

Introducing New Skills To System z For Operations And Application Development

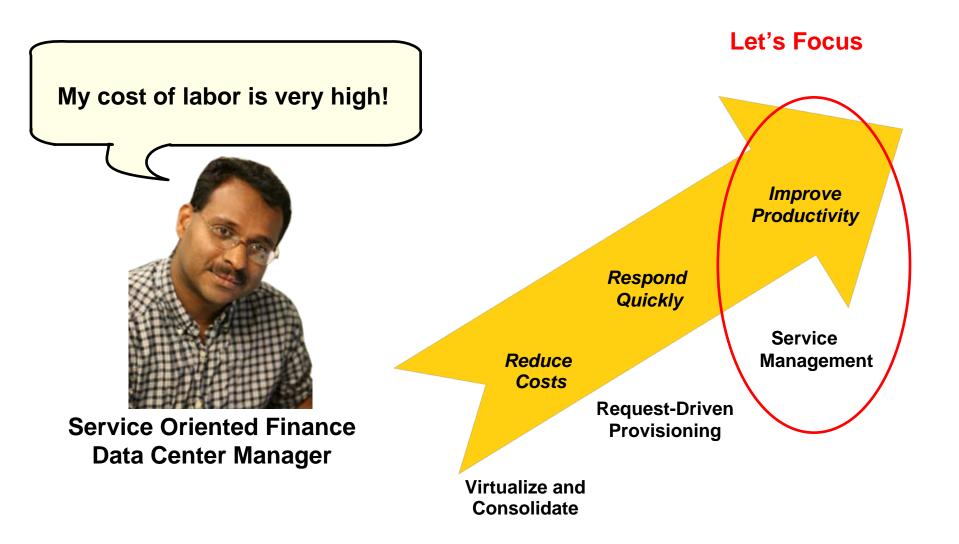

Fehmina Merchant and Jeff Miller

- SWG Competitive Project Office

Dynamic Infrastructure For A Smarter Planet

Data Centers Need A Service Management Hub To Meet Service Levels And Reduce Costs

Visibility

Control

Automation

See issues endto-end in business context Standardize IT processes and provide self-service

Automate repeating tasks to simplify

Respond faster and make better decisions

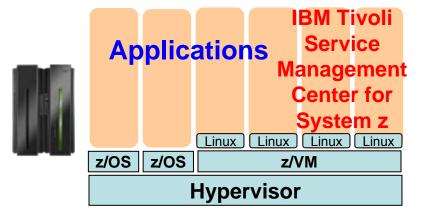

Improve quality and reduce mistakes

Lower costs and build agility

Solution: IBM Tivoli Service Management Center for System z

Mainframe As A Service Management Hub

- Consolidate management on the mainframe
 - Service Management hub on Linux on z
 - z/OS supported as a managed system

- Manage the Dynamic Infrastructure
 - Best practices
 - Productivity
 - Lowest Cost

Applications

Systems Management

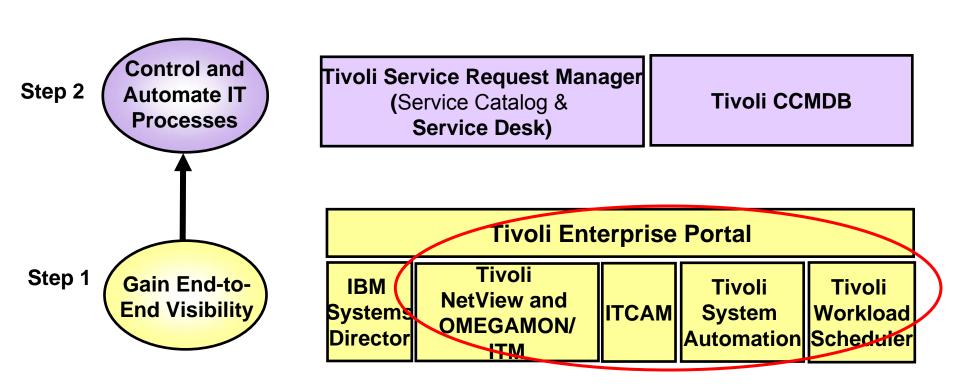

Clansgeidate

Fangel

Virtelatize

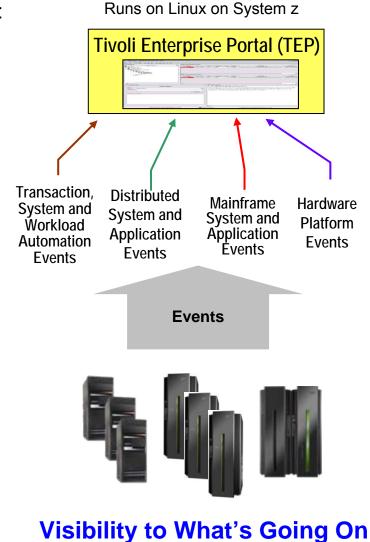

A Step By Step Approach To Implementing Tivoli Service Management Center For System z

