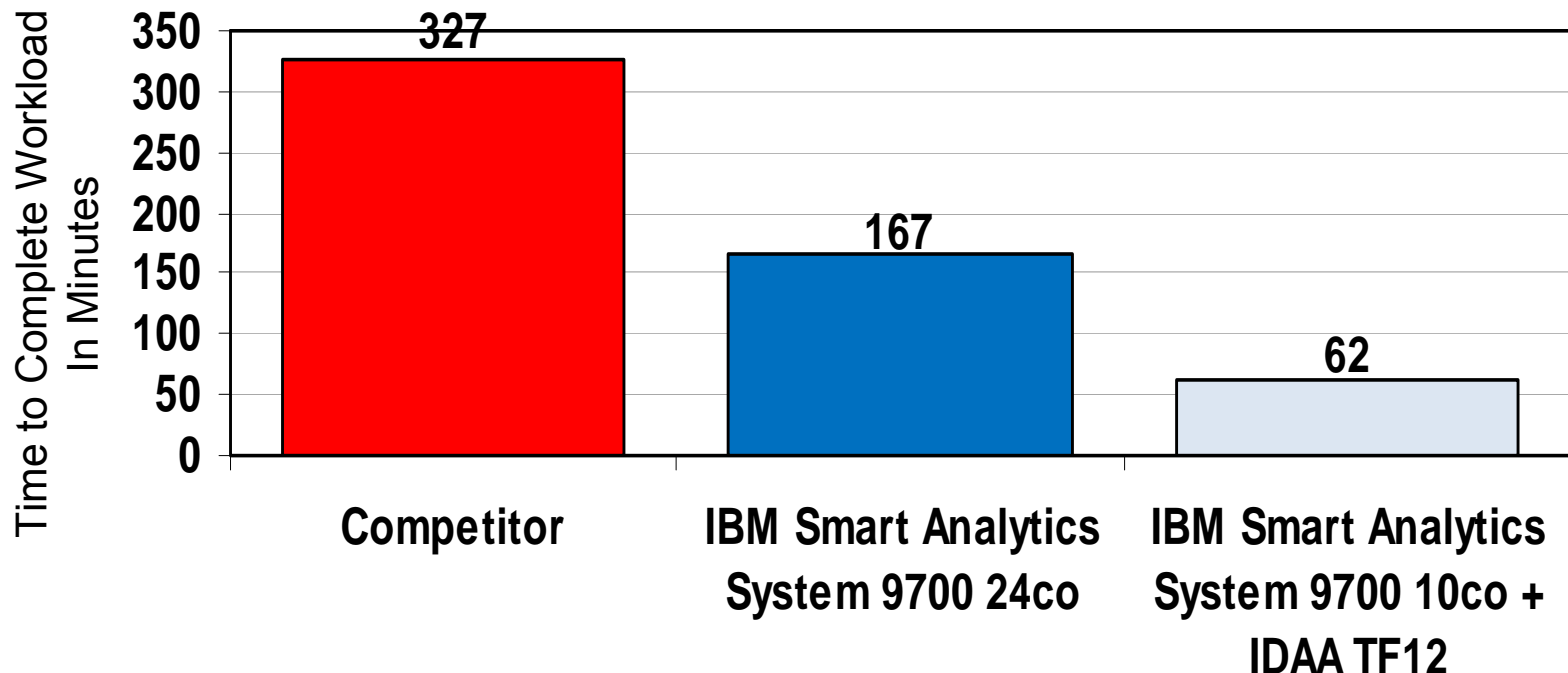

Note: Distribution of complex, intermediate, and simple workloads based on Forrester Research, Profiling the Analytic End User for Business Intelligence, 2004

BI Day Fixed-Set Operational Reports Run Concurrently On A Periodic Schedule

- CASE 1:
Run concurrently 160,860 simple reports and 306 intermediate and complex reports on Competitor 1/4 Rack
- CASE 2:
Run concurrently 160,860 simple reports and 306 intermediate and complex reports on IBM Smart Analytics System 9700 with dedicated 24-cores
- CASE 3:
Run concurrently 160,860 simple reports on IBM Smart Analytics System 9700 10-cores and in parallel offload 306 intermediate and complex reports serially to IDAA (Twinfin 12)

IBM DB2 Analytics Accelerator Makes A Great Analytics Solution Even Better

Time To Completion For Fixed Size Concurrent Workload – 1 TB

Lower is better

Test measures time to complete a fixed number of 161,166 concurrently executing reports

Based on BI Day Tests. Performance numbers may vary based on workload profiles. IBM Smart Analytics System + IDAA performance estimated from IBM Smart Analytics System running simple reports and NZ TF12 running intermediate + complex reports

Running Analytics On Optimized zEnterprise Platform Saves 75% Over Competition

Run End-To-End BI On zEnterprise To Reduce Costs And Improve Reliability

- 60-70% of operational data resides on System z*
- Copying data from System z to another platform for business intelligence
 - ▶ Is costly
 - ▶ Introduces security concerns
- zEnterprise offers a fully integrated, holistic solution from operational data to business analytics in one platform
- Consolidating data warehouses and data marts on IBM Smart Analytics 9700 with IDAA can reduce costs by 75%