Visibility... Control... Automation

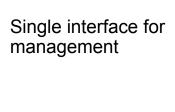

Tivoli Enterprise Portal (TEP) – A Common Monitoring Dashboard On System z

- Resource status/health from various event sources:
 - Hardware events from IBM Director
 - Mainframe events from Tivoli OMEGAMON
 - Distributed events from Tivoli Monitoring (ITM)
 - Transaction events from Tivoli Composite
 Application Manager (ITCAM)
 - System automation events from Tivoli System Automation (TSA)
 - Batch workload events from Tivoli Workload Scheduler (TWS)
 - Events from 3rd party monitors
- Detect incidents with situations
 - Out-of-the-box supplied situations include combination of metrics and thresholds
 - Built-in situation editor allows to customize
- Expert advice helps obtain detailed explanation and recommendation for resolution
- Take action to automatically resolve recurring problems with existing or customized scripts

End-To-End Visibility With Intelligent Monitoring

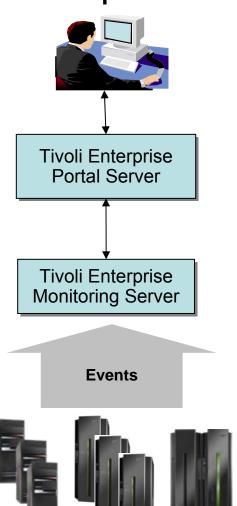

Tivoli Enterprise Portal (TEP)

Retrieval, manipulation and analysis of data

Collect and correlate monitoring data

Intelligent monitoring agents on systems send events

Runs on Linux on System z

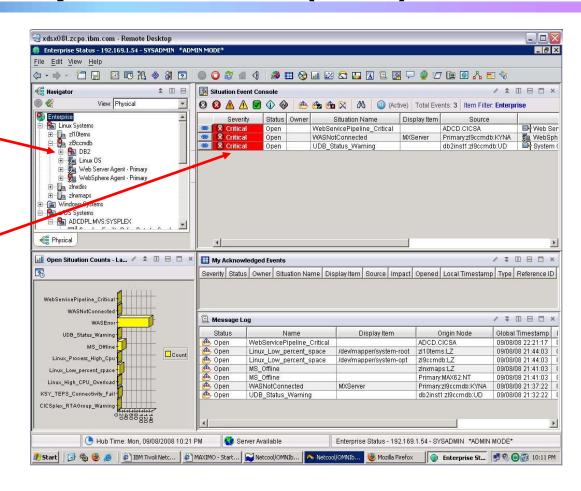

Runs on Linux on System z

Runs on Linux on System z and z/OS

DEMO: Tivoli Enterprise Portal (TEP)

- Monitor resources end-toend with workspaces
- Situations triggered by problems, for example:
 - CICS application not responding
 - DB2 application has issues

A Dynamic Role-based Portal for End-to-End Monitoring!

Tivoli NetView And Tivoli OMEGAMON XE – Monitor Mainframe Resources

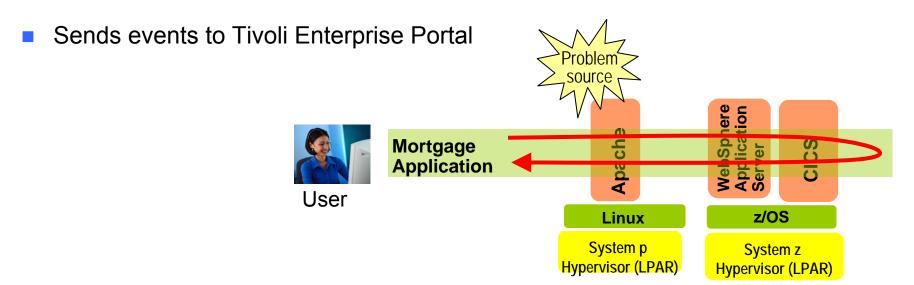

- Tivoli NetView and Tivoli OMEGAMON XE agents for mainframe servers
 - NetView on z/OS monitor and control TCP/IP and SNA networks to help maintain high availability
 - OMEGAMON XE on z/OS monitor key resources such as CPU, LPARs, I/O, network, enqueue, paging, zIIP, zAAP, Cryptoprocessors
 - OMEGAMON XE on z/VM and Linux monitor z/VM and Linux usage of resources such as CPU, network, storage
 - ► OMEGAMON XE for Mainframe Networks collect data and diagnose network performance issues across z/OS systems
 - OMEGAMON XE for DB2 PM/PE on z/OS monitor performance of DB2 in a z/OS environment
 - ► OMEGAMON XE for IMS on z/OS manage IMS systems
 - ► OMEGMAON XE for CICS on z/OS manage CICS systems

Tivoli Monitoring And Tivoli Composite Application Manager (ITCAM) – Monitor Distributed Resources

- Tivoli Monitoring and ITCAM agents for distributed servers
 - Tivoli Monitoring (base) monitor system resources such as CPU, I/O, network
 - ► ITCAM for Applications monitor system resources and virtual servers; monitors availability and performance of distributed databases such as DB2, Oracle, Sybase, IBM Domino, web servers and application servers, IBM WebSphere MQ and WebSphere Message Broker, SAP, Siebel and PeopleSoft
 - Tivoli Monitoring for Microsoft Applications monitors Microsoft environment

Tivoli Composite Application Manager (ITCAM) – End-To-End Transaction And SOA Management

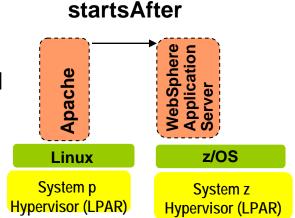

- Tracks transaction performance end-to-end across multiple physical and/or virtual systems to isolate bottlenecks quickly
 - ▶ Isolate source of performance problem across web servers, WebSphere and WebLogic application servers, CICS, IMS and DB2 subsystems, as well as ERP environments
- Monitors and performs simple control of message traffic between Web services in the SOA environment
 - Filter messages based on user-configurable criteria

Visibility to Track End-To-End Transactions

Tivoli System Automation (TSA) – Automate System Operations

- Automate operations on hardware, I/O and applications
- No Scripts, policy-based automation
- Can manage relationship between resources and grouping of resources to automate at application level
- Includes out-of-the-box automation modules for middleware such as IMS, CICS, DB2, mySAP, WebSphere

- Can enable end-to-end application startup and shutdown across System z and distributed platforms
- Sends events to Tivoli Enterprise Portal

Automate Routine Operations

Tivoli Workload Scheduler (TWS) – Batch Workload Automation

- Enables planning for hundreds of thousands of jobs, resolves interdependencies, launches and tracks each job
- Powerful calendar-based and event-based scheduling capabilities
- Automatic recovery of jobs
- Workload Manager (WLM) integration to optimize resource utilization and favor late critical jobs
- Provides a single point of control for System z workloads or enterprise-wide workloads in end-to-end environments
- Sends events to Tivoli Enterprise Portal

Linux z/OS System p System z

Hypervisor (LPAR)

Hypervisor (LPAR)

End-to-End Scheduling

Automate Job Scheduling

Control And Automate IT Processes

One of my key staff members is leaving.

My new employees don't have the experience to handle problems when they come up.

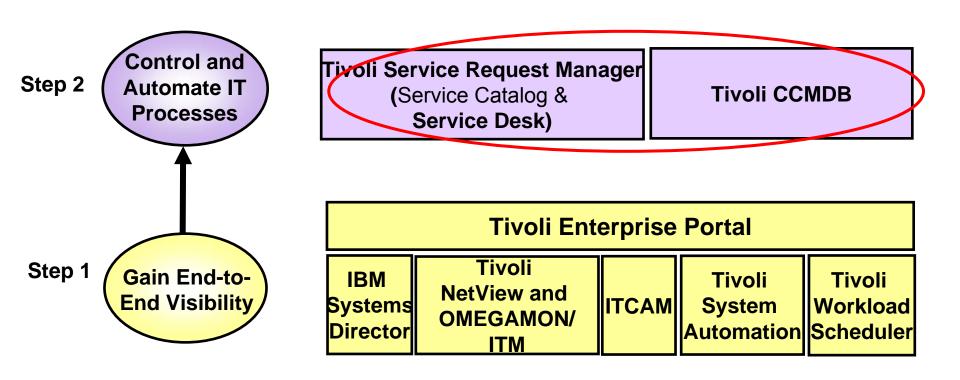

Data Center Manager

New Employee

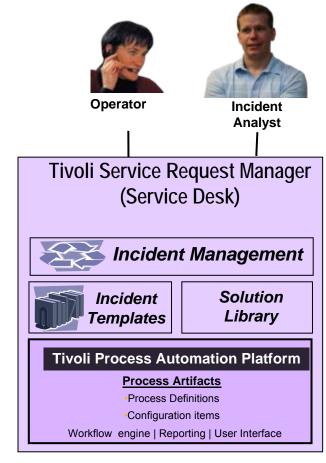

A Step By Step Approach To Implementing Tivoli Service Management Center For System z

Visibility... Control... Automation

Tivoli Service Request Manager (Service Desk) – Control Incident Management Process

- Central point to control service requests for help, information and service
- Create incident templates for common service desk calls and library of reusable solutions
 - Use templates to quickly create tickets
 - View updates and search library for solutions
- Automate incident management process
- Built on the common Tivoli Process Automation Platform to enable integration with other processes via common UI, common workflow engine, common database

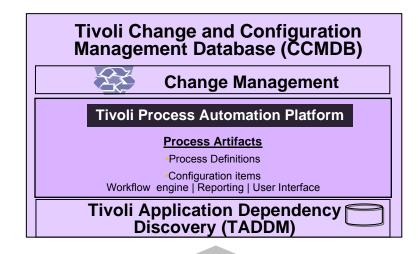

Runs on Linux on System z

Capture and Execute Best Practices

Tivoli Change And Configuration Management Database (CCMDB) – Discover And Manage Changes

- Discover assets and keep track of changes
 - Discovery library adapter for z/OS
 - 200 out-of-the-box sensors discover distributed resources
- Automated dependency mapping via application descriptors
 - Capture information about modules in business applications via descriptors
- Leverages common Tivoli Process Automation Platform to enable integration of change process with other processes
 - Common UI
 - Common workflow engine
 - Common database

Out-of-the-box Automated Discovery

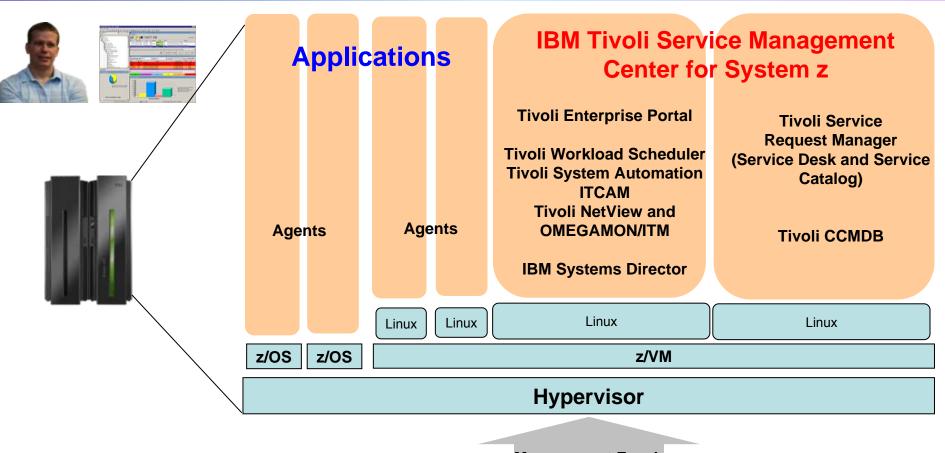

Auto Discover New Assets

Tivoli CCMDB – Control And Automate Change Management Process

- Associate change window with configuration items (managed assets)
 - Check for schedule conflicts
 - Prevent changes from occurring outside defined window
- Identify the impact of implementing a change
 - Identify and record impacted configuration items using discovered relationship data
 - Subject Matter Experts can document assessment results
 - Get Approvals from all stakeholders before implementing change
- Out-of-the-box best practices and customizable change management process

Mainframe As A Service Management Hub With Tivoli Service Management Center For System z

Management Focal Point

System Management Software Costs Less On A Consolidated zLinux Platform

Here are more cost savings...

It costs less to install system management software on zLinux than it does to install comparable software in the unconsolidated environment

IBM

Tivoli Or CA Solution Used To Manage 100 Distributed Linux Servers

100 Servers (200 PVU or Quad-core for each server)

3 authorized administrator licenses; 8 concurrent administrator licenses*

Tivoli CCMDB

Tivoli Service Request Manager

ITCAM for Applications

CA CMDB

OR

CA Change Manager

CA Service Desk

CA Unicenter (WebSphere, DB2)

Tivoli software total (5 yr): \$1,567,960

CA software total (5 yr): \$4,883,993

^{*}Customer case used as a basis – 1 authorized user per 40 servers , 1 concurrent user per 13 servers

Tivoli Or CA Software (Distributed) Pricing

Parts	1 st Year	2 ^{nd-} 5 th Year Maintenance
Tivoli CCMDB (base)	\$83,600	\$66,800
Tivoli CCMDB (VU)	\$50,000	\$40,000
Tivoli CCMDB (authorized user)	\$3,150	\$2520
Tivoli CCMDB (concurrent user)	\$21,040	\$16,800
TSRM (authorized user)	\$8,250	\$6,600
TSRM (concurrent user)	\$55,040	\$44,160
ITCAM for Applications (PVU)	\$650,000	\$520,000
TOTAL	\$871,080	\$696,880

Parts	1 st Year	2 ^{nd-} 5 th Year Maintenance
CA CMDB	\$50,000	\$40,000
CA CMDB Agent	\$100,000	\$80,000
CA Change Manager	\$10,000	\$8,000
CA Change Manager (user)	\$5385	\$4,308
CA Service Desk (user)	\$38,500	\$30,800
CA Unicenter (WebSphere, DB2)	\$2,509,400	\$2,007,600
TOTAL	\$2,713,285	\$2,170,708

5 year Tivoli Total: \$1,567,960

5 year CA Total: \$4,883,993

Tivoli Solution Used To Manage 100 Distributed Linux Servers w/TSA & TWS

100 Servers (200 PVU or Quad-core for each server)

3 authorized administrator licenses; 8 concurrent administrator licenses*

ITCAM for Applications (PVU)	\$78,000	\$62,400
Tivoli System Automation (PVU)	\$69,120	\$55,440
Tivoli Workload Scheduler (PVU)	\$79,200	\$63,360
TOTAL	\$342,740	\$274,280

Better Application Lifecycle Management (ALM) Across The Enterprise

My development teams support a variety of platforms that our applications span, especially System z. I need ALM tools that support *ALL* my platforms

Service Oriented Finance Development Manager

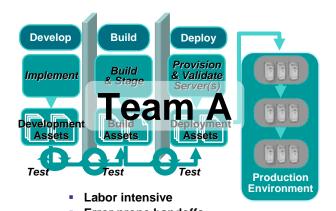

You can break down developer silos and close gaps between tiers with the Rational Change and Release Management tools

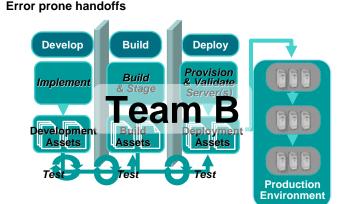

IBM

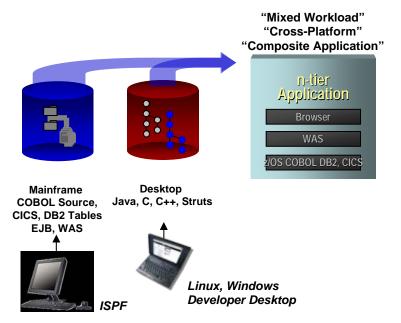

Change & Release Management Challenges

- Each team works separately
 - Difficult to track migrations and builds
 - No shared processes, artifacts or controls
 - "Over the wall" communication

- Mixed platforms/inconsistent functions
 - Parallel activities (new development, maintenance)
 - Inconsistent user interface & processes
 - Manual, heterogeneous build/deploy
 - Uncoordinated promotions & backout

IBM Rational Change and Release Management for System z Tools Address These Challenges

Rational ClearQuest

- Manages the activities of software delivery for any size team
 - Customizable, automated workflows

Rational ClearCase

- Enterprise repository to manage the artifacts of software delivery
 - Wide-range of cross-platform support

Rational Build Forge

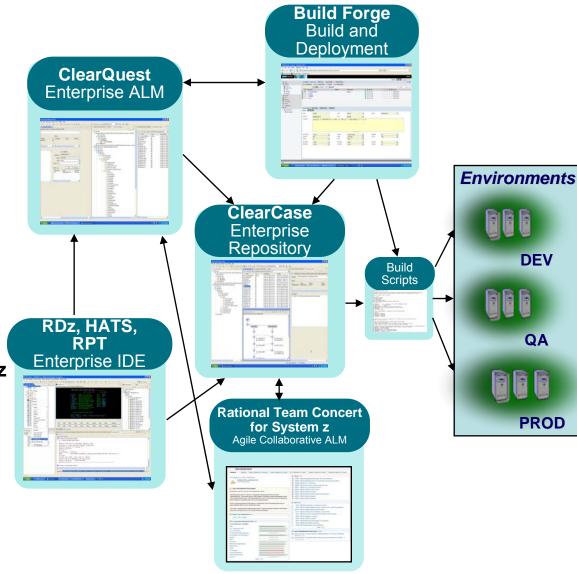

- Manages build and deployment across the enterprise
 - Automate & standardize software assembly processes

Rational Team Concert for System z

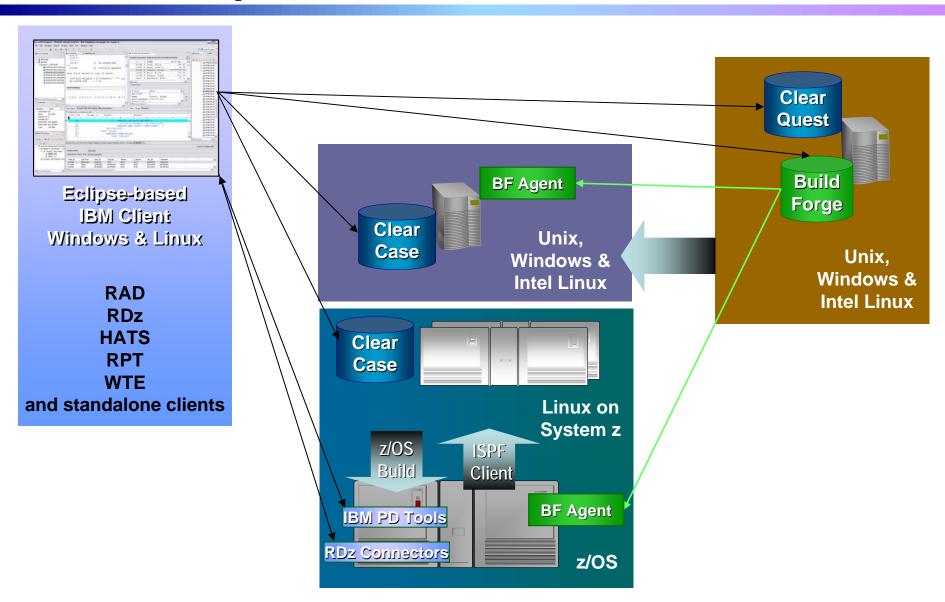

- Agile, strategic collaborative ALM for small/medium teams
 - Leverage your existing investments in the three tools above

Eclipse-based Enterprise IDE

 Integrated clients for all the development tools you need

The Enterprise Environment

Streamline Development With A Common Software Delivery Tool Set

My development teams work across platforms. I need to save money with a single integrated set of software tools

Service Oriented Finance Development Manager

Rational tools have a common look and feel to enable all team members to collaborate with a single strategic platform.
Let's see how

IBM

Use Tools To Quickly Reuse, Modernize And Test Code To Extend What You Already Have

Budgets are tight. I need tools that let me easily reuse, modernize and extend what I've got now using my existing staff

Service Oriented Finance Data Center Manager

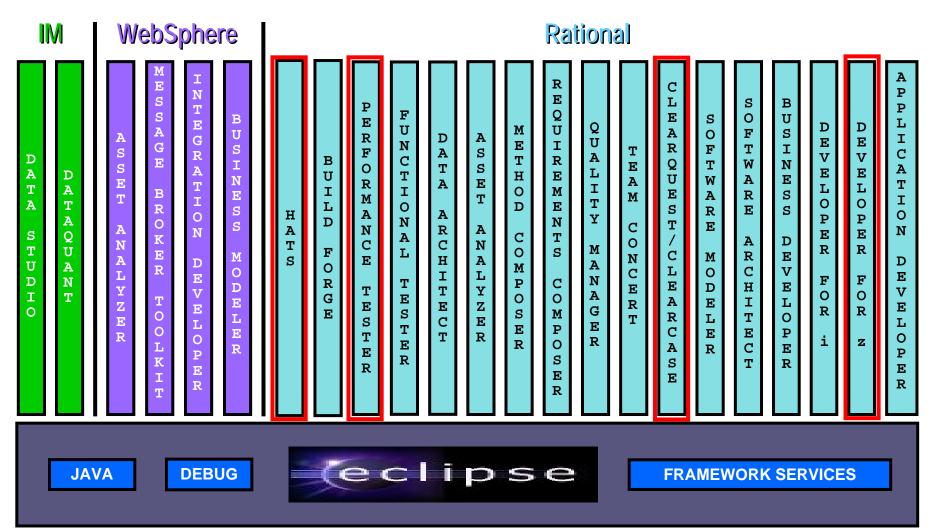

Let's see how easy it is to transform your 3270 green screens to make them available from a Web browser for quick ROI

IBM

The IBM Software Delivery Tools Are Built On Eclipse

A common platform provides a common Look and Feel for All tools

Extend Existing Applications With Minimal Cost Using HATS — Host Access Transformation Services

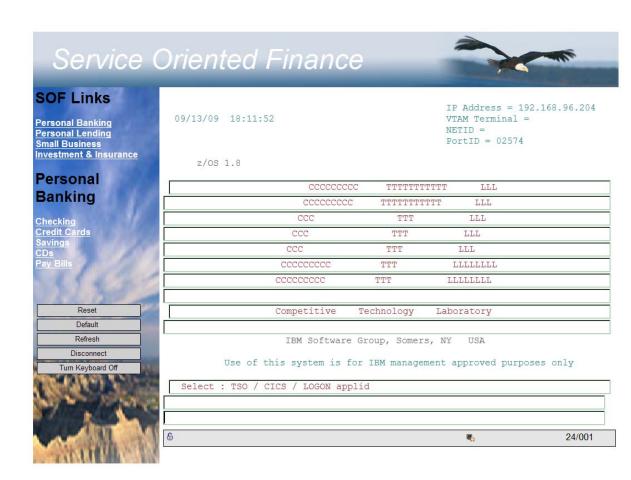

What can you do with HATS?

- Quickly and easily create Web, portal, mobile or rich client applications from your green-screen applications
 - Without programming
 - Low skills requirement
 - Transformation "on the fly"
 - Iterative development process
 - Highly customizable
- Reuse your existing assets
 - As Web services, in an SOA
- Create work flow from multiple apps
- Integrate with other Web, portal, and rich client applications

DEMO: HATS Green Screen Transformation

Let's look at the GUI development tooling and then see how easy it is to use HATS to take a green screen app and transform it into a Web application

There Are Efficient Ways To Extend Other Mainframe Assets As Web Services

Generate Web services code from proven assets to keep risk low in a Service-Oriented Architecture

- CICS Web services
- IMS Web services
- Java Web services
- CICS Service Flow Modeler
 - Supports CICS Service Flow Feature
 - Wizards to build service flows out of your existing
 COMMAREA-, WSDL-, and Terminal-based CICS applications
 - Then expose flows as Web services
- And more...

Testing Tools Are Built On The Same Platform

- Rational Functional Tester

- Also Eclipse-based
- Use Rational Functional Tester
 - Record/Enhance/Execute scripts on Windows/Linux

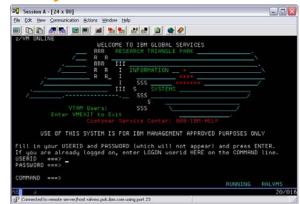

- Functional test any .NET, Web, or Java application (z or non-z)
- Use Rational Functional Tester
 Extension for Terminal-based
 Applications
 - Record/Enhance/Execute scripts on Windows
 - Functional test System z terminal based applications

.NET, Browser, Java UI

System z Terminal UI

Rational Performance Tester And Workload **Simulator**

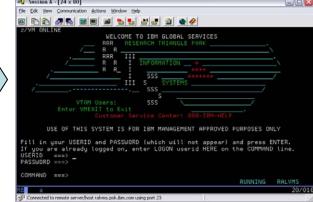

- Use Rational Performance Tester for z/OS
 - Develop scripts on Windows or Linux
 - Execute scripts on z/OS
 - Performance test any Web application (z or non-z)
- Use IBM Workload Simulator for z/OS and OS/390
 - Develop scripts on z/OS
 - Execute scripts on z/OS
 - Performance test any System z terminal application

Any Web Application

System z Terminal Application

Remove Barriers Between Mainframe And Non-Mainframe Programming

I need my mainframe programmers and distributed developers to use the same tools so they can help each other

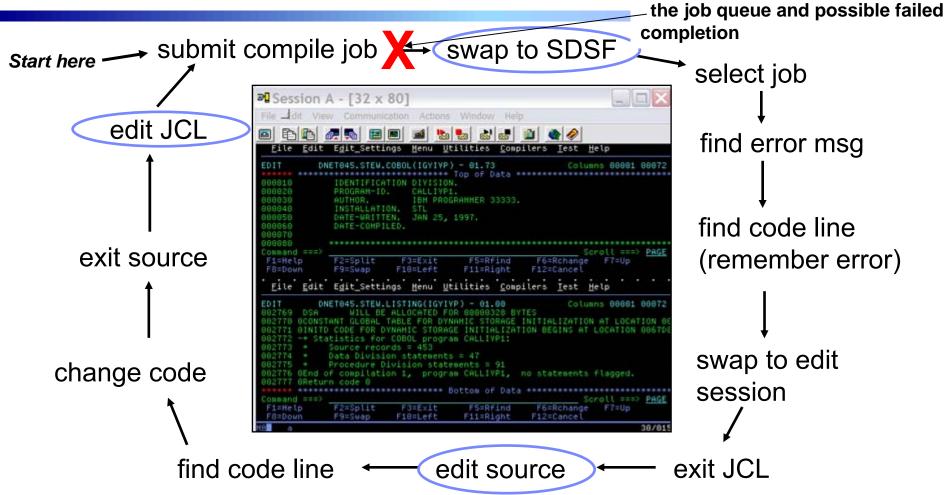

Service Oriented Finance Development Manager

The Rational tools enable end-to-end development and debugging helping to make all developers more efficient

IBM

In The Beginning, There Was ISPF
The "Green Screen"
Wait an indeterminate time for

- Programmer goes through a sequence of screens in order to get the job done
 - ▶ ISPF 3.4 listings, job listings, SDSF outputs, etc.
- Programmer is constantly flipping back and forth between these ISPF screens

Instead Use Rational Developer for System z To Work With Mainframe Assets Using A Modern Workstation-based Tool

What is RDz?

Eclipse-based IDE speeding modern mainframe application development

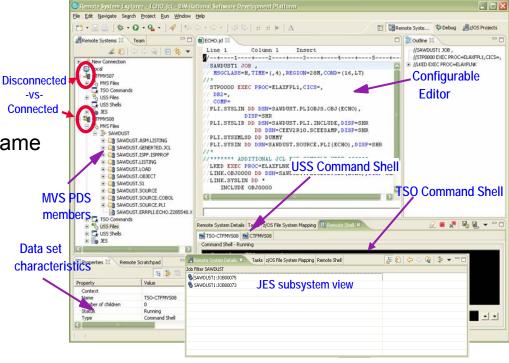

▶ One IDE for mainframe and non-mainframe

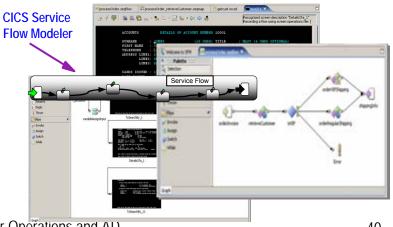

RDz supports Enterprise Modernization

- Support for COBOL, PL/I, C, C++, HLASM, Java, EGL and Web services
- Supports new and existing runtimes
 - CICS, IMS, Batch, USS, DB2, WAS
- Interactive access to z/OS for
 - Development, debug, job generation, submission, monitoring, command execution

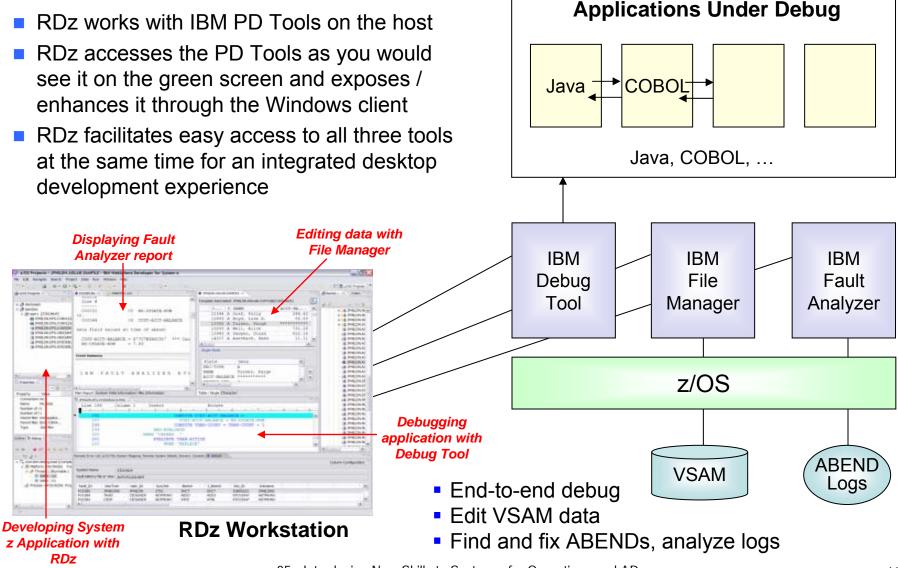

RDz supports SOA

- ▶ Enables CICS and IMS applications for Web services and SOA
- ▶ Supports for JEE, JCA, XML, Web services

Interactive Problem Determination: RDz Integrates With Host-based PD Tools

Summary

Manage your Dynamic Infrastructure with a Service Management hub to lower your costs, increase service levels and help you be more responsive

IBM
